Category 5 Volume 1

Introduction

Overview

Category 5 consists of messages which are exchanged among financial institutions involved in securities transactions.

Messages in this category include:

- trading instructions and confirmations
- settlement instructions and confirmations
- registration instructions and confirmations
- information about corporate actions and events
- capital and income advice
- statement and portfolio management information
- information about securities lending transactions
- information about collateral management transactions

There is also a special volume [Category 5 Securities Markets Message Usage Guidelines](#) explaining the use of the Trade Initiation and Confirmation messages and also the Settlement & Reconciliation and Corporate Action messages.

Changes

This volume incorporates the following changes to Category 5 - Securities Markets as noted in the Standards Release Guide (SRG) 2022 and the relevant updates to the SRG 2022:

- All Category 5 messages:
 - Add a new format option D with 140 characters to field 97a (Account) to be able to transport the blockchain address/wallet ID.
 - Add a new format option D with 30 decimals to field 36a (Quantity of Financial Instrument).
- MT 542, MT 543: Remove the code INTS in field 22F, qualifier STCO to correct SR 2021 implementation error.
- MT 537, MT 548:
 - Add a new qualifier (PREL) in field 36B (Quantity of Financial Instrument). Partial release is a new functionality that will allow a participant to release a delivery instruction for part of the original/remaining quantity. Adding a new qualifier informs the receiver of the remaining quantity to release.
 - Add a new code PATD (Partial Differ) to qualifiers PEND and PENF in field 24B (Reason Code). Whenever a matched instruction will be pending/failing and there is a mismatch on the partial settlement indicator, a settlement status will be provided to advice about this discrepancy.
 - Add a new qualifier CMIT (Counterparty Market Infrastructure Transaction Identification) to field 20C (Reference) in subsequence A1 LINK of all relevant MTs where qualifier MITI (Market Infrastructure Reference) is present today to allow indicating a MITI reference not only on client side, but also for counterparty.
- MT 540 - 543: Add a new format option C with 6 digits to the field 99a (Number Count) for the qualifier SETT and TOSE, to allow reporting up to 999999 allocations. An institution that places larger block trades (more than 999 child allocations) has validation issues today.

- MT 564:
 - Add new network validated rule on qualifiers MINP, MAXP in field 90a and on qualifier BIDI in field 92a in sequences D and E, to prevent presence of two MINP and MAXP prices simultaneously in different sequences.
 - Add qualifier FBIP and LBIP in field 90a in sequences D and E. Add new network validated rule on qualifier FBIP and LIBP in sequences D and E to enable full STP when non-standards bid range types are used for tender, repurchase offer, and dutch auction events.
 - Add code NDIS to OFFE qualifier in field 22F in sequence D to enable the reporting when dissenter's rights are not applicable to an event.
 - Amend definition of qualifier TNDP in field 22F in sequence D and make it repetitive, to enable provisioning the specific tax regulation identification governing an event to improve the routing of the announcement to the appropriate tax group within an organisation and to eliminate the need to use narrative to convey the tax regulation identification.
- MT 566: Make qualifier EXCH repetitive in field 92B in subsequence D2 to enable provisioning when several consecutive FX take place for income/proceeds (of a Corporate Action event) declared in a restricted currency.
- MT 564, MT 566:
 - Add code INCP to qualifier ADDB in field 22F in sequence D of MT 564 and in sequence C of MT 566. Add new network validated rule on code INCP of qualifier ADDB in field 22F in sequence D of MT 564 and on code CONS of qualifier CAEV in field 22F in sequence A of MT 564. Add new network validated rule on code INCP of qualifier ADDB in field 22F in sequence C of MT 566 and on code CONS of qualifier CAEV in field 22F in sequence A of MT 566, to correctly identify payment of incentive premium with CONS events related to votes lodged for a meeting (with incentive premium).
 - Add new repeatable qualifier OTYP in field 22F in subsequences E1 and E2 of MT 564 and in subsequences D1 and D2 of MT 566 to allow (for tax reporting purposes) notification of several income type codes (from different countries) for cash or securities proceeds of an event.
- MT 564, MT 568: Add new qualifier EPWI in field 70a in sequence D of MT 564 and add new qualifier PTNI in field 70a in sequence F of MT 564 and in sequence C of MT 568, to enable account servicers to provide specific instructions on events intended solely to their direct participants or clients.
- MT 567:
 - Add qualifier PTBA to field 93B in sequence B to enable provisioning the total protect instruction units in a separate balance as these units cannot be considered as instructed units.
 - Add code REJA and IPAW to qualifier REJT in field 24B in subsequence A2a and code IPAW to qualifier PEND in field 24B in subsequence A2a to enable the status reporting of a specific rejection code when agent rejects instructions for put events because the participant has not supplied the proper paperwork to the agent as back-up or because the agent rejects the put as it will end up being paid with the call/maturity payment.
- MT 527, MT 558, MT 569: Add an exposure type code to the field 22a, qualifier COLA. The exposure type code UDMS, Uncleared Derivative Margin Segregation, was added to triparty collateral management ISO 20022 messages and therefore it must be reverse engineered in ISO 15022.

SWIFT continually applies editorial enhancements to its documentation to improve quality and ensure consistency. These changes are not published but are controlled in order to ensure that they have no impact on FIN validation.

Important This volume contains information effective as of the November 2022 Standards release. Therefore the 23 July 2021 edition of the Standards MT User Handbook volumes remains effective until November 2022.

Volume Formatting Explanation

This volume of the Standards User Handbook set contains general information about the category and a detailed description of each message type which is currently available for use. For each message type, the following information is provided:

Message Type Scope

The scope specifies the Sender and Receiver of the message and provides an explanation on how the message is used. In some messages, an example of the message flow is also provided.

Message Type Format Specifications

The format specifications are the rules for the layout of the message type. This information is provided in table form with the following information:

MT nnn (Message Type Name)

Status	Tag	Qualifier	Generic Field Name	Detailed Field Name	Content/Options	No.
Mandatory Sequence A General Information						
M	16R			Start of Block	GENL	1
M	20C	SEME	Reference	Sender's Reference	:4!c//16x	2
M	23G			Function of the Message	4!c/[4!c]	3
O	98a	PREP	Date/Time	Preparation Date/Time	A or C	4
M	22F	TRTR	Indicator	Trade Transaction Type Indicator	:4!c/[8c]/4!c	5
-----> Repetitive Optional Subsequence A1 Linkages						
M	16R			Start of Block	LINK	6
O	13A	LINK	Number Identification	Linked Transaction	:4!c/3!c	7
M	20C	4!c	Reference	(see qualifier description)	:4!c//16x	8
M	16S			End of Block	LINK	9
----- End of Optional Subsequence A1 Linkages						
M	16S			End of Block	GENL	10

- **MT nnn (Message Type Name)** provides the message type number and name
- **Status** indicates if the field is
 - **M** = Mandatory
 - **O** = Optional - Network Validated Rules may apply

The status **M** for fields in optional (sub)sequences means that the field must be present if the (sub)sequence is present and is otherwise not allowed.

- **Tag** is the field identification.
- **Qualifier** specifies the qualifier to be used in the field. In cases where more than one qualifier may be used in a field, this column will be 4!c.
- **Generic Field Name** is the generic, that is, ISO 15022, name for the field. This column will be blank if the field is not a generic field.
- **Detailed Field Name** is the detailed name of the field tag, for this message type.
- **Content/Options** provides permitted field length and characteristics. For information concerning field structure, notation and character restrictions, see the [Standards MT General Information](#).
- **No.** identifies the number of the field in the Field Specifications for the message type.

Some messages are separated into sequences of fields, as shown above. An arrow indicates that a sequence of fields may be repeated.

MT Network Validated Rules

Network validated rules are validated on the network, that is, rules for which an error code is defined. Rules specified in this section affect more than one field in the message, placing a 'condition' on one of the fields specified. They are identified as **Cn**, or conditional rules.

MT Usage Rules

Usage rules are not validated on the network, that is, rules for which no error code is defined, but are nevertheless mandatory for the correct usage of the message. Rules specified in this section affect more than one field in the message, or more than one SWIFT message.

MT Guidelines

Guidelines are not validated on the network and are not mandatory for the correct usage of the message. They concern good practices. Guidelines specified in this section affect more than one field in the message, or more than one SWIFT message.

MT Field Specifications

The rules for the use of each field in the message are specified in this section. Each field is identified by its index number (as shown in the **No.** column of the MT Format Specifications), field tag and detailed field name, followed by a description of the field, which may contain some or all of the following:

- **FORMAT** specifies the field formats which are allowed for the field.
- **PRESENCE** indicates if the field is mandatory, optional or conditional in its sequence.
- **QUALIFIER** lists the qualifiers which may be used for the field. An explanation for reading the qualifier table may be found in the [Category 5 Securities Markets Message Usage Guidelines](#).
- **DEFINITION** specifies the definition of the field in the message type.
- **CODES** lists all codes available for use in the field. If there is more than one subfield for which codes are defined, each separate code list will be identified with a **CODES** heading. When a list of codes is validated by the network, the error code will be specified.
- **NETWORK VALIDATED RULES** specifies rules that are validated on the network, that is, rules for which an error code is defined. Generally, rules specified in this section affect only the field in which they appear. In some cases, rules which are validated at the message level, that is, rules which affect

more than one field, are repeated in this section. This is the case when the rule does not affect the presence of the field, but information within several fields, for example, a currency which must be the same for more than one field in the message.

- **USAGE RULES** specifies rules that are not validated on the network, that is, rules for which no error code is defined, but are nevertheless mandatory for the correct usage of the field. Rules specified in this section affect only the field in which they appear.
- **MARKET PRACTICE RULES** specifies rules published by the Securities Market Practice Group (SMPG). It informs the reader of the existence of a global market practice document on the business process in which the concerned field is used. The absence of a market practice rule notation does not mean that no market practices exist for the concerned field. The presence of a market practice rule is merely an indicator of a known market practice. Furthermore, readers should be aware that in addition to global market practices there may also be country-specific requirements that should be considered when using the field. For more details on SMPG market practice documentation, refer to www.smpg.info.
- **EXAMPLES** provides one or more examples of the field as it will be formatted/used.

MT Mapping

MT mapping provides an explanation of how to map the fields of the message into another SWIFT message, either of the same or a different message type.

MT Examples

Examples are provided to illustrate the correct use of a message. Examples always include the following information:

- **Narrative** provides a brief description of a transaction
- **Information Flow** illustrates the relationships between the parties involved in the message. An explanation of the flow diagram can be found in the [Standards MT General Information](#).
- **SWIFT Format** provides the message using the defined SWIFT format, and providing an explanation, where necessary, of the fields which have been used.

Category 5 Message Types

The following table lists all message types defined in Category 5.

For each message type, there is a short description, an indicator whether the message type is signed (Y/N), the maximum message length (2,000 or 10,000 characters) and whether the use of the message requires registration with SWIFT for use in a message user group (Y/N).

MT	MT Name	Purpose	Signed ⁽¹⁾	Max. Length	MUG

596	Answers	Responds to an MT 595 Queries or MT 592 Request for Cancellation or other message where no specific message type has been provided for the response	Y	2,000	N
598	Proprietary Message	Contains formats defined and agreed to between users and for those messages not yet live	Y	10,000	N
599	Free Format Message	Contains information for which no other message type has been defined	Y	2,000	N

(1) A Relationship Management Application (RMA) authorisation is required in order to sign a message.

Note

A Message User Group (MUG), for the purposes of this book, is a group of users who have voluntarily agreed to support the specified message type and have registered with SWIFT to send or receive the specified message type. These messages are indicated in the preceding table in the column MUG.

*Registration is free of charge. To register to use one or more message types, submit a registration request (**Order Message User Group**) through the forms available on www.swift.com > Ordering & Support > Ordering > Order Products and Services > Message User Group (MUG).*

*To withdraw from a MUG, use the **Terminate your MUG subscription** request. These forms are available at www.swift.com > Ordering & Support > Ordering > Terminate and deactivate > Message User Group (MUG).*

To get the list of other members of a particular MUG, please contact Support.

Euro - Impact on Category Message Standards

See the [Standards MT General Information](#) for full details of the Euro-Related Information (ERI) and the impact on Standards MT message types.

Securities Data Source Schemes

Use of Data Source Schemes (previously called Issuer Codes) in ISO 15022 Compliant Messages:

The data source scheme, [4!c[4c]], consists of two sub-fields:

- data source issuer code - where the purpose is to identify the institution issuing a proprietary code
- data source issuer sub-code - where the purpose is to explicitly identify the proprietary code in the case where a single institution issues more than one proprietary code for the same business purpose, for example, two codes for identification of parties.

Process

An initial list of valid data source schemes, assigned on a field-by-field basis, has been agreed with ISO.

Updates to this list will be agreed between the ISO 15022 Registration Authority (RA) and the ISO 15022 Registration Management Group (RMG).

The following principles have been agreed and will be applied:

1. Generic fields for which there is agreement that no current need exists for a data source scheme.

If an institution or market organisation requires the use of additional (proprietary) codes in one of these fields, they either have to request the RA to register new codes in the Data Dictionary, or they have to request a data source scheme from the RA. Such a request will need to be accompanied by a business justification of why they cannot use the standard codes. It is not the intention that every bank or institution should obtain a data source scheme. In case of appeal, the final decision will be taken by the Registration Management Group.

Example fields: Account, Balance, Date/Time, Place, Rate, Status Code, Number Identification

Note *For the number identification field, it is recommended to use the ISO standard for the transmission of certificate numbers (ISO 8532, Securities - Format for transmission of certificate numbers). If the ISO standard is followed, no data source scheme must be used. A data source scheme may only be used when an institution or market organisation wants to transmit proprietary certificate numbers.*

2. Generic fields for which there is agreement that an institution or market organisation may need to specify their proprietary scheme(s).

In this case the RA will assign a data source scheme to each institution or market organisation requesting a data source scheme, that is, the assignment will be less restricted than for the previously listed fields.

However, if an institution requests to register new codes in the Data Dictionary, the RA will not register the proprietary codes of each institution, but will translate and register any new business codes not already catered for within the ISO 15022 Standard.

Example fields: Indicator, Reason Code, Type of Financial Instrument

3. Generic fields for which there is agreement that the proprietary schemes for a specific list of institutions and market organisations may be used.

Example fields: Party

SWIFT is also reviewing the possibility of validating the data source scheme, that is, use of an invalid data source issuer code or issuer sub-code would cause the message to be NAKed.

Data Source Scheme list

The list of institutions or market organisations have already been assigned a data source scheme, only to be used with the indicated field as specified in the Data source Scheme list.

Consult www.swift.com or www.iso15022.org for the latest list.

Any additional Data Source Schemes or updates to the existing Data Source Schemes should be submitted for approval to the ISO 15022 Registration Authority. The official Data Source Scheme request form (Request for a new Data Source Scheme) can be found on the ISO 15022 web site (www.iso15022.org).

If you have any questions, contact the ISO 15022 Registration Authority Administrator:

MT 500 Instruction to Register

MT 500 Scope

This message is sent by an account owner to an account servicer (account servicing institution). The account owner may be a global custodian which has an account with its local agent (sub custodian), a local agent (sub custodian) which has an account with its clearing agent, or a registration provider or a financial institution which has an account with its local agent (sub custodian).

This message is used to:

- instruct the registration, deregistration or reregistration of a financial instrument at the registration provider,
- request the cancellation of a registration instruction previously sent by the account owner (the function of the message is CANC).

The registration instruction may be linked to other settlement instructions, for example, in case the settlement does not take place before the registration process is finished, using the linkages sequence.

MT 500 Network Validated Rules

- C1** If the message is a cancellation, that is, Function of the Message (field 23G) is CANC, then subsequence A1 (Linkages) must be present at least once in the message, and in one and only one occurrence of A1, field :20C::PREV must be present; consequently, in all other occurrences of A1, field :20C::PREV is not allowed (Error code(s): E08).

Sequence A if field :23G: is ...	Then subsequence A1 is ...	And field :20C::PREV is ...
CANC	Mandatory (minimum one occurrence of A1 must be present)	Mandatory in one occurrence of subsequence A1, and not allowed in all other occurrences of subsequence A1
NEWM	Optional	Not applicable

MT 500 Usage Rules

- When the message is used as a cancellation, the linkage sequence must contain the reference of the original instruction.
- The Identification of Financial Instrument in sequence B Registration Instruction Details identifies the financial instrument to be registered. The Identification of Financial Instrument in sequence D Corporate Action Details identifies subscription rights or exercise warrants from a corporate action.

MT 500 Field Specifications

MT 500 - 1. Field 16R: Start of Block

Format

Option R

16c

Presence

Mandatory in mandatory sequence A

Definition

This field specifies the start of a block and the name of that block.

Codes

This field must contain the following code (Error code(s): T92):

GENL General Information

MT 500 - 2. Field 20C: Reference: Sender's Message Reference

Format

Option C :4!c//16x (Qualifier) (Reference)

Presence

Mandatory in mandatory sequence A

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	M	SEME	N		C	Sender's Message Reference

Definition

This qualified generic field specifies:

SEME Sender's Message Reference assigned by the Sender to unambiguously identify the message.

Network Validated Rules

Reference must not start or end with a slash '/' and must not contain two consecutive slashes '/' (Error code(s): T26).

MT 500 - 3. Field 23G: Function of the Message

Format

Option G 4!c[/4!c] (Function) (Subfunction)

Presence

Mandatory (referenced in rule C1) in mandatory sequence A

Definition

This field identifies the function of the message.

Codes

Function must contain one of the following codes (Error code(s): T86):

CANC	Cancellation Request	Message requesting the cancellation of a previously sent message.
NEWM	New	New message.

Codes

Subfunction, when present, must contain one of the following codes (Error code(s): T85):

CODU	Copy Duplicate	Message is a copy to a party other than the account owner/account servicer, for information purposes and the message is a duplicate of a message previously sent.
COPY	Copy	Message is a copy to a party other than the account owner/account servicer, for information purposes.
DUPL	Duplicate	Message is for information/confirmation purposes. It is a duplicate of a message previously sent.

Usage Rules

To cancel a previously sent message, Function is CANC. The reference in the linkages sequence must contain the Sender's reference of the message to be cancelled. A copy of at least the mandatory fields of the message to be cancelled must be present; optional fields need not be present for SWIFT validation.

MT 500 - 4. Field 98a: Date/Time: Preparation Date/Time

Format

Option A	:4!c//8!n	(Qualifier) (Date)
Option C	:4!c//8!n6!n	(Qualifier) (Date) (Time)

4	O	RREA	N		F	Registration Reason Indicator

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
5	O	CERT	N		F	Certification Booking Indicator

Definition

This qualified generic field specifies:

ADMT	Type of Admittance	Specifies whether the appropriate form was signed by the beneficial owner or investor and whether the admittance was given.
BENT	Type of Beneficial Owner	Specifies the type of beneficial owner.
CERT	Certification Booking Indicator	Specifies whether the certificate/title should stay with the registrar/register.
OWNT	Type of Ownership Indicator	Specifies how a beneficial owner or investor owns the financial instrument.
RREA	Registration Reason Indicator	Specifies the reason for the registration processing.

Codes

If Qualifier is OWNT and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

NOMI	Nominee Name	Financial instruments are held in nominee name.
OWNE	Own Name	Financial instruments are held in the beneficial owner's own name, self-ownership.
TRUS	Trustee/Third Party	Financial instruments are held by a trustee, in third-party ownership.

Codes

If Qualifier is BENT and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

INDV	Individual	Individual or natural person.
LEGL	Legal Entity	Legal Entity.

Codes

If Qualifier is ADMT and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

GIVE	Admittance Given	Admittance was given by the investor.
NGIV	No Admittance Given	Admittance was not given by the investor.

TIME	One Time Admittance	Admittance was given by the investor for one time registration.
------	------------------------	---

Codes

If Qualifier is RREA and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

BEAR	Bearer Share Exchange	Exchange from registered shares into bearer shares.
BONU	Bonus Issue	Bonus or capitalisation issue. Security holders receive additional assets free of payment from the issuer, in proportion to their holding.
CAPG	Capital Gains Distribution	Distribution of profits resulting from the sale of securities. Shareholders of mutual funds, unit trusts, or sicavs may be recipients of capital gains distributions which are often reinvested in additional equity of the fund.
DVCA	Cash Dividend	Distribution of cash to shareholders, in proportion to their equity holding. Ordinary dividends are recurring and regular. Shareholder must take cash and may be offered a choice of currency.

Option C	:4!c//8!n6!n	(Qualifier) (Date) (Time)

Presence

Optional in mandatory sequence B

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	RREG	N		A or C	Requested Registration Date/Time

Definition

This qualified generic field specifies:

RREG	Requested Registration Date/ Time	Date/time at which the financial instruments are to be registered.
------	---	--

Network Validated Rules

Date must be a valid date expressed as YYYYMMDD (Error code(s): T50).

Time must be a valid time expressed as HHMMSS (Error code(s): T38).

MT 500 - 16. Field 35B: Identification of the Financial Instrument

Format

Option B	[ISIN!e12!c] [4*35x]	(Identification of Security) (Description of Security)
----------	-------------------------	---

Presence

Mandatory in mandatory sequence B

Definition

This field identifies the financial instrument.

Network Validated Rules

At least Identification of a Security (Subfield 1) or Description of Security (Subfield 2) must be present; both may be present (Error code(s): T17).

ISIN is used at the beginning of Identification of Security (Subfield 1) and must be composed of uppercase letters only (Error code(s): T12).

Usage Rules

When used in Description of Security (Subfield 2), codes must start and end with a slash '/'.

When an ISIN identifier is not used it is strongly recommended that one of the following codes be used as the first characters of the Description of Security (Subfield 2):

- [/2!a/] The ISO two-digit country code, followed by the national scheme number.
- [/TS/] Followed by the ticker symbol.
- [/XX/] Bilaterally agreed or proprietary scheme which may be further identified by a code or short description identifying the scheme used.
- [/4!c/] Code identifying the type of security identifier used. This code must be one published by ISO 20022 (ExternalFinancialInstrumentIdentificationTypeCode).

It is strongly recommended that the ISIN be used.

MT 500 - 17. Field 70C: Narrative: Registration Details

Format

Option C :4!c//4*35x (Qualifier) (Narrative)

Presence

Optional in mandatory sequence B

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	REGI	N		C	Registration Details

Definition

This qualified generic field specifies:

REGI Registration Details Provides details on registration not included within the structured fields of this message.

Usage Rules

Unless bilaterally agreed between the Sender and the Receiver, narrative field 70a must not contain information that can be provided in a structured field.

MT 500 - 18. Field 16R: Start of Block

Format

Option R 16c

Presence

Mandatory in optional subsequence B1

Definition

This field specifies the start of a block and the name of that block.

Codes

This field must contain the following code (Error code(s): T92):

FIA Financial Instrument Attributes

MT 500 - 19. Field 94B: Place: Place of Listing

Format

Option B :4!c/[8c]/4!c[/30x] (Qualifier) (Data Source Scheme) (Place Code) (Narrative)

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	PLIS	N		B	Place of Listing

Definition

This qualified generic field specifies:

PLIS Place of Listing Place where the referenced financial instrument is listed.

Codes

If Data Source Scheme is not present, Place Code must contain one of the following codes (Error code(s): K94):

EXCH Stock Exchange Place of listing is a stock exchange.

OTCO Over The Counter Place of listing is over the counter.

Network Validated Rules

Narrative must not start or end with a slash '/' and must not contain two consecutive slashes '/' (Error code(s): T26).

Usage Rules

Place of Listing is to be identified by its Market Identifier Code (MIC).

Example

:94B::PLIS//EXCH/XNYS.

MT 500 - 20. Field 22F: Indicator

Format

Option F :4!c/[8c]/4!c (Qualifier)(Data Source Scheme)
 (Indicator)

Presence

Optional in optional subsequence B1

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	MICO	N		F	Method of Interest Computation Indicator
2	O	FORM	N		F	Form of Securities Indicator
3	O	PFRE	N		F	Payment Frequency Indicator
4	O	PAYS	N		F	Payment Status Indicator
5	O	REST	N		F	Restrictions Indicator

Definition

This qualified generic field specifies:

FORM	Form of Securities Indicator	Specifies the form of the financial instrument.
MICO	Method of Interest Computation Indicator	Specifies the computation method of (accrued) interest of the financial instrument.
PAYS	Payment Status Indicator	Specifies the status of the payment of a financial instrument at a particular time, as agreed with the issuer.
PFRE	Payment Frequency Indicator	Specifies the frequency of a payment.
REST	Restrictions Indicator	Specifies the regulatory restrictions applicable to a financial instrument.

Codes

If Qualifier is MICO and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

A001	30/360 (ISDA) or 30/360 (American Basic Rule)	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February, and provided that the interest period started on a 30th or a 31st. This means that a 31st is assumed to be a 30th if the period started on a 30th or a 31st and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). It is the most commonly used 30/360 method for US straight and convertible bonds.
A002	30/365	Method whereby interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and a 365-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th).
A003	30/Actual	Method whereby interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and the assumed number of days in a year in a way similar to the Actual/Actual (ICMA). Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). The assumed number of days in a year is computed as the actual number of days in the coupon period multiplied by the number of interest payments in the year.
A004	Actual/360	Method whereby interest is calculated based on the actual number of accrued days in the interest period and a 360-day year.
A005	Actual/365 (Fixed)	Method whereby interest is calculated based on the actual number of accrued days in the interest period and a 365-day year.
A006	Actual/Actual (ICMA)	Method whereby interest is calculated based on the actual number of accrued days and the assumed number of days in a year, that is, the actual number of days in the coupon period multiplied by the number of interest payments in the year. If the coupon period is irregular (first or last coupon), it is extended or split into quasi interest periods that have the length of a regular coupon period and the computation is operated separately on each quasi interest period and the intermediate results are summed up.
A007	30E/360 or Eurobond basis	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be equivalent to a 30 Feb. However, if the last day of the maturity coupon period is the last day of February, it will not be assumed to be a 30th. It is a variation of the 30/360 (ICMA) method commonly used for eurobonds. The usage of this variation is only relevant when the coupon periods are scheduled to end on the last day of the month.
A008	Actual/Actual (ISDA)	Method whereby interest is calculated based on the actual number of accrued days of the interest period that fall on a normal year, divided by 365, added to the actual number of days of the interest period that fall on a leap year, divided by 366.

A009	Actual/365L or Actual/Actual (basic rule)	Method whereby interest is calculated based on the actual number of accrued days and a 365-day year (if the coupon payment date is NOT in a leap year) or a 366-day year (if the coupon payment date is in a leap year).
A010	Actual/Actual (AFB)	Method whereby interest is calculated based on the actual number of accrued days and a 366-day year (if 29 Feb falls in the coupon period) or a 365-day year (if 29 Feb does not fall in the coupon period). If a coupon period is longer than one year, it is split by repetitively separating full year sub-periods counting backwards from the end of the coupon period (a year backwards from a 28 Feb being 29 Feb, if it exists). The first of the sub-periods starts on the start date of the accrued interest period and thus is possibly shorter than a year. Then the interest computation is operated separately on each sub-period and the intermediate results are summed up.
A011	30/360 (ICMA) or 30/360 (basic rule)	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). It is the most commonly used 30/360 method for non-US straight and convertible bonds issued before 01/01/1999.
A012	30E2/360 or Eurobond basis model 2	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for the last day of February whose day of the month value shall be adapted to the value of the first day of the interest period if the latter is higher and if the period is one of a regular schedule. This means that a 31st is assumed to be a 30th and the 28th Feb of a non-leap year is assumed to be equivalent to a 29th Feb when the first day of the interest period is a 29th, or to a 30th Feb when the first day of the interest period is a 30th or a 31st. The 29th Feb of a leap year is assumed to be equivalent to a 30th Feb when the first day of the interest period is a 30th or a 31st. Similarly, if the coupon period starts on the last day of February, it is assumed to produce only one day of interest in February as if it was starting on a 30th Feb when the end of the period is a 30th or a 31st, or two days of interest in February when the end of the period is a 29th, or 3 days of interest in February when it is the 28th Feb of a non-leap year and the end of the period is before the 29th.
A013	30E3/360 or Eurobond basis model 3	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be equivalent to a 30 Feb. It is a variation of the 30E/360 (or Eurobond basis) method where the last day of February is always assumed to be a 30th, even if it is the last day of the maturity coupon period.
A014	Actual/365NL or Actual/365 No Leap	Method whereby interest is calculated based on the actual number of accrued days in the interest period, excluding any leap day from the count, and a 365-day year.
OTHR	Other	Other method than A001-A014. See Narrative.

Codes

If Qualifier is FORM and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

BEAR	Bearer Security	Financial instruments are in bearer form.
REGD	Registered Security	Financial instruments are in registered form.

Codes

If Qualifier is PFRE and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

ANNU	Annual	Payment frequency is annual.
MNTH	Monthly	Payment frequency is monthly.
QUTR	Quarterly	Payment frequency is quarterly.
SEMI	Semi-Annual	Payment frequency is semi-annual.
WEEK	Weekly	Payment frequency is weekly.

Codes

If Qualifier is PAYS and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

FULL	Fully Paid	Financial instrument is fully paid.
NILL	Nil Paid	Financial instrument is nil paid.
PART	Partially Paid	Financial instrument is partially paid.

Codes

If Qualifier is REST and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

144A	Pursuant to 144A	Ownership or transfer of an unregistered security issued, pursuant to US legal restrictions 144A.
NRST	Not Subject to Restrictions	Ownership or transfer of a security that is not subject to restrictions.
RSTR	Subject to Restrictions (not pursuant to 144A)	Ownership or transfer of a security that is subject to restrictions, and not pursuant to 144A.

MT 500 - 21. Field 12a: Type of Financial Instrument

Format

Option A	:4!c/[8c]/30x	(Qualifier) (Data Source Scheme) (Instrument Code or Description)
Option B	:4!c/[8c]/4!c	(Qualifier) (Data Source Scheme) (Instrument Type Code)
Option C	:4!c//6!c	(Qualifier) (CFI Code)

Presence

Optional in optional subsequence B1

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	CLAS	N		A or C	Classification Type
2	O	OPST	N		B	Option Style
3	O	OPTI	N		B	Option Type

Definition

This qualified generic field specifies:

CLAS	Classification Type	Classification type of the financial instrument, for example, ISO Classification of Financial instrument (CFI).
OPST	Option Style	Specifies how an option can be exercised.
OPTI	Option Type	Specifies whether it is a call option or a put option.

Codes

In option B, if Qualifier is OPST and Data Source Scheme is not present, Instrument Type Code must contain one of the following codes (Error code(s): K12):

AMER	American Style	Option can be exercised before or on expiry date.
EURO	European Style	Option can be exercised on expiry date only.

Codes

In option B, if Qualifier is OPTI and Data Source Scheme is not present, Instrument Type Code must contain one of the following codes (Error code(s): K12):

CALL	Call Option	A right to buy a defined quantity of an asset by a certain date at an agreed price.
PUTO	Put Option	A right to sell a defined quantity of an asset by a certain date at an agreed price.

Usage Rules

CFI code must contain a valid ISO CFI code.

To use the codes associated with the ISITC code for security type, /ASCT/, Data Source Scheme must be ISIT and Instrument Code or Description must contain a valid ISITC security type code.

Example

:12C::CLAS//ESVUFR (CFI code for equity, common share, voting rights, unrestricted, fully paid and registered).

7	O	PUTT	N		A	Put Date
8	O	DDTE	N		A	Dated Date
9	O	FCOU	N		A	First Coupon Date

Definition

This qualified generic field specifies:

CALD	Call Date	Date on which a financial instrument is called away/redeemed before its scheduled maturity date.
COUP	Coupon Date	Next payment date of an interest bearing financial instrument.
DDTE	Dated Date	Date on which an interest bearing financial instrument begins to accrue interest.
EXPI	Expiry Date	Date on which an order expires or on which a privilege or offer terminates.
FCOU	First Coupon Date	First payment date of an interest bearing financial instrument.
FRNR	Floating Rate Note Reset Date	Date on which the interest rate of an interest bearing financial instrument will be or was calculated and reset, according to the terms of the issue.
ISSU	Issue Date	Date on which the financial instrument is issued.
MATU	Maturity Date	Date on which a financial instrument becomes due and assets are to be repaid.
PUTT	Put Date	Date on which a holder of a financial instrument has the right to request redemption of the principal amount prior to its scheduled maturity date.

Network Validated Rules

Date must be a valid date expressed as YYYYMMDD (Error code(s): T50).

MT 500 - 24. Field 92A: Rate

Format

Option A :4!c//[N]15d (Qualifier) (Sign) (Rate)

Presence

4	O	INTR	N		A	Interest Rate
5	O	NXRT	N		A	Next Interest Rate
6	O	YTMR	N		A	Yield To Maturity Rate

Definition

This qualified generic field specifies:

CUFC	Current Factor	Rate expressed as a decimal between 0 and 1 defining the outstanding principal of the financial instrument (for factored securities).
INTR	Interest Rate	Annualised interest rate of a financial instrument used to calculate the actual interest rate of the coupon or the accrued interest.
NWFC	Next Factor	Rate expressed as a decimal between 0 and 1 that will be applicable as of the next factor date and defines the outstanding principal of the financial instrument (for factored securities).
NXRT	Next Interest Rate	Interest rate applicable to the next interest payment period in relation to variable rate instruments.
PRFC	Previous Factor	Rate expressed as a decimal between 0 and 1 that was applicable before the current factor and defines the outstanding principal of the financial instrument (for factored securities).
YTMR	Yield To Maturity Rate	Rate of return anticipated on a bond when held until maturity date.

Network Validated Rules

The integer part of Rate must contain at least one digit. The decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).

If Rate is zero, Sign must not be present (Error code(s): T14).

Usage Rules

Sign must be present when Rate is negative.

Except if notified differently in the rate definition, when used with format option A (:4!c//[N]15d), the rate must be expressed as a percentage, not as a decimal fraction (12% must be identified by 12, and not 0,12).

3	O	PUTT	N		B	Puttable Flag

Definition

This qualified generic field specifies:

CALL	Callable Flag	Indicates whether the issuer has the right to repay the financial instrument prior to maturity.
FRNF	Floating Rate Note Flag	Indicates whether the interest rate of an interest bearing instrument is reset periodically.
PUTT	Puttable Flag	Indicates whether the holder has the right to ask for redemption of the financial instrument prior to final maturity.

Codes

Flag must contain one of the following codes (Error code(s): K17):

N	No	No.
Y	Yes	Yes.

MT 500 - 27. Field 90a: Price

Format

Option A :4!c//4!c/[N]15d (Qualifier) (Percentage Type Code) (Sign) (Price)

Option B :4!c//4!c/3!a15d (Qualifier) (Amount Type Code) (Currency Code) (Price)

Definition

This qualified generic field specifies:

EXER	Exercise Price	<ol style="list-style-type: none"> Price at which the security will be purchased/sold if warrant is exercised, represented either as an actual amount (option B) or a percentage (option A). Price at which a bond is converted, represented either as an actual amount (option B) or a percentage (option A). Strike price of an option, represented either as an actual amount (option B) or a percentage (option A).
INDC	Indicative Price	Estimated price, for example, for valuation purposes.
MRKT	Market Price	Last reported/known price of a financial instrument in a market.

Codes

In option A, Percentage Type Code must contain one of the following codes (Error code(s): K90):

DISC	Discount	Price expressed as the number of percentage points below par, for example, a discount price of 2.0% equals a price of 98 when par is 100.
PRCT	Percentage	Price expressed as a percentage of par.
PREM	Premium	Price expressed as the number of percentage points above par, for example, a premium price of 2.0% equals a price of 102 when par is 100.
YIEL	Yield	Price expressed as a yield.

Codes

In option B, Amount Type Code must contain one of the following codes (Error code(s): K90):

ACTU	Actual Amount	Price expressed as an amount of currency per unit or per share.
DISC	Discount	Price expressed as a discount amount.

PREM Premium Price expressed as a premium.

Network Validated Rules

The integer part of Price must contain at least one digit. The decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).

Currency Code must be a valid ISO 4217 currency code (Error code(s): T52).

Sign may only be present if Percentage Type Code is YIEL (Error code(s): T69).

If Price is zero, Sign must not be present (Error code(s): T14).

Usage Rules

The number of decimal digits in Price is not validated against the currency specified.

Sign must be present when Price is negative.

MT 501 Network Validated Rules

C1 If the message is a cancellation, that is, Function of the Message (field 23G) is CANC, then field :20C::PREV must be present in one and only one occurrence of A1; consequently, in all other occurrences of A1, field :20C::PREV is not allowed (Error code(s): E08).

Sequence A if field :23G: is ...	Then field :20C::PREV is ...
CANC	Mandatory in one occurrence of subsequence A1, and not allowed in all other occurrences of subsequence A1
NEWM	Not applicable

MT 501 Usage Rules

- When the message is used as a cancellation, the linkage sequence must contain the reference of the original confirmation.
- The Identification of Financial Instrument in sequence B Registration Instruction Details identifies the financial instrument to be registered. The Identification of Financial Instrument in sequence D Corporate Action Details identifies subscription rights or exercise warrants from a corporate action.

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	M	EREG	N		A or C	Effective Registration Date/Time
	or	EMOD	N		A or C	Effective Modification Date/Time

Definition

This qualified generic field specifies:

EMOD	Effective Modification Date/ Time	Date/time at which the registration details have been modified.
EREG	Effective Registration Date/ Time	Date/time at which the financial instruments have been registered.

Network Validated Rules

Date must be a valid date expressed as YYYYMMDD (Error code(s): T50).

Time must be a valid time expressed as HHMMSS (Error code(s): T38).

MT 501 - 16. Field 35B: Identification of the Financial Instrument

Format

Option B	[ISIN!e12!c] [4*35x]	(Identification of Security) (Description of Security)
----------	-------------------------	---

Presence

Mandatory in mandatory sequence B

Definition

This field identifies the financial instrument.

Network Validated Rules

At least Identification of a Security (Subfield 1) or Description of Security (Subfield 2) must be present; both may be present (Error code(s): T17).

ISIN is used at the beginning of Identification of Security (Subfield 1) and must be composed of uppercase letters only (Error code(s): T12).

Usage Rules

When used in Description of Security (Subfield 2), codes must start and end with a slash '/'.

When an ISIN identifier is not used it is strongly recommended that one of the following codes be used as the first characters of the Description of Security (Subfield 2):

[/2!a/]	The ISO two-digit country code, followed by the national scheme number.
[/TS/]	Followed by the ticker symbol.
[/XX/]	Bilaterally agreed or proprietary scheme which may be further identified by a code or short description identifying the scheme used.
[/4!c/]	Code identifying the type of security identifier used. This code must be one published by ISO 20022 (ExternalFinancialInstrumentIdentificationTypeCode).

It is strongly recommended that the ISIN be used.

MT 501 - 17. Field 16R: Start of Block

Format

Option R 16c

Presence

Mandatory in optional subsequence B1

Definition

This field specifies the start of a block and the name of that block.

1	O	PLIS	N		B	Place of Listing

Definition

This qualified generic field specifies:

PLIS Place of Listing Place where the referenced financial instrument is listed.

Codes

If Data Source Scheme is not present, Place Code must contain one of the following codes (Error code(s): K94):

EXCH Stock Exchange Place of listing is a stock exchange.

OTCO Over The Counter Place of listing is over the counter.

Network Validated Rules

Narrative must not start or end with a slash '/' and must not contain two consecutive slashes '/' (Error code(s): T26).

Usage Rules

Place of Listing is to be identified by its Market Identifier Code (MIC).

Example

:94B::PLIS//EXCH/XNYS

MT 501 - 19. Field 22F: Indicator

Format

Option F :4!c/[8c]/4!c (Qualifier) (Data Source Scheme) (Indicator)

Presence

Optional in optional subsequence B1

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	MICO	N		F	Method of Interest Computation Indicator
2	O	FORM	N		F	Form of Securities Indicator
3	O	PFRE	N		F	Payment Frequency Indicator
4	O	PAYS	N		F	Payment Status Indicator
5	O	REST	N		F	Restrictions Indicator

Definition

This qualified generic field specifies:

FORM	Form of Securities Indicator	Specifies the form of the financial instrument.
MICO	Method of Interest Computation Indicator	Specifies the computation method of (accrued) interest of the financial instrument.
PAYS	Payment Status Indicator	Specifies the status of the payment of a financial instrument at a particular time, as agreed with the issuer.
PFRE	Payment Frequency Indicator	Specifies the frequency of a payment.

REST	Restrictions Indicator	Specifies the regulatory restrictions applicable to a financial instrument.
------	------------------------	---

Codes

If Qualifier is MICO and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

A001	30/360 (ISDA) or 30/360 (American Basic Rule)	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February, and provided that the interest period started on a 30th or a 31st. This means that a 31st is assumed to be a 30th if the period started on a 30th or a 31st and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). It is the most commonly used 30/360 method for US straight and convertible bonds.
A002	30/365	Method whereby interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and a 365-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th).
A003	30/Actual	Method whereby interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and the assumed number of days in a year in a way similar to the Actual/Actual (ICMA). Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). The assumed number of days in a year is computed as the actual number of days in the coupon period multiplied by the number of interest payments in the year.
A004	Actual/360	Method whereby interest is calculated based on the actual number of accrued days in the interest period and a 360-day year.
A005	Actual/365 (Fixed)	Method whereby interest is calculated based on the actual number of accrued days in the interest period and a 365-day year.
A006	Actual/Actual (ICMA)	Method whereby interest is calculated based on the actual number of accrued days and the assumed number of days in a year, that is, the actual number of days in the coupon period multiplied by the number of interest payments in the year. If the coupon period is irregular (first or last coupon), it is extended or split into quasi interest periods that have the length of a regular coupon period and the computation is operated separately on each quasi interest period and the intermediate results are summed up.

A007	30E/360 or Eurobond basis	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be equivalent to a 30 Feb. However, if the last day of the maturity coupon period is the last day of February, it will not be assumed to be a 30th. It is a variation of the 30/360 (ICMA) method commonly used for eurobonds. The usage of this variation is only relevant when the coupon periods are scheduled to end on the last day of the month.
A008	Actual/Actual (ISDA)	Method whereby interest is calculated based on the actual number of accrued days of the interest period that fall on a normal year, divided by 365, added to the actual number of days of the interest period that fall on a leap year, divided by 366.
A009	Actual/365L or Actual/Actual (basic rule)	Method whereby interest is calculated based on the actual number of accrued days and a 365-day year (if the coupon payment date is NOT in a leap year) or a 366-day year (if the coupon payment date is in a leap year).
A010	Actual/Actual (AFB)	Method whereby interest is calculated based on the actual number of accrued days and a 366-day year (if 29 Feb falls in the coupon period) or a 365-day year (if 29 Feb does not fall in the coupon period). If a coupon period is longer than one year, it is split by repetitively separating full year sub-periods counting backwards from the end of the coupon period (a year backwards from a 28 Feb being 29 Feb, if it exists). The first of the sub-periods starts on the start date of the accrued interest period and thus is possibly shorter than a year. Then the interest computation is operated separately on each sub-period and the intermediate results are summed up.
A011	30/360 (ICMA) or 30/360 (basic rule)	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). It is the most commonly used 30/360 method for non-US straight and convertible bonds issued before 01/01/1999.
A012	30E2/360 or Eurobond basis model 2	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for the last day of February whose day of the month value shall be adapted to the value of the first day of the interest period if the latter is higher and if the period is one of a regular schedule. This means that a 31st is assumed to be a 30th and the 28th Feb of a non-leap year is assumed to be equivalent to a 29th Feb when the first day of the interest period is a 29th, or to a 30th Feb when the first day of the interest period is a 30th or a 31st. The 29th Feb of a leap year is assumed to be equivalent to a 30th Feb when the first day of the interest period is a 30th or a 31st. Similarly, if the coupon period starts on the last day of February, it is assumed to produce only one day of interest in February as if it was starting on a 30th Feb when the end of the period is a 30th or a 31st, or two days of interest in February when the end of the period is a 29th, or 3 days of interest in February when it is the 28th Feb of a non-leap year and the end of the period is before the 29th.

A013	30E3/360 or Eurobond basis model 3	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be equivalent to a 30 Feb. It is a variation of the 30E/360 (or Eurobond basis) method where the last day of February is always assumed to be a 30th, even if it is the last day of the maturity coupon period.
A014	Actual/365NL or Actual/365 No Leap	Method whereby interest is calculated based on the actual number of accrued days in the interest period, excluding any leap day from the count, and a 365-day year.
OTHR	Other	Other method than A001-A014. See Narrative.

Codes

If Qualifier is FORM and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

BEAR	Bearer Security	Financial instruments are in bearer form.
REGD	Registered Security	Financial instruments are in registered form.

Codes

If Qualifier is PFRE and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

ANNU	Annual	Payment frequency is annual.
MNTH	Monthly	Payment frequency is monthly.
QUTR	Quarterly	Payment frequency is quarterly.
SEMI	Semi-Annual	Payment frequency is semi-annual.
WEEK	Weekly	Payment frequency is weekly.

Codes

If Qualifier is PAYS and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

FULL	Fully Paid	Financial instrument is fully paid.
NILL	Nil Paid	Financial instrument is nil paid.
PART	Partially Paid	Financial instrument is partially paid.

Codes

If Qualifier is REST and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

144A	Pursuant to 144A	Ownership or transfer of an unregistered security issued, pursuant to US legal restrictions 144A.
NRST	Not Subject to Restrictions	Ownership or transfer of a security that is not subject to restrictions.
RSTR	Subject to Restrictions (not pursuant to 144A)	Ownership or transfer of a security that is subject to restrictions, and not pursuant to 144A.

MT 501 - 20. Field 12a: Type of Financial Instrument

Format

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	CLAS	N		A or C	Classification Type
2	O	OPST	N		B	Option Style
3	O	OPTI	N		B	Option Type

Definition

This qualified generic field specifies:

CLAS	Classification Type	Classification type of the financial instrument, for example, ISO Classification of Financial instrument (CFI).
OPST	Option Style	Specifies how an option can be exercised.
OPTI	Option Type	Specifies whether it is a call option or a put option.

Codes

In option B, if Qualifier is OPST and Data Source Scheme is not present, Instrument Type Code must contain one of the following codes (Error code(s): K12):

AMER	American Style	Option can be exercised before or on expiry date.
EURO	European Style	Option can be exercised on expiry date only.

Codes

In option B, if Qualifier is OPTI and Data Source Scheme is not present, Instrument Type Code must contain one of the following codes (Error code(s): K12):

CALL	Call Option	A right to buy a defined quantity of an asset by a certain date at an agreed price.
PUTO	Put Option	A right to sell a defined quantity of an asset by a certain date at an agreed price.

Usage Rules

CFI code must contain a valid ISO CFI code.

To use the codes associated with the ISITC code for security type, /ASCT/, Data Source Scheme must be ISIT and Instrument Code or Description must contain a valid ISITC security type code.

Example

:12C::CLAS//ESVUFR (CFI code for equity, common share, voting rights, unrestricted, fully paid and registered).

9	O	FCOU	N		A	First Coupon Date

Definition

This qualified generic field specifies:

CALD	Call Date	Date on which a financial instrument is called away/redeemed before its scheduled maturity date.
COUP	Coupon Date	Next payment date of an interest bearing financial instrument.
DDTE	Dated Date	Date on which an interest bearing financial instrument begins to accrue interest.
EXPI	Expiry Date	Date on which an order expires or on which a privilege or offer terminates.
FCOU	First Coupon Date	First payment date of an interest bearing financial instrument.
FRNR	Floating Rate Note Reset Date	Date on which the interest rate of an interest bearing financial instrument will be or was calculated and reset, according to the terms of the issue.
ISSU	Issue Date	Date on which the financial instrument is issued.

MATU	Maturity Date	Date on which a financial instrument becomes due and assets are to be repaid.
PUTT	Put Date	Date on which a holder of a financial instrument has the right to request redemption of the principal amount prior to its scheduled maturity date.

Network Validated Rules

Date must be a valid date expressed as YYYYMMDD (Error code(s): T50).

4	O	INTR	N		A	Interest Rate
5	O	NXRT	N		A	Next Interest Rate
6	O	YTMR	N		A	Yield To Maturity Rate

Definition

This qualified generic field specifies:

CUFC	Current Factor	Rate expressed as a decimal between 0 and 1 defining the outstanding principal of the financial instrument (for factored securities).
INTR	Interest Rate	Annualised interest rate of a financial instrument used to calculate the actual interest rate of the coupon or the accrued interest.
NWFC	Next Factor	Rate expressed as a decimal between 0 and 1 that will be applicable as of the next factor date and defines the outstanding principal of the financial instrument (for factored securities).

NXRT	Next Interest Rate	Interest rate applicable to the next interest payment period in relation to variable rate instruments.
PRFC	Previous Factor	Rate expressed as a decimal between 0 and 1 that was applicable before the current factor and defines the outstanding principal of the financial instrument (for factored securities).
YTMR	Yield To Maturity Rate	Rate of return anticipated on a bond when held until maturity date.

Network Validated Rules

The integer part of Rate must contain at least one digit. The decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).

If Rate is zero, Sign must not be present (Error code(s): T14).

Usage Rules

Sign must be present when Rate is negative.

Except if notified differently in the rate definition, when used with format option A (:4!c/[N]15d), the rate must be expressed as a percentage, not as a decimal fraction (12% must be identified by 12, and not 0,12).

This qualified generic field specifies:

EXER	Exercise Price	<ol style="list-style-type: none"> Price at which the security will be purchased/sold if warrant is exercised, represented either as an actual amount (option B) or a percentage (option A). Price at which a bond is converted, represented either as an actual amount (option B) or a percentage (option A). Strike price of an option, represented either as an actual amount (option B) or a percentage (option A).
INDC	Indicative Price	Estimated price, for example, for valuation purposes.
MRKT	Market Price	Last reported/known price of a financial instrument in a market.

Codes

In option A, Percentage Type Code must contain one of the following codes (Error code(s): K90):

DISC	Discount	Price expressed as the number of percentage points below par, for example, a discount price of 2.0% equals a price of 98 when par is 100.
PRCT	Percentage	Price expressed as a percentage of par.
PREM	Premium	Price expressed as the number of percentage points above par, for example, a premium price of 2.0% equals a price of 102 when par is 100.

MINO	Minimum Nominal Quantity	Minimum nominal quantity of financial instrument.
SIZE	Contract Size	Ratio or multiplying factor used to convert one contract into a financial instrument quantity.

Codes

In option B, Quantity Type Code must contain one of the following codes (Error code(s): K36):

AMOR	Amortised Value	Quantity expressed as an amount representing the current amortised face amount of a bond, for example, a periodic reduction/increase of a bond's principal amount.
FAMT	Face Amount	Quantity expressed as an amount representing the face amount, that is, the principal, of a debt instrument.
UNIT	Unit Number	Quantity expressed as a number, for example, a number of shares.

Codes

In option D, Quantity Type Code must contain the following code (Error code(s): K36):

DITU	Digital Token Unit Number	Quantity of digital token expressed as a number, for example, a number of blockchain tokens.
------	---------------------------	--

Network Validated Rules

The integer part of Quantity must contain at least one digit. The decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).

Usage Rules

Format option D may only be used when the related account information in subsequence B2 field : 97D::BCAW is present.

MT 501 - 55. Field 35B: Identification of the Financial Instrument

Format

Option B	[ISIN!e12!c] [4*35x]	(Identification of Security) (Description of Security)
----------	-------------------------	---

Presence

Optional in optional sequence D

Definition

This field identifies the financial instrument.

Network Validated Rules

At least Identification of a Security (Subfield 1) or Description of Security (Subfield 2) must be present; both may be present (Error code(s): T17).

ISIN is used at the beginning of Identification of Security (Subfield 1) and must be composed of uppercase letters only (Error code(s): T12).

Usage Rules

When used in Description of Security (Subfield 2), codes must start and end with a slash '/'.

When an ISIN identifier is not used it is strongly recommended that one of the following codes be used as the first characters of the Description of Security (Subfield 2):

[/2!a/]	The ISO two-digit country code, followed by the national scheme number.
[/TS/]	Followed by the ticker symbol.

[/XX/]	Bilaterally agreed or proprietary scheme which may be further identified by a code or short description identifying the scheme used.
[/4!c/]	Code identifying the type of security identifier used. This code must be one published by ISO 20022 (ExternalFinancialInstrumentIdentificationTypeCode).

It is strongly recommended that the ISIN be used.

C4 If the message is a cancellation or a replacement, that is, Function of the Message (field 23G) is CANC or REPL, then subsequence A1 (Linkages) must be present at least once in the message, and in one and only one occurrence of A1, field :20C::PREV must be present; consequently, in all other occurrences of A1, field :20C::PREV is not allowed (Error code(s): E08).

Sequence A if field :23G: is ...	Then subsequence A1 is ...	And field :20C::PREV is ...
CANC or REPL	Mandatory (minimum one occurrence of A1 must be present)	Mandatory in one occurrence of subsequence A1, and not allowed in all other occurrences of subsequence A1
NEWM	Optional	Not applicable

C5 The following party fields for subsequences C1 and C2 cannot appear more than once in sequence C. The party fields for sequence D cannot appear more than once in a message (Error code(s): E84).

Subsequence C1	Subsequence C2	Sequence D
:95a::BUYR	:95a::ACCW	:95a::EXCH
:95a::DEAG	:95a::BENM	:95a::MEOR
:95a::DECU	:95a::PAYE	:95a::MERE
:95a::DEI1	:95a::DEBT	:95a::TRRE
:95a::DEI2	:95a::INTM	:95a::VEND
:95a::PSET		:95a::TRAG
:95a::REAG		
:95a::RECU		
:95a::REI1		
:95a::REI2		
:95a::SELL		

C6 In sequence B, either an ordered quantity (field :36B::ORDR) or an ordered amount (field :19A::ORDR) must be present, but not both (Error code(s): E58).

Sequence B if field :36B::ORDR is ...	Sequence B then field :19A::ORDR is ...
Present	Not allowed
Not present	Mandatory

C7 If a qualifier from the list Deliverers is present in a subsequence C1 in a field :95a::4!c, then all the remaining qualifiers following this qualifier in the list Deliverers (see below) must be present (Error code(s): E86).

In other words, in sequence C, the following scenarios must be validated:

- If :95a::DEI2 is present in subsequence C1, then :95a::DEI1 must be present in another subsequence C1.
- If :95a::DEI1 is present in subsequence C1, then :95a::DECU must be present in another subsequence C1.
- If :95a::DECU is present in subsequence C1, then :95a::SELL must be present in another subsequence C1.
- If :95a::SELL is present in subsequence C1, then :95a::DEAG must be present in another subsequence C1.

If a qualifier from the list Receivers is present in a subsequence C1 in a field :95a::4!c, then all the remaining qualifiers following this qualifier in the list Receivers (see below) must be present.

In other words, in sequence C, the following scenarios must be validated:

- If :95a::REI2 is present in subsequence C1, then :95a::REI1 must be present in another subsequence C1.
- If :95a::REI1 is present in subsequence C1, then :95a::RECU must be present in another subsequence C1.
- If :95a::RECU is present in subsequence C1, then :95a::BUYR must be present in another subsequence C1.
- If :95a::BUYR is present in subsequence C1, then :95a::REAG must be present in another subsequence C1.

Deliverers		Receivers	
DEI2	Deliverer's Intermediary 2	REI2	Receiver's Intermediary 2
DEI1	Deliverer's Intermediary 1	REI1	Receiver's Intermediary 1
DECU	Deliverer's Custodian	RECU	Receiver's Custodian
SELL	Seller (Deliverer)	BUYR	Buyer (Receiver)
DEAG	Delivering Agent	REAG	Receiving Agent

C8 In subsequence C1, if field :95a::PSET is present, then field :97a:: is not allowed in the same sequence (Error code(s): E52).

Subsequence C1 if field :95a::PSET is ...	Subsequence C1 then field :97a:: is ...
Present	Not allowed within the same occurrence
Not present	Optional

C9 In sequence B, if field :22H::BUSE//SWIT is present, then subsequence A1 Linkages is mandatory, and field :20C::PREV must be present in minimum one occurrence of subsequence A1 Linkages (Error code(s): E53).

Sequence B if field :22H::BUSE//SWIT is ...	Then subsequence A1 is ...	And field :20C::PREV is ...
Present	Mandatory, that is minimum one occurrence of A1	Mandatory, that is must be present in minimum one occurrence of A1
Not present	Optional	Not applicable

C10 If field :22F::DBNM//VEND is present in sequence C, then a vendor must be specified; that is one occurrence of sequence D must contain field :95a::VEND (Error code(s): D71).

If sequence C is ...	And in sequence C if field :22F::DBNM// VEND is ... (1)	Then sequence D is ...	And in one occurrence of sequence D field :95a::VEND is ...
Present	Present	Mandatory, that is sequence D must be present minimum once	Mandatory
	Not present	Optional	Optional
Not present	Not applicable	Optional	Optional

(1) If the Data Source Scheme is present in field :22F::DBNM//VEND then the conditional rule does not apply.

C11 In sequence D, if field :95a::EXCH Stock Exchange or :95a::TRRE Trade Regulator is present, then field :97a:: is not allowed in the same sequence (Error code(s): E63).

Sequence D if field :95a::EXCH or TRRE is ...	Sequence D then field :97a:: is ...
Present	Not allowed within the same occurrence
Not present	Optional

C12 In sequence B, if Original Ordered Quantity (field :36B::ORDR) is present more than once then Buy/Sell Indicator (field :22H::BUSE) must be present with Indicator code FPOO or IPOO or IPPO (Error code(s): E75).

Sequence B if field :36B::ORDR is ...	Sequence B then field :22H::BUSE ...
Not present or present only once	May contain any Indicator code
Present more than once	Indicator code must be FPOO or IPOO or IPPO

C13 In sequence B, field :94a::TRAD must not be present more than twice. When repeated, one and only one occurrence must be with format option L (:94L::TRAD) (Error code(s): E99).

In sequence B, field :94a::SAFE must not be present more than twice. When repeated, one and only one occurrence must be with format option L (:94L::SAFE) (Error code(s): E99).

In each occurrence of subsequence B2, field :95a::ALTE must not be present more than twice. When repeated, one and only one occurrence must be with format option L (:95L::ALTE) (Error code(s): E99).

In each occurrence of subsequence C1, field :95a::ALTE must not be present more than twice. When repeated, one and only one occurrence must be with format option L (:95L::ALTE) (Error code(s): E99).

In each occurrence of subsequence C2, field :95a::ALTE must not be present more than twice. When repeated, one and only one occurrence must be with format option L (:95L::ALTE) (Error code(s): E99).

In each occurrence of sequence D, field :95a::ALTE must not be present more than twice. When repeated, one and only one occurrence must be with format option L (:95L::ALTE) (Error code(s): E99).

- C14** In each occurrence of sequence D, if field :95a::ALTE is present with format option L, then field :95a::MEOR and field :95a::MERE must not be present in the same occurrence of the sequence (Error code(s): E88).

MT 502 Usage Rules

- When an instruction is sent to a party other than the original Receiver, this original Receiver is identified in the other parties sequence as :95a::MERE (Recipient of the Message).
- In cross-border, broker-to-broker trades, the place of settlement (:95a::PSET), must be present.
- When a broker is identified as a confirming party, the party capacity (:22F::TRCA) must be specified.
- When there is a need to pre-allocate, a master reference must be used in the linkage sequence of the MT 502. The MT 514 Trade Allocation Instruction, is used to instruct the pre-allocation. The master reference must be used in the linkage sequence of all the associated MT 514s.
- Field 22F Indicator, with the qualifier PRCO, that is, Pre-Allocation Condition, must be used to indicate how to allocate if the block cannot be fully executed, and to convey rounding instructions in case of fractional shares.
- Optional sequence C Settlement Details may be used to convey early information regarding settlement.
- The Receiver of a request to cancel or replace must advise the requesting party that the request has been accepted or denied in an MT 509 Trade Status Message.

MT 502 Field Specifications

MT 502 - 1. Field 16R: Start of Block

Format

Option R

16c

Presence

Mandatory in mandatory sequence A

Definition

This field specifies the start of a block and the name of that block.

Codes

This field must contain the following code (Error code(s): T92):

GENL General Information

MT 502 - 2. Field 20C: Reference: Sender's Message Reference

Format

Option C :4!c//16x (Qualifier) (Reference)

Presence

Mandatory in mandatory sequence A

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	M	SEME	N		C	Sender's Message Reference

Definition

This qualified generic field specifies:

SEME Sender's Message Reference assigned by the Sender to unambiguously identify the message.

Network Validated Rules

Reference must not start or end with a slash '/' and must not contain two consecutive slashes '/' (Error code(s): T26).

MT 502 - 3. Field 23G: Function of the Message

Format

Option G 4!c[/4!c] (Function) (Subfunction)

Presence

Mandatory (referenced in rules C2 and C4) in mandatory sequence A

Definition

This field identifies the function of the message.

Codes

Function must contain one of the following codes (Error code(s): T86):

CANC	Cancellation Request	Message requesting the cancellation of a previously sent message.
NEWM	New	New message.
REPL	Replacement	Message replacing a previously sent message.

Codes

Subfunction, when present, must contain one of the following codes (Error code(s): T85):

CODU	Copy Duplicate	Message is a copy to a party other than the account owner/account servicer, for information purposes and the message is a duplicate of a message previously sent.
COPY	Copy	Message is a copy to a party other than the account owner/account servicer, for information purposes.
DUPL	Duplicate	Message is for information/confirmation purposes. It is a duplicate of a message previously sent.

Usage Rules

To cancel a previously sent order to buy or sell, Function is CANC. The reference in the linkage sequence must contain the Sender's reference of the message to be cancelled. A copy of at least the mandatory fields of the message to be cancelled must be present; optional fields need not be present for SWIFT validation.

To replace a previously sent order to buy or sell, Function is REPL. The reference in the linkage sequence must contain the Sender's reference of the message to be replaced.

MT 502 - 4. Field 98a: Date/Time: Preparation Date/Time

Format

Option A	:4!c//8!n	(Qualifier) (Date)
Option C	:4!c//8!n6!n	(Qualifier) (Date) (Time)
Option E	:4!c//8!n6!n[,3n] [/N]2!n[2!n]	(Qualifier) (Date) (Time) (Decimals) (UTC Indicator)

Presence

Optional in mandatory sequence A

Qualifier

(Error code(s): T89)

TRTR	Trade Transaction Type Indicator	Specifies the type of transaction of which the order is a component.
------	----------------------------------	--

Codes

If Qualifier is TRTR and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

BASK	Basket Trade	Transaction is a single order to buy and sell several financial instruments for the purpose of simultaneous buying and selling. Baskets are often used for a set of 15 or more financial instruments and play a role in arbitrage activity.
INDX	Index Trade	Transaction is a single order to buy or sell all underlying financial instruments of an index, for example, S&P500.
LIST	List Trade	Transaction is a trade of a predetermined set of financial instruments.
PROG	Program Trade	Transaction relates to computer-driven automatically executed trades in large volumes of a set of several financial instruments.
TRAD	Trade	Transaction is a regular trade.

Codes

If Qualifier is PRCO and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

FULL	Full	Pre-allocate shares only if fully dealt.
NOFR	No Fraction	No fractional shares are allowed.
PROR	Pro-Rate	In the case of a partial fill, pro-rate the allocations.
RDUP	Round Up	In the case of fractional shares, round up to the nearest whole number.
RDWN	Round Down	In the case of fractional shares, round down to the nearest whole number.
SPEC	Specific	In the case of a partial fill, pre-allocate according to the amounts shown in a linked allocation instruction.

MT 502 - 6. Field 16R: Start of Block

Format

Option R 16c

Presence

Mandatory in optional subsequence A1

Usage Rules

If code WITH is used, it links together one or more instructions which become bound and which must be executed together. Even if one single instruction can not be executed, then all the other instructions must also be kept pending. Therefore the use of code WITH must be limited to combine up to 2 or 3 instructions.

MT 502 - 8. Field 13a: Number Identification: Linked Message

Format

Option A :4!c//3!c (Qualifier) (Number Id)
 Option B :4!c/[8c]/30x (Qualifier) (Data Source Scheme) (Number)

Presence

Optional in optional subsequence A1

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	LINK	N		A or B	Linked Message

Definition

This qualified generic field specifies:

LINK Linked Message Message type number/message identifier of the message referenced in the linkage sequence.

Network Validated Rules

Number (Format Option B) must not start or end with a slash '/' and must not contain two consecutive slashes '/' (Error code(s): T26).

Usage Rules

Format A Number Id must contain the FIN message type number of the linked message.
 Format B Number must contain the XML message identifier of the linked message.

MT 502 - 9. Field 20C: Reference

Format

Option C :4!c//16x (Qualifier) (Reference)

Presence

Mandatory in optional subsequence A1

Qualifier

DNIN	Do Not Increase	Limit order to buy or stop order to sell or stop limit order that is not to be increased in shares on the ex-dividend date as a result of a stock dividend or distribution.
DNRE	Do Not Reduce	Limit order to buy or stop order to sell, or stop-limit order to sell that is not to be reduced in price by the amount of an ordinary cash dividend. Applies only to ordinary stock dividends; should be reduced for other distributions.
ICEB	Iceberg Order	Type of limit order whose overall quantity is not transparent to the market. Rather, only a client-defined part of the order is shown to the market (the 'tip of the iceberg'). Upon execution of the first 'tip' (that is partial execution to the client while for the market it does not appear to be a 'partial') the system releases the next 'tip' of the same size to the market until the 'iceberg' has been melted down successfully. Different from a usual care order.
LIWI	Limit With	Order to be executed at a limit price, with a round-lot (or board-lot) sales; valid only for odd lot orders.
LIWO	Limit Without	Order to be executed at a limit price, without a round-lot (or board-lot) sales; valid only for odd lot orders.
LMTO	Limit Order	Order to buy at the indicated price limit or lower or an order to sell at the indicated limit price or higher.
MAKT	At Market	Order to buy or sell a specified amount of a financial instrument at the quoted market price or better.
MANH	Market Not Held	Order to buy or sell a specified amount of a financial instrument at the quoted market price or better with some discretion on the price limit.
MTLO	Market to Limit Order	Type of order that couples the high possibility of execution (Market Order) with a protection against unwanted price fluctuations (Limit Order).

MUTO	Market Until Touched	Order to buy or sell a specified amount of a financial instrument at the quoted market price or better with some discretion on the price limit.
NOHE	Not Held	Order that may be executed in partials or outside the hours of the exchange or other exchange rules.
ORLI	Order Lie	Order that is related to another order where the second order may be cancelled without cancelling the first. Normally, the sell order must be executed before the buy order.
SLOS	Stop Loss	Order to sell that sets the sell price below the market price.
SPLU	Sell Plus	Order to sell a stated amount provided that the price is not lower than the last sale price if the last sale was a plus or zero plus tick and not lower than the last sale minus the minimum fractional change in the financial instrument if the last sale was a minus or zero minus tick.
STLI	Stop Limit	Stop order to buy (sell) that becomes a limit order at the limit price when the financial instrument trades at or above (below) the stop price after the order is submitted.
STOP	Stop Order	Order to buy that becomes a market order when the financial instrument trades at or above the stop price after the order is submitted or an order to sell which becomes a market order when the financial instrument trades at or below the stop price.
SSEX	Sell Short Exempt	Order to sell short which is exempt from short-sale rules.
SSHO	Sell Short	Order to sell a financial instrument that the seller does not own; a sale effected by delivering a financial instrument borrowed by or for the account of the seller.

Codes

In option F, if Qualifier is TILI and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

CLOS	At the Closing	Order to be executed at or around the closing price.
FAKI	Fill and Kill	Order to be executed as much as possible. Non-executed parts of a FAK are deleted.
FIKI	Fill or Kill	Market or limit order that is to be executed in its entirety as soon as it is submitted; if not so executed, the order is to be cancelled.
GDAY	Good for the Day	Order that, if not executed, expires at the end of the trading day on which the order is entered.
GTCA	Good until Cancelled	Order that remains in effect until it is either executed or cancelled.
GTHD	Good through Date	Order that, if not executed, expires at the end of the specified expiry date.
GTMO	Good for the Month	Order that, if not executed, expires at the end of the month on which the order is entered.

GTNM	Good until the End of Next Month	Order that, if not executed, expires at the end of next month.
GTXO	Good till Crossed	Order that remains in effect until crossed.
IOCA	Immediate or Cancel	Market or limit order to be executed in whole or in part as soon as it is submitted; any portion not so executed is to be cancelled.
OPEN	At the Opening	Market or limit order to be executed at the opening of the stock exchange or not at all; all or part of any order not executed at the opening is treated as cancelled.

Codes

In option H, if Qualifier is PAYM, Indicator must contain one of the following codes (Error code(s): K22):

APMT	Against Payment	Against payment.
FREE	Free	Free.

Codes

In option F, if Qualifier is AUTO and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

DDOT	Designated Order Turnaround System	Indicates the Designated Order Turnaround system: a computerised order routing system used at the New York Stock Exchange.
SDOT	Evolution of the DOT System	Indicates the evolution of the DOT system, (Designated Order Turnaround system): a computerized order routing system used at the New York Stock Exchange.

Codes

In option F, if Qualifier is CATB and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

FLAT	Charges/Tax Basis Flat or Absolute	Charges/tax basis is flat or absolute for the trade being allocated.
PERU	Charges/Tax Basis per Unit	Charge/tax basis is per unit of financial instrument.

Codes

In option F, if Qualifier is TRCN and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

SOLI	Solicited	Trade was solicited by the executing broker. The broker has suggested to his client to buy/sell financial instruments.
USOL	Unsolicited	Trade was unsolicited. The client acts on its own without advice from the executing broker.

Codes

In option F, if Qualifier is TRSE and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

AUCT	Auctions	Orders that are traded in regularly occurring auctions: orders are accumulated and executed on the basis of defined algorithms.
CONT	Continuous	Orders that are executed directly against each other as they hit the marketplace.

Codes

In option H, if Qualifier is CAOP, Indicator must contain one of the following codes (Error code(s): K22):

CASH	Cash	Distribution of cash to holders.
DRIP	Reinvestment of Proceeds	Reinvestment proceeds into securities.

Codes

In option F, if Qualifier is RMTH and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

EXAC	Exact	Exact number.
RDUP	Round Up	Round up to the nearest whole number.
RDDN	Round Down	Round down to the nearest whole number.

Codes

If Qualifier is PRIR and Data Source Scheme is not present, Indicator must contain a numerical value in the range 0001 - 9999 where 0001 refers to the highest priority (Error code(s): K22).

Usage Rules

The qualifier CAOP is to be used for investment funds only, whereby the holder has the option to receive the distribution in cash or reinvest in securities.

If field :22H::BUSE//SWIT is used, then in the linkage sequence reference must be made to the previous message sent and containing field :22H::BUSE//SWIF.

Qualifier TOOR codes BCSE, BCSH and BMIN are only to be used for orders to buy.

Qualifier TOOR codes SLOS, SPLU, SSEX and SSHO are only to be used for orders to sell.

The qualifier BUSE, with codes SUBS, DIVR, REDM, CROF, CROT, SWIF and SWIT must only be used by institutions that are members of the Funds Closed User Group (CUG). Institutions that are not members of the Funds CUG and that send the MT 502 with any of the above codes will receive a NAK with error code G26.

MT 502 - 19. Field 98a: Date/Time

Format

Option A	:4!c//8!n	(Qualifier) (Date)
Option B	:4!c/[8c]/4!c	(Qualifier) (Data Source Scheme) (Date Code)
Option C	:4!c//8!n6!n	(Qualifier) (Date) (Time)

Presence

Mandatory in mandatory sequence B

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	M	EXPI	N		A or C	Expiry Date/Time
2	O	RSET	N		A, B, or C	Requested Settlement Date/Time
3	O	NAVD	N		A or C	Net Asset Value Calculation Date/Time

Definition

This qualified generic field specifies:

EXPI	Expiry Date/Time	Date/time at which an order expires or at which a privilege or offer terminates.
NAVD	Net Asset Value Calculation Date/Time	Date/time at which the net asset value is calculated (funds industry).
RSET	Requested Settlement Date/Time	Date/time at which the instructing party requests settlement to take place.

Codes

In option B, if Qualifier is RSET and Data Source Scheme is not present, Date Code must contain one of the following codes (Error code(s): K98):

CASH	Cash	Settlement is to be completed Cash (TOD/T+0).
NEDA	Next Day	Settlement is to be completed on the next Day (TOM/T+1).
OTHR	Other	Other settlement date.

REGU	Regular	Regular is defined as the default settlement period for the particular security on the exchange of execution (for example, T+1 or T+2 depending on currency).
SEOP	Seller's Option	Settlement is to be completed at the seller's option.

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	CORA	N		A	Commission Rate Applied
2	O	COWA	N		A	Percentage Commission Waived
3	O	SWRT	N		A	Switch Rate

Definition

This qualified generic field specifies:

CORA	Commission Rate Applied	Commission rate applied after waiving.
COWA	Percentage Commission Waived	Percentage of the commission that is waived.
SWRT	Switch Rate	To be used for 'switch to' instructions (22F::BUSE//SWIT) and for 1 to n "switch to" scenarios (Funds Industry).

Network Validated Rules

The integer part of Rate must contain at least one digit. A decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).

If Rate is zero, Sign must not be present (Error code(s): T14).

Usage Rules

Sign must be present when Rate is negative.

SWRT (Switch Rate) is only to be used for "switch to" instructions (22F::BUSE//SWIT) and for 1 to n "switch to" scenarios (Funds Industry).

Except if notified differently in the rate definition, when used with format option A (:4!c//[N]15d), the rate must be expressed as a percentage, not as a decimal fraction (12% must be identified by 12, and not 0,12).

MT 502 - 21. Field 11A: Currency

Format

Option A :4!c//3!a (Qualifier) (Currency Code)

Presence

Optional in mandatory sequence B

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	PACO	N		C	Party Narrative
2	O	DECL	N		E	Declaration Details Narrative

Definition

This qualified generic field specifies:

DECL Declaration Details Narrative Provides declaration details narrative relative to the party.
 PACO Party Narrative Provides additional information regarding the party, for example, the contact unit or person responsible for the transaction identified in the message.

Usage Rules

Unless bilaterally agreed between the Sender and the Receiver, narrative field 70a must not contain information that can be provided in a structured field.

MT 502 - 28. Field 22F: Indicator

Format

Option F :4!c/[8c]/4!c (Qualifier) (Data Source Scheme) (Indicator)

Presence

Optional in mandatory subsequence B2

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	TRCA	N		F	Party Capacity Indicator
2	O	INCA	N		F	Investor Capacity Indicator

Definition

This qualified generic field specifies:

INCA	Investor Capacity Indicator	Role of the investor in the transaction.
TRCA	Party Capacity Indicator	Specifies the role of the party in the transaction.

Codes

If Qualifier is TRCA and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

AGEN	Trading as Agent	Party is trading on behalf of his client.
BAGN	Acting as Agent for Customer and Other Person	Party is acting as an agent for both customer and another person.
CAGN	Crossing as Agent	Party is crossing on behalf of his client.
CPRN	Crossing as Principal	Party is crossing for his own account.
OAGN	Acting as Agent for Person Other than Customer	Party is acting as an agent for a person other than a customer.
PRAG	Acting as Agent for Some Executions and Principal	Party is acting as an agent for some executions and principal for others.
PRIN	Trading as Principal	Party is trading for his own account.
RISP	Acting as Riskless Principal	Party is trading as a riskless principal, that is, the order to buy (sell) has been simultaneously offset by an order to sell (buy) with another party.

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	ORDR	R	C2, C6, C12	B or D	Original Ordered Quantity
2	O	CANC	N	C2	B or D	Quantity to Cancel
	or	MINI	N		B or D	Minimum to be Bought or Sold
3	O	MAIN	N		B or D	Match Increment
4	O	MAXF	N		B or D	Maximum to be Shown on the Floor at a Time

Definition

This qualified generic field specifies:

CANC	Quantity to Cancel	Quantity of financial instruments to cancel in a request to cancel or partially cancel.
MAIN	Match Increment	Minimum quantity that applies to every execution. The order may still fill against smaller orders, but the cumulative quantity of the execution must be in multiples of the Match Increment.
MAXF	Maximum to be Shown on the Floor at a Time	Maximum quantity of an order to be revealed on the stock exchange at a time.
MINI	Minimum to be Bought or Sold	Minimum quantity of financial instruments to be bought or sold if the entire order cannot be executed.
ORDR	Original Ordered Quantity	Quantity of financial instrument ordered.

Codes

In option B, Quantity Type Code must contain one of the following codes (Error code(s): K36):

AMOR	Amortised Value	Quantity expressed as an amount representing the current amortised face amount of a bond, for example, a periodic reduction/increase of a bond's principal amount.
FAMT	Face Amount	Quantity expressed as an amount representing the face amount, that is, the principal, of a debt instrument.
UNIT	Unit Number	Quantity expressed as a number, for example, a number of shares.

Codes

In option D, Quantity Type Code must contain the following code (Error code(s): K36):

Usage Rules

Sign is used when the Amount is credited while the practice or the transaction type would normally imply that the Amount should be debited (or vice versa).

In case a market order is identified as an amount (that is, an amount of money to be invested), then this field and its qualifier must be used. Consequently, the quantity cannot be specified.

The Executing Party needs to place an order which meets as close as possible the amount specified in this field 19A.

In the confirmation message sent by the Executing Party when the order has been filled, the actual quantity and price must be specified.

MT 502 - 32. Field 35B: Identification of the Financial Instrument

Format

Option B	[ISIN!e12!c] [4*35x]	(Identification of Security) (Description of Security)
----------	-------------------------	---

Presence

Mandatory in mandatory sequence B

Definition

This field identifies the financial instrument.

Network Validated Rules

At least Identification of a Security (Subfield 1) or Description of Security (Subfield 2) must be present; both may be present (Error code(s): T17).

ISIN is used at the beginning of Identification of Security (Subfield 1) and must be composed of uppercase letters only (Error code(s): T12).

Usage Rules

When used in Description of Security (Subfield 2), codes must start and end with a slash '/'.

When an ISIN identifier is not used it is strongly recommended that one of the following codes be used as the first characters of the Description of Security (Subfield 2):

- [/2!a/] The ISO two-digit country code, followed by the national scheme number.
- [/TS/] Followed by the ticker symbol.
- [/XX/] Bilaterally agreed or proprietary scheme which may be further identified by a code or short description identifying the scheme used.
- [/4!c/] Code identifying the type of security identifier used. This code must be one published by ISO 20022 (ExternalFinancialInstrumentIdentificationTypeCode).

It is strongly recommended that the ISIN be used.

Network Validated Rules

Narrative must not start or end with a slash '/' and must not contain two consecutive slashes '//' (Error code(s): T26).

Usage Rules

Place of Listing is to be identified by its Market Identifier Code (MIC).

Example

:94B::PLIS//EXCH/XNYS

MT 502 - 35. Field 22F: Indicator

Format

Option F :4!c/[8c]/4!c (Qualifier) (Data Source Scheme)
 (Indicator)

Presence

Optional in optional subsequence B3

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	MICO	N		F	Method of Interest Computation Indicator
2	O	FORM	N		F	Form of Securities Indicator
3	O	PFRE	N		F	Payment Frequency Indicator
4	O	PAYS	N		F	Payment Status Indicator
5	O	CFRE	N		F	Variable Rate Change Frequency Indicator
6	O	CANR	N		F	Cancellation Right Indicator

Definition

This qualified generic field specifies:

- CANR Cancellation Right Indicator Specifies the cancellation right of an investor with respect to an investment fund order.
- CFRE Variable Rate Change Frequency Indicator Specifies the frequency of change to the variable rate of an interest bearing instrument.
- FORM Form of Securities Indicator Specifies the form of the financial instrument.

MICO	Method of Interest Computation Indicator	Specifies the computation method of (accrued) interest of the financial instrument.
PAYS	Payment Status Indicator	Specifies the status of the payment of a financial instrument at a particular time, as agreed with the issuer.
PFRE	Payment Frequency Indicator	Specifies the frequency of a payment.

Codes

If Qualifier is MICO and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

A001	30/360 (ISDA) or 30/360 (American Basic Rule)	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February, and provided that the interest period started on a 30th or a 31st. This means that a 31st is assumed to be a 30th if the period started on a 30th or a 31st and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). It is the most commonly used 30/360 method for US straight and convertible bonds.
A002	30/365	Method whereby interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and a 365-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th).
A003	30/Actual	Method whereby interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and the assumed number of days in a year in a way similar to the Actual/Actual (ICMA). Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). The assumed number of days in a year is computed as the actual number of days in the coupon period multiplied by the number of interest payments in the year.
A004	Actual/360	Method whereby interest is calculated based on the actual number of accrued days in the interest period and a 360-day year.
A005	Actual/365 (Fixed)	Method whereby interest is calculated based on the actual number of accrued days in the interest period and a 365-day year.

A006	Actual/Actual (ICMA)	Method whereby interest is calculated based on the actual number of accrued days and the assumed number of days in a year, that is, the actual number of days in the coupon period multiplied by the number of interest payments in the year. If the coupon period is irregular (first or last coupon), it is extended or split into quasi interest periods that have the length of a regular coupon period and the computation is operated separately on each quasi interest period and the intermediate results are summed up.
A007	30E/360 or Eurobond basis	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be equivalent to a 30 Feb. However, if the last day of the maturity coupon period is the last day of February, it will not be assumed to be a 30th. It is a variation of the 30/360 (ICMA) method commonly used for eurobonds. The usage of this variation is only relevant when the coupon periods are scheduled to end on the last day of the month.
A008	Actual/Actual (ISDA)	Method whereby interest is calculated based on the actual number of accrued days of the interest period that fall on a normal year, divided by 365, added to the actual number of days of the interest period that fall on a leap year, divided by 366.
A009	Actual/365L or Actual/Actual (basic rule)	Method whereby interest is calculated based on the actual number of accrued days and a 365-day year (if the coupon payment date is NOT in a leap year) or a 366-day year (if the coupon payment date is in a leap year).
A010	Actual/Actual (AFB)	Method whereby interest is calculated based on the actual number of accrued days and a 366-day year (if 29 Feb falls in the coupon period) or a 365-day year (if 29 Feb does not fall in the coupon period). If a coupon period is longer than one year, it is split by repetitively separating full year sub-periods counting backwards from the end of the coupon period (a year backwards from a 28 Feb being 29 Feb, if it exists). The first of the sub-periods starts on the start date of the accrued interest period and thus is possibly shorter than a year. Then the interest computation is operated separately on each sub-period and the intermediate results are summed up.
A011	30/360 (ICMA) or 30/360 (basic rule)	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). It is the most commonly used 30/360 method for non-US straight and convertible bonds issued before 01/01/1999.

A012	30E2/360 or Eurobond basis model 2	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for the last day of February whose day of the month value shall be adapted to the value of the first day of the interest period if the latter is higher and if the period is one of a regular schedule. This means that a 31st is assumed to be a 30th and the 28th Feb of a non-leap year is assumed to be equivalent to a 29th Feb when the first day of the interest period is a 29th, or to a 30th Feb when the first day of the interest period is a 30th or a 31st. The 29th Feb of a leap year is assumed to be equivalent to a 30th Feb when the first day of the interest period is a 30th or a 31st. Similarly, if the coupon period starts on the last day of February, it is assumed to produce only one day of interest in February as if it was starting on a 30th Feb when the end of the period is a 30th or a 31st, or two days of interest in February when the end of the period is a 29th, or 3 days of interest in February when it is the 28th Feb of a non-leap year and the end of the period is before the 29th.
A013	30E3/360 or Eurobond basis model 3	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be equivalent to a 30 Feb. It is a variation of the 30E/360 (or Eurobond basis) method where the last day of February is always assumed to be a 30th, even if it is the last day of the maturity coupon period.
A014	Actual/365NL or Actual/365 No Leap	Method whereby interest is calculated based on the actual number of accrued days in the interest period, excluding any leap day from the count, and a 365-day year.
OTHR	Other	Other method than A001-A014. See Narrative.

Codes

If Qualifier is FORM and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

BEAR	Bearer Security	Financial instruments are in bearer form.
REGD	Registered Security	Financial instruments are in registered form.

Codes

If Qualifier is PFRE and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

ANNU	Annual	Payment frequency is annual.
MNTH	Monthly	Payment frequency is monthly.
QUTR	Quarterly	Payment frequency is quarterly.
SEMI	Semi-Annual	Payment frequency is semi-annual.

WEEK	Weekly	Payment frequency is weekly.
------	--------	------------------------------

Codes

If Qualifier is PAYS and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

FULL	Fully Paid	Financial instrument is fully paid.
NILL	Nil Paid	Financial instrument is nil paid.
PART	Partially Paid	Financial instrument is partially paid.

Codes

If Qualifier is CFRE and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

ANNU	Annual	Frequency is annual.
MNTH	Monthly	Frequency is monthly.
QUTR	Quarterly	Frequency is quarterly.
SEMI	Semi-Annual	Frequency is semi-annual.
WEEK	Weekly	Frequency is weekly.

Codes

If Qualifier is CANR and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

NOIN	Not Entitled-Institutional	Investor is not entitled to cancellation rights under compliance rules as the investor is an institutional investor.
NOWA	Not Entitled-Waiver	Investor is not entitled to cancellation rights under compliance rules as the investor has agreed to waive those rights.
NOXO	Not Entitled-Execution Only	Investor is not entitled to cancellation rights under compliance rules, as the investor is an execution's only client.
VALI	Cooling-Off	Investor is entitled to a "cooling off" period with cancellation rights under compliance rules.

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	CLAS	N		A or C	Classification Type
2	O	OPST	N		B	Option Style
3	O	OPTI	N		B	Option Type

Definition

This qualified generic field specifies:

CLAS	Classification Type	Classification type of the financial instrument, for example, ISO Classification of Financial instrument (CFI).
OPST	Option Style	Specifies how an option can be exercised.
OPTI	Option Type	Specifies whether it is a call option or a put option.

Codes

In option B, if Qualifier is OPST and Data Source Scheme is not present, Instrument Type Code must contain one of the following codes (Error code(s): K12):

AMER	American Style	Option can be exercised before or on expiry date.
EURO	European Style	Option can be exercised on expiry date only.

Codes

In option B, if Qualifier is OPTI and Data Source Scheme is not present, Instrument Type Code must contain one of the following codes (Error code(s): K12):

CALL	Call Option	A right to buy a defined quantity of an asset by a certain date at an agreed price.
PUTO	Put Option	A right to sell a defined quantity of an asset by a certain date at an agreed price.

Usage Rules

When option C is used, CFI Code must be a valid ISO CFI code.

To use the codes associated with the ISITC code for security type, /ASCT/, Data Source Scheme must be ISIT, and Instrument Code or Description must contain a valid ISITC security type code.

Example

:12C::CLAS//ESVUFR

(CFI code for equity, common share, voting rights, unrestricted, fully paid and registered.)

5	O	NXRT	N		A	Next Interest Rate
6	O	INDX	N		A	Index Factor
7	O	YTMR	N		A	Yield To Maturity Rate

Definition

This qualified generic field specifies:

CUFC	Current Factor	Rate expressed as a decimal between 0 and 1 defining the outstanding principal of the financial instrument (for factored securities).
INDX	Index Factor	Public index rate used for inflation adjustment.
INTR	Interest Rate	Annualised interest rate of a financial instrument used to calculate the actual interest rate of the coupon or the accrued interest.
NWFC	Next Factor	Rate expressed as a decimal between 0 and 1 that will be applicable as of the next factor date and defines the outstanding principal of the financial instrument (for factored securities).

NXRT	Next Interest Rate	Interest rate applicable to the next interest payment period in relation to variable rate instruments.
PRFC	Previous Factor	Rate expressed as a decimal between 0 and 1 that was applicable before the current factor and defines the outstanding principal of the financial instrument (for factored securities).
YTMR	Yield To Maturity Rate	Rate of return anticipated on a bond when held until maturity date.

Network Validated Rules

The integer part of Rate must contain at least one digit. A decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).

If Rate is zero, Sign must not be present (Error code(s): T14).

Usage Rules

Sign must be present when Rate is negative.

Except if notified differently in the rate definition, when used with format option A (:4!c/[N]15d), the rate must be expressed as a percentage, not as a decimal fraction (12% must be identified by 12, and not 0,12).

MT 502 - 40. Field 13a: Number Identification

5	O	PUTT	N		B	Puttable Flag
6	O	WRTS	N		B	Warrants Attached on Delivery Flag
7	O	ODDC	N		B	Odd Coupon Flag

Definition

This qualified generic field specifies:

CALL	Callable Flag	Indicates whether the issuer has the right to repay the financial instrument prior to maturity.
CONV	Convertible Flag	Indicates whether the financial instrument is convertible into another type of financial instrument.

COVE	Covered Flag	Indicates whether the underlying financial instrument of an option is owned by the writer of the option.
FRNF	Floating Rate Note Flag	Indicates whether the interest rate of an interest bearing instrument is reset periodically.
ODDC	Odd Coupon Flag	Indicates whether the payment of the coupon (interest) on an interest bearing instrument is off the normal schedule.
PUTT	Puttable Flag	Indicates whether the holder has the right to ask for redemption of the financial instrument prior to final maturity.
WRTS	Warrants Attached on Delivery Flag	Indicates whether the warrants on a financial instrument (which has been traded cum warrants) will be attached on delivery.

Codes

Flag must contain one of the following codes (Error code(s): K17):

N	No	No.
Y	Yes	Yes.

Definition

This qualified generic field specifies:

EXER	Exercise Price	<ol style="list-style-type: none"> 1. Price at which the security will be purchased/sold if warrant is exercised, represented either as an actual amount (option B) or a percentage (option A). 2. Price at which a bond is converted, represented either as an actual amount (option B) or a percentage (option A). 3. Strike price of an option, represented either as an actual amount (option B) or a percentage (option A).
INDC	Indicative Price	Estimated price, for example, for valuation purposes.
MRKT	Market Price	Last reported/known price of a financial instrument in a market.

Codes

In option A, Percentage Type Code must contain one of the following codes (Error code(s): K90):

DISC	Discount	Price expressed as the number of percentage points below par, for example, a discount price of 2.0% equals a price of 98 when par is 100.
PRCT	Percentage	Price expressed as a percentage of par.
PREM	Premium	Price expressed as the number of percentage points above par, for example, a premium price of 2.0% equals a price of 102 when par is 100.
YIEL	Yield	Price expressed as a yield.

Codes

In option B, Amount Type Code must contain one of the following codes (Error code(s): K90):

ACTU	Actual Amount	Price expressed as an amount of currency per unit or per share.
DISC	Discount	Price expressed as a discount amount.
PREM	Premium	Price expressed as a premium.

Network Validated Rules

Currency Code must be a valid ISO 4217 currency code (Error code(s): T52).

The integer part of Price must contain at least one digit. A decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).

Sign may only be present if Percentage Type Code is YIEL (Error code(s): T69).

If Price is zero, Sign must not be present (Error code(s): T14).

Usage Rules

The number of decimal digits in Price is not validated against the currency specified.

Sign must be present when Price is negative.

1	O	MINO	N		B or D	Minimum Nominal Quantity
2	O	SIZE	N		B or D	Contract Size
3	O	ORGV	N		B	Original Face Amount

Definition

This qualified generic field specifies:

MINO	Minimum Nominal Quantity	Minimum nominal quantity of financial instrument.
ORGV	Original Face Amount	Original par or nominal value of a financial instrument.
SIZE	Contract Size	Ratio or multiplying factor used to convert one contract into a financial instrument quantity.

Codes

In option B, if Qualifier is MINO or Qualifier is SIZE, Quantity Type Code must contain one of the following codes (Error code(s): K36):

AMOR	Amortised Value	Quantity expressed as an amount representing the current amortised face amount of a bond, for example, a periodic reduction/increase of a bond's principal amount.
FAMT	Face Amount	Quantity expressed as an amount representing the face amount, that is, the principal, of a debt instrument.
UNIT	Unit Number	Quantity expressed as a number, for example, a number of shares.

Codes

In option D, Quantity Type Code must contain the following code (Error code(s): K36):

DITU	Digital Token Unit Number	Quantity of digital token expressed as a number, for example, a number of blockchain tokens.
------	---------------------------	--

Codes

In option B, if Qualifier is ORGV, Quantity Type Code must contain the following code (Error code(s): K36):

FAMT	Face Amount	Quantity expressed as an amount representing the face amount, that is, the principal, of a debt instrument.
------	-------------	---

Network Validated Rules

The integer part of Quantity must contain at least one digit. A decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).

Usage Rules

Format option D may only be used when the related account information in subsequence B2 field : 97D::BCAW is present.

MT 502 - 44. Field 35B: Identification of the Financial Instrument

Format

Option B	[ISIN!e12!c] [4*35x]	(Identification of Security) (Description of Security)
----------	-------------------------	---

Presence

Optional in optional subsequence B3

Definition

This field identifies the underlying financial instrument.

Network Validated Rules

At least Identification of a Security (Subfield 1) or Description of Security (Subfield 2) must be present; both may be present (Error code(s): T17).

ISIN is used at the beginning of Identification of Security (Subfield 1) and must be composed of uppercase letters only (Error code(s): T12).

Usage Rules

The financial Instrument field 35B in the Financial Instrument Attributes subsequence must only be used for the identification of the underlying instrument (s) of a derivative. It must not be used, for example, for the listing of the underlying securities of an index.

When used in Description of Security (Subfield 2), codes must start and end with a slash '/'.

When an ISIN identifier is not used it is strongly recommended that one of the following codes be used as the first characters of the Description of Security (Subfield 2):

[/2!a/]	The ISO two-digit country code, followed by the national scheme number.
---------	---

- [/TS/] Followed by the ticker symbol.
- [/XX/] Bilaterally agreed or proprietary scheme which may be further identified by a code or short description identifying the scheme used.
- [/4!c/] Code identifying the type of security identifier used. This code must be one published by ISO 20022 (ExternalFinancialInstrumentIdentificationTypeCode).

It is strongly recommended that the ISIN be used.

Example

An ISIN will be identified as follows:

:35B:ISIN US0123456704

A SEDOL will be identified as follows:

:35B:/GB/0123456

A CUSIP will be identified as follows:

:35B:/US/012345670

A proprietary scheme will be identified as follows:

:35B:/XX/SCHEMEUSED 0123456700

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	VALU	N		A or C	Value Date/Time

Definition

This qualified generic field specifies:

VALU	Value Date/Time	Date/time at which cash becomes available to the account owner (in a credit entry), or cease to be available to the account owner (in a debit entry).
------	-----------------	---

Network Validated Rules

Date must be a valid date expressed as YYYYMMDD (Error code(s): T50).

Presence

Optional in optional subsequence C3

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	EXCH	N	C1	B	Exchange Rate

Definition

This qualified generic field specifies:

EXCH Exchange Rate Exchange rate between the amount and the resulting amount.

Network Validated Rules

First Currency Code and Second Currency Code must be valid ISO 4217 currency codes (Error code(s): T52).

The integer part of Rate must contain at least one digit. A decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).

Usage Rules

The order of the two currencies specified here is independent of the currencies in the amount and resulting amount fields. Therefore the exchange rate can be expressed as a reciprocal if required.

For the calculation of the rate itself, the First Currency Code will be the base currency and the Second Currency Code will be the quoted currency (1,00 of First Currency Code = [Rate] of Second Currency Code).

Example

The exchange rate between US dollars and pound sterling can be shown as:

:92B::EXCH//GBP/USD/1,619 (1,00 GBP = 1,619 USD)

or as

:92B::EXCH//USD/GBP/0,618 (1,00 USD = 0,618 GBP)

Codes

In option S, if Qualifier is ALTE and Data Source Scheme is not present, Type of ID must contain one of the following codes (Error code(s): K95):

ARNU	Alien Registration Number	Number assigned by a government agency to identify foreign nationals.
CCPT	Passport Number	Number assigned by a passport authority.
CHTY	Tax Exempt Identification Number	Number assigned to a tax exempt entity.
CORP	Corporate Identification	Number assigned to a corporate entity.
DRLC	Driver's Licence Number	Number assigned to a driver's licence.
FIIN	Foreign Investment Identity Number	Number assigned to a foreign investor (other than the alien number).
TXID	Tax Identification Number	Number assigned by a tax authority to an entity.

Network Validated Rules

Country Code must be a valid ISO country code (Error code(s): T73).

Identifier Code must be a registered BIC (Error code(s): T27, T28, T29, T45).

Proprietary code (Format Option R), Alternate ID (Format Option S) and Name and Address (Format Option Q) must not start or end with a slash '/' and must not contain two consecutive slashes '//'. For field formats with more than 1 line, the rule applies for each line (Error code(s): T26).

Usage Rules

In option R, Proprietary Code specifies a local national code or market segment code identifying the party.

In option S:

- Type of ID specifies the type of alternate identification that can be used to give an alternate identification of the party identified in this sequence.
- Country Code specifies the country for which the alternate identification is relevant.

- Alternate ID specifies an alternate identification of the party identified in this sequence.

Codes

If Qualifier is RERT and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

FIXE	Fixed	Rate is fixed.
FORF	Forfeit	No specific rate applies to the transaction, only a forfeit.
VARI	Variable	Rate is variable.

Codes

If Qualifier is MICO and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

A001	30/360 (ISDA) or 30/360 (American Basic Rule)	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February, and provided that the interest period started on a 30th or a 31st. This means that a 31st is assumed to be a 30th if the period started on a 30th or a 31st and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). It is the most commonly used 30/360 method for US straight and convertible bonds.
A002	30/365	Method whereby interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and a 365-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th).
A003	30/Actual	Method whereby interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and the assumed number of days in a year in a way similar to the Actual/Actual (ICMA). Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). The assumed number of days in a year is computed as the actual number of days in the coupon period multiplied by the number of interest payments in the year.
A004	Actual/360	Method whereby interest is calculated based on the actual number of accrued days in the interest period and a 360-day year.
A005	Actual/365 (Fixed)	Method whereby interest is calculated based on the actual number of accrued days in the interest period and a 365-day year.

A006	Actual/Actual (ICMA)	Method whereby interest is calculated based on the actual number of accrued days and the assumed number of days in a year, that is, the actual number of days in the coupon period multiplied by the number of interest payments in the year. If the coupon period is irregular (first or last coupon), it is extended or split into quasi interest periods that have the length of a regular coupon period and the computation is operated separately on each quasi interest period and the intermediate results are summed up.
A007	30E/360 or Eurobond basis	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be equivalent to a 30 Feb. However, if the last day of the maturity coupon period is the last day of February, it will not be assumed to be a 30th. It is a variation of the 30/360 (ICMA) method commonly used for eurobonds. The usage of this variation is only relevant when the coupon periods are scheduled to end on the last day of the month.
A008	Actual/Actual (ISDA)	Method whereby interest is calculated based on the actual number of accrued days of the interest period that fall on a normal year, divided by 365, added to the actual number of days of the interest period that fall on a leap year, divided by 366.
A009	Actual/365L or Actual/Actual (basic rule)	Method whereby interest is calculated based on the actual number of accrued days and a 365-day year (if the coupon payment date is NOT in a leap year) or a 366-day year (if the coupon payment date is in a leap year).
A010	Actual/Actual (AFB)	Method whereby interest is calculated based on the actual number of accrued days and a 366-day year (if 29 Feb falls in the coupon period) or a 365-day year (if 29 Feb does not fall in the coupon period). If a coupon period is longer than one year, it is split by repetitively separating full year sub-periods counting backwards from the end of the coupon period (a year backwards from a 28 Feb being 29 Feb, if it exists). The first of the sub-periods starts on the start date of the accrued interest period and thus is possibly shorter than a year. Then the interest computation is operated separately on each sub-period and the intermediate results are summed up.
A011	30/360 (ICMA) or 30/360 (basic rule)	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). It is the most commonly used 30/360 method for non-US straight and convertible bonds issued before 01/01/1999.

A012	30E2/360 or Eurobond basis model 2	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for the last day of February whose day of the month value shall be adapted to the value of the first day of the interest period if the latter is higher and if the period is one of a regular schedule. This means that a 31st is assumed to be a 30th and the 28th Feb of a non-leap year is assumed to be equivalent to a 29th Feb when the first day of the interest period is a 29th, or to a 30th Feb when the first day of the interest period is a 30th or a 31st. The 29th Feb of a leap year is assumed to be equivalent to a 30th Feb when the first day of the interest period is a 30th or a 31st. Similarly, if the coupon period starts on the last day of February, it is assumed to produce only one day of interest in February as if it was starting on a 30th Feb when the end of the period is a 30th or a 31st, or two days of interest in February when the end of the period is a 29th, or 3 days of interest in February when it is the 28th Feb of a non-leap year and the end of the period is before the 29th.
A013	30E3/360 or Eurobond basis model 3	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be equivalent to a 30 Feb. It is a variation of the 30E/360 (or Eurobond basis) method where the last day of February is always assumed to be a 30th, even if it is the last day of the maturity coupon period.
A014	Actual/365NL or Actual/365 No Leap	Method whereby interest is calculated based on the actual number of accrued days in the interest period, excluding any leap day from the count, and a 365-day year.
OTHR	Other	Other method than A001-A014. See Narrative.

6	O	SHAI	N		A	Securities Haircut

Definition

This qualified generic field specifies:

PRIC	Pricing Rate	Interest rate to be paid on the transaction amount, as agreed between the counterparties.
REPO	Repurchase Rate	Repurchase rate used to calculate the repurchase amount.
RSPR	Spread Rate	Margin over or under an index that determines the repurchase rate.
SHAI	Securities Haircut	Haircut or valuation factor on the security expressed as a percentage.
SLMG	Stock Loan Margin	Percentage mark-up on a loan consideration used to reflect the lender's risk.
VASU	Variable Rate Support	Index or support rate used together with the spread to calculate the repurchase rate.

Network Validated Rules

The integer part of Rate must contain at least one digit. A decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).

If Rate is zero, Sign must not be present (Error code(s): T14).

Usage Rules

In option C, Rate Name specifies the reference rate or basis rate on which a variable rate is based (ex: EONIA, EURIBOR, LIBOR, FEFUND, EURREPO).

Sign must be present when Rate is negative.

Except if notified differently in the rate definition, when used with format option A (:4!c//[N]15d), the rate must be expressed as a percentage, not as a decimal fraction (12% must be identified by 12, and not 0,12).

6	O	TAPC	N		A	Termination Amount per Piece of Collateral

Definition

This qualified generic field specifies:

ACRU	Accrued Interest Amount	Amount of interest that has been accrued in between two periods (for second leg).
DEAL	Deal Amount	Principal amount of a trade (for second leg).
FORF	Forfeit Amount	Fixed amount of money that has to be paid (instead of interest) in the case of a recall or at the closing date.
REPP	Premium Amount	Difference between the amount of money of the first leg and the amount of the second leg of the transaction.
TAPC	Termination Amount per Piece of Collateral	Amount of money to be settled per piece of collateral to terminate the transaction.
TRTE	Termination Transaction Amount	Total amount of money to be settled to terminate the transaction.

Network Validated Rules

The integer part of Amount must contain at least one digit. A decimal comma is mandatory and is included in the maximum length. The number of digits following the comma must not exceed the maximum allowed for the specified currency (Error code(s): C03, T40, T43).

Currency Code must be a valid ISO 4217 currency code (Error code(s): T52).

If Amount is zero, Sign must not be present (Error code(s): T14).

MT 503 Collateral Claim

Note *The use of this message type requires Message User Group (MUG) registration.*

Important The user header of the message (block 3) is mandatory and must contain a code in the Validation Flag field 119 ({3:{119:xxxx}}) to identify the exposure type or collateral reason.

These codes may be used for routing purposes.

MT 503 Scope

This message is sent by the collateral taker or its collateral manager to the collateral giver or its collateral manager. This message is also sent by the collateral giver or its collateral manager to the collateral taker or its collateral manager.

When sent by the taker, it is used to:

- request new collateral at the initiation of an exposure
- request additional collateral

When sent by the giver, it is used to:

- request the return of collateral
- recall the collateral upon the termination of an underlying exposure.

This message is also used by the taker or the giver to request the cancellation of a previously sent collateral claim.

This message must not be used to initiate a substitution of collateral.

The message may also be used to:

- re-send a message previously sent (Subfunction of the message is DUPL)
- provide a third party with a copy of the message for information (Subfunction of the message is COPY)
- re-send to a third party a copy of the message for information (Subfunction of the message is CODU).

MT 503 Format Specifications

The collateral claim consists of three sequences:

- Sequence A General Information provides general information about the message and the collateral transaction, that is, the function of the message, the identification of the collateral transaction, the references of the linked messages, the identification of the underlying agreement(s), the identification of the parties, the reason for which collateral is needed (the exposure type), the identification of the collateral action and the contact information.

Note *More than one occurrence of the agreement is only authorised for cross-product collateralisation and when no overall master agreement is in place yet.*

- Sequence B Summary provides information related to the collateral position, that is, the identification of the exposed party, the total exposure amount, the total collateral amount held by the taker, the value of collateral to be added to or to be returned from the collateral held. The sequence contains an optional subsequence with the amounts taken into account to calculate the collateral position. These amounts are required for certain types of exposures. The subsequence also contains the valuation dates and the requested settlement date of the collateral.

- Optional sequence C specifies the details of the collateral claimed. It is used by the taker only if the taker wants to receive specific collateral. It is used by the giver to specify the collateral it wants to pull out of the collateral held by the taker. The collateral can be securities, cash, documentary credits or bank guarantees.

MT 503 Usage Rules

The exchange of information related to the trade itself as well as to the settlement of the collateral is done with the existing confirmation and settlement messages of the relevant categories (categories 2, 3, 5, 7, 9).

MT 503 Guidelines

When the total exposure covers several exposures in different currencies, the currency of sequence B is usually the reporting currency. When the total exposure covers one or more exposures in the same currency, either this currency or the reporting currency is used in sequence B.

The code identifying the exposure type or collateral reason in the user header of the message (block 3) must be identical to the code contained in field :22a: :COLA//xxxx (Exposure Type Indicator) in sequence A of the message content (text block 4).

The collateral management process is initiated every time a new exposure is created, that is, when a new trade relationship is established. Also, membership of a clearing system usually requires the posting of collateral before clearing can start. This provides a guarantee that the member will honour its obligations.

The type of institutions involved in collateral management and who can send and/or receive collateral messages are:

- clearing, netting, RTGS systems
- central banks
- institutional investors
- fund managers
- custodians
- local authorities
- corporates
- banks
- third party service providers
- exchanges

Collateral can be claimed for the following reasons or products:

- payments/settlements
- credit lines
- FX and derivatives trading
- repo trading
- securities lending and borrowing
- cross-product, that is, combining collateral needs issued from different types of trades.

The types of collateral that can be proposed are:

- securities
- cash
- letters of credit and bank guarantees (only for bilateral collateral management)

A collateral claim can be sent:

- At initiation time, when the initiative is taken by the taker, a collateral claim is sent asking the giver to post collateral. The claim provides the exposure amount and the value of collateral required. The taker can also include the details of the collateral he wants.

- When a new exposure is created by a variation in the value of the exposure, in the value of the collateral or in both values.
 - The taker will send a claim for additional collateral to be posted by the giver when his exposure vis-à-vis the giver increases, either because of additional exposure, increase of value of the existing exposure, decrease of value of the posted, or several of these occur.
 - The giver will send a collateral claim to the taker containing the details of the collateral to be returned, when the exposure from the taker vis-à-vis the giver decreases, either because of diminished exposure, decrease of value of the existing exposure, increase of value of the posted exposure or several of these occur.
 - When the exposure changes sides, that is, the 'former taker' is no longer exposed to the 'former giver' but the roles are reversed so that the 'former taker' becomes the new giver and the 'former giver' becomes the new taker. The (new) taker will send a claim for the return of his collateral. The same message will contain the details of the call for new collateral.
- At termination time, when the exposure between the parties has disappeared completely. This happens for instance when a trade has reached maturity or when parties have decided to stop trading altogether or when an institution pulls out of a clearing system. The giver will send a message claiming all posted collateral.

Industry Requirements

ISDA Definitions

Credit Support Amount

Unless modified by the parties, the Credit Support Amount is generally the amount of Eligible Credit Support that the Secured Party is entitled to hold as of a particular Valuation Date.

The Credit Support Amount is usually defined as:

- the Secured Party's Exposure; **plus**
- the aggregate of all Independent Amounts applicable to the **Pledgor**, if any; **minus**
- the aggregate of all Independent Amounts applicable to the **Secured Party**, if any, **minus**
- the **Pledgor's Unsecured Threshold**.

The Credit Support Amount, however, is deemed to be zero whenever its calculation would yield a number less than zero.

Independent Amount

An Independent Amount is an amount that may be used as an add-on to Exposure which can reflect, among other things, the volatility of a particular Transaction or credit concerns relating to one or both counterparties.

When an Independent Amount is applicable to a party, it increases the Credit Support Amount that is applicable when the other party is the Secured Party and decreases the Credit Support Amount that is applicable when that party is the Secured Party.

However, some parties may wish to modify the Credit Support Amount formula specified above to eliminate the subtraction of Independent Amounts applicable to the Secured Party. In this case, the Independent Amount represents the **minimum** Credit Support Amount when that party is a Credit Support Taker.

For example, Credit Support Amount may be defined as:

- the Secured Party's Exposure; **plus**
- the aggregate of all Independent Amounts applicable to the **Pledgor**, if any, **minus**
- the **Pledgor's Unsecured Threshold**.

Provided that in the case where the sum of the Independent Amounts applicable to the Pledgor exceeds zero, the Credit Support Amount will not be less than the sum of all Independent Amounts applicable to the Pledgor. In all other cases, the Credit Support Amount will be deemed to be zero whenever the calculation of Credit Support Amount yields an amount less than zero.

Hence, in the Collateral Messages, Independent Amounts should default to be treated as nettable unless being explicitly stated as being **non-netted**.

Basic Amount

The Basic Amount with respect to any one party represents the minimum value of Posted Credit Support required at all times from a counterparty independently of any exposure.

Basic Amounts are not subject to any form of netting with Delivery or Return Amounts.

Thresholds

The Threshold generally represents the amount of unsecured risk (measured by the Secured Party's Exposure and the aggregate of any Independent Amounts due, if any) that a party is willing to tolerate without holding any Posted Credit Support provided by the other party.

Generally, under the standard definition of Credit Support Amount, the unsecured threshold is deducted from the current exposure in order to arrive at the Credit Support Amount required for a particular Valuation Date.

Alternatively, given the flexibility provided under ISDA documentation, the parties can agree to vary the Credit Support Amount definition so that when the exposure is greater than the threshold, the Credit Support Amount is calculated without any deduction of the unsecured Threshold, that is, Credit Support Amount = the entire Secured Party's exposure.

Such a threshold arrangement is commonly referred to by the market as a SECURED Threshold since, once breached, the whole exposure is effectively offset by Posted Credit Support.

EXAMPLE - reporting currency is USD

Total Exposure Amount	25,000,090 USD
Adjusted Exposure Amount (based on bilateral agreements)	25,000,090 USD
Netted Independent Amount	1,000,000 USD
Unsecured Threshold Amount	2,000,000 USD
<i>Subtotal</i>	<i>24,000,090 USD</i>
Basic Amount	0
<i>Credit Support Amount</i>	<i>24,000,090 USD</i>
Value of Collateral Held	15,384,615 USD

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
3	O	RCTR	N	C2	C	Receiver's Collateral Transaction Reference

Definition

This qualified generic field specifies:

RCTR	Receiver's Collateral Transaction Reference	Unique reference identifying the collateral management transaction from the Receiver's point of view.
SCTR	Sender's Collateral Transaction Reference	Unique reference identifying the collateral management transaction from the Sender's point of view.
SEME	Sender's Message Reference	Reference assigned by the Sender to unambiguously identify the message.

Network Validated Rules

Reference must not start or end with a slash '/' and must not contain two consecutive slashes '/' (Error code(s): T26).

Usage Rules

For qualifiers SCTR and RCTR:

- If both the Sender's and the Receiver's Collateral Transaction References are available, they both must be included.
- The Collateral Transaction Reference can be a deal reference when the collateral management is done on a per deal basis.

Option B :4!c//3!a15d (Qualifier) (Currency Code) (Amount)

Presence

Optional (referenced in rule C9) in optional subsequence B1

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	THRS	N		B	Secured Threshold Amount
	or	THRU	N		B	Unsecured Threshold Amount
2	O	PRHA	N		B	Pre-haircut Collateral Value Amount
3	O	AEXP	N		B	Adjusted Exposure Amount
4	O	CORE	N		B	Collateral Required Amount
5	O	RADD	N		B	Basic Amount
6	O	NRAD	N		B	Netted Independent Amount
7	O	MITR	N		B	Minimum Transfer Amount
8	O	ROUN	N		B	Rounding Integer Amount

Definition

This qualified generic field specifies:

AEXP	Adjusted Exposure Amount	Total amount of collateral required (unrounded).
CORE	Collateral Required Amount	Total amount of collateral required (rounded).
MITR	Minimum Transfer Amount	Minimum additional collateral amount required above the collateral held.
NRAD	Netted Independent Amount	Non recoverable add-on amount to the exposure.
PRHA	Pre-haircut Collateral Value Amount	Total value of posted collateral (pre-haircut) held by the taker prior to the collateral claim.
RADD	Basic Amount	Recoverable add-on amount to the exposure.
ROUN	Rounding Integer Amount	Amount to which the value of the collateral collected may be rounded up.
THRS	Secured Threshold Amount	Amount of secured risk the exposed party is willing to tolerate. If the exposure is bigger than this amount, the whole exposure needs to be offset otherwise no collateral is needed.
THRU	Unsecured Threshold Amount	Amount for which the exposed party doesn't have to post collateral. The difference between the total exposure amount and this amount needs to be collateralised.

Network Validated Rules

The integer part of Amount must contain at least one digit. The decimal comma is mandatory and is included in the maximum length. The number of digits following the comma must not exceed the maximum allowed for the specified currency (Error code(s): C03, T40, T43).

Currency Code must be a valid ISO 4217 currency code (Error code(s): T52).

Usage Rules

See also the ISDA definitions in the Usage Rules section for a more detailed explanation of the amount fields and examples.

Example 3: Repo Trading

BNKACALA and BNKBCBLB have agreed on a Repo. Bank A provides the cash and receives securities from Bank B as collateral.

The confirmation of the deal was done at trade date with the MTs 5nn, TIC series (Trade Initiation and Confirmation messages).

During the lifetime of the deal, the posted securities have diminished in value. Bank A will claim additional collateral.

MT 504 Collateral Proposal

Note *The use of this message type requires Message User Group (MUG) registration.*

Important The user header of the message (block 3) is mandatory and must contain a code in the Validation Flag field 119 ({3:{119:xxxx}}) to identify the exposure type or collateral reason.

These codes may be used for routing purposes.

MT 504 Scope

This message is sent by the collateral giver or its collateral manager to the collateral taker or its collateral manager to:

- propose new collateral at the initiation of an exposure
- propose additional collateral at variation of exposure

This message may or may not be sent as an answer to a collateral claim.

This message is also used by the giver to request the cancellation of a previously sent collateral proposal.

This message must not be used to initiate a substitution.

The message may also be used to:

- re-send a message previously sent (Subfunction of the message is DUPL)
- provide a third party with a copy of the message for information (Subfunction of the message is COPY)
- re-send to a third party a copy of the message for information (Subfunction of the message is CODU).

MT 504 Format Specifications

The collateral proposal consists of five sequences:

- Sequence A General Information provides general information about the message and the collateral transaction, that is, the function of the message, the identification of the collateral transaction, the references of the linked messages, the identification of the underlying agreement(s), the identification of the parties, the reason for which collateral is needed (the exposure type), the identification of the collateral action and the contact information.

Note *More than one occurrence of the agreement is only authorised for cross-product collateralisation and when no overall master agreement is in place yet.*

- Sequence B Summary provides information related to the collateral position, that is, the identification of the exposed party, the total exposure amount, the total collateral amount held by the taker, the value of collateral to be added to or to be returned from the collateral held. The sequence contains an optional subsequence with the amounts taken into account to calculate the collateral position. These amounts are required for certain types of exposures. This subsequence also contains the valuation dates and the requested settlement date of the collateral.
- Sequence C specifies the details of the proposed collateral. The collateral can be securities, cash or other collateral. Other collateral indicates trade instruments, that is, documentary credits and bank guarantees. This sequence may also contain the settlement details for a piece of security or cash collateral. If the settlement details for all pieces of proposed securities collateral are the same, these details are not present in this sequence, but included once in sequence D. If the settlement details for

all pieces of proposed cash collateral are the same, these details are not present in this sequence, but included once in sequence E.

- Sequence D contains the common securities settlement details, that is, the settlement details of the proposed securities when they are not included in sequence C at the level of the individual piece of collateral.
- Sequence E contains the common cash settlement details, that is, the settlement details of the proposed cash when they are not included in sequence C at the level of the individual piece of collateral.

C19 In subsequence B1, fields 16R and 16S may not be the only fields present. If both fields 16R and 16S are present, then at least one of the other fields of the same subsequence must be present (Error code(s): D13).

C20 The user header of the message (block 3) is mandatory and must contain a valid code in the Validation Flag field 119 ({3:{119:xxxx}}). This code must be identical to the code contained in field :22a::COLA//xxxx (Exposure Type Indicator) in sequence A of the message content (text block 4) (Error code(s): C94).

MT 504 Usage Rules

The exchange of information related to the trade itself as well as to the settlement of the collateral is done with the existing confirmation and settlement messages of the relevant categories (categories 2, 3, 5, 7, 9).

MT 504 Guidelines

When the total exposure covers several exposures in different currencies, the currency of sequence B is usually the reporting currency. When the total exposure covers one or more exposures in the same currency, either this currency or the reporting currency is used in sequence B.

The code identifying the exposure type or collateral reason in the user header of the message (block 3) must be identical to the code contained in field :22a::COLA//xxxx (Exposure Type Indicator) in sequence A of the message content (text block 4). These codes may be used for routing purposes.

The collateral management process is initiated every time a new exposure is created, that is, when a new trade relationship is established. Also, membership of a clearing system usually requires the posting of collateral before clearing can start. This provides a guarantee that the member will honour its obligations.

The type of institutions involved in collateral management and who can send and/or receive collateral messages are:

- clearing, netting, RTGS systems
- central banks
- institutional investors
- fund managers
- custodians
- local authorities
- corporates
- banks

- third party service providers
- exchanges

Collateral can be proposed for the following reasons or products:

- payments/settlements
- credit lines
- FX and derivatives trading
- repo trading
- securities lending and borrowing
- cross-product, that is, combining collateral needs issued from different types of trades

The types of collateral that can be proposed included in this message are:

- securities
- cash
- letters of credit and bank guarantees (only for bilateral collateral management)

A collateral proposal can be sent:

- At initiation time, when the initiative is taken by the giver, a collateral proposal is sent to the taker containing the details of the proposed collateral together with the exposure amount and the value of collateral required.

When the initiative is taken by the taker, the giver may answer to his claim with a collateral proposal.

- When a new exposure is created by a variation in the value of the exposure, in the value of the collateral or in both values.

The taker will send a claim for additional collateral to be posted by the giver when his exposure vis-à-vis the giver increases, either because of additional exposure, increase of value of the existing exposure, decrease of value of the posted, or several of these occur.

The giver may answer to his claim with a collateral proposal.

Industry Requirements

ISDA Definitions

Credit Support Amount

Unless modified by the parties, the Credit Support Amount is generally the amount of Eligible Credit Support that the Secured Party is entitled to hold as of a particular Valuation Date.

The Credit Support Amount is usually defined as:

- the Secured Party's Exposure; **plus**
- the aggregate of all Independent Amounts applicable to the **Pledgor**, if any; **minus**
- the aggregate of all Independent Amounts applicable to the **Secured Party**, if any, **minus**
- the **Pledgor's Unsecured Threshold**.

The Credit Support Amount, however, is deemed to be zero whenever its calculation would yield a number less than zero.

Independent Amount

An Independent Amount is an amount that may be used as an add-on to Exposure which can reflect, among other things, the volatility of a particular Transaction or credit concerns relating to one or both counterparties.

When an Independent Amount is applicable to a party, it increases the Credit Support Amount that is applicable when the other party is the Secured Party and decreases the Credit Support Amount that is applicable when that party is the Secured Party.

However, some parties may wish to modify the Credit Support Amount formula specified above to eliminate the subtraction of Independent Amounts applicable to the Secured Party. In this case, the Independent Amount represents the **minimum** Credit Support Amount when that party is a Credit Support Taker.

For example, Credit Support Amount may be defined as:

- the Secured Party's Exposure; **plus**
- the aggregate of all Independent Amounts applicable to the **Pledgor**, if any, **minus**
- the **Pledgor's Unsecured Threshold**.

Provided that in the case where the sum of the Independent Amounts applicable to the Pledgor exceeds zero, the Credit Support Amount will not be less than the sum of all Independent Amounts applicable to the Pledgor. In all other cases, the Credit Support Amount will be deemed to be zero whenever the calculation of Credit Support Amount yields an amount less than zero.

Hence, in the Collateral Messages, Independent Amounts should default to be treated as nettable unless being explicitly stated as being **non-netted**.

Basic Amount

The Basic Amount with respect to any one party represents the minimum value of Posted Credit Support required at all times from a counterparty independently of any exposure.

Basic Amounts are not subject to any form of netting with Delivery or Return Amounts.

Thresholds

The Threshold generally represents the amount of unsecured risk (measured by the Secured Party's Exposure and the aggregate of any Independent Amounts due, if any) that a party is willing to tolerate without holding any Posted Credit Support provided by the other party.

Generally, under the standard definition of Credit Support Amount, the unsecured threshold is deducted from the current exposure in order to arrive at the Credit Support Amount required for a particular Valuation Date.

Alternatively, given the flexibility provided under ISDA documentation, the parties can agree to vary the Credit Support Amount definition so that when the exposure is greater than the threshold, the Credit Support Amount is calculated without any deduction of the unsecured Threshold, that is, Credit Support Amount = the entire Secured Party's exposure.

Such a threshold arrangement is commonly referred to by the market as a SECURED Threshold since, once breached, the whole exposure is effectively offset by Posted Credit Support.

EXAMPLE - reporting currency is USD

Total Exposure Amount	25,000,090 USD

MT 504 - 2. Field 20C: Reference

Format

Option C :4!c//16x (Qualifier) (Reference)

Presence

Mandatory in mandatory sequence A

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	M	SEME	N		C	Sender's Message Reference
2	O	SCTR	N	C2	C	Sender's Collateral Transaction Reference
3	O	RCTR	N	C2	C	Receiver's Collateral Transaction Reference

Definition

This qualified generic field specifies:

RCTR	Receiver's Collateral Transaction Reference	Unique reference identifying the collateral management transaction from the Receiver's point of view.
SCTR	Sender's Collateral Transaction Reference	Unique reference identifying the collateral management transaction from the Sender's point of view.
SEME	Sender's Message Reference	Reference assigned by the Sender to unambiguously identify the message.

Network Validated Rules

Reference must not start or end with a slash '/' and must not contain two consecutive slashes '/' (Error code(s): T26).

Usage Rules

For qualifiers SCTR and RCTR:

- If both the Sender's and the Receiver's Collateral Transaction References are available, they both must be included.
- The Collateral Transaction Reference can be a deal reference when the collateral management is done on a per deal basis.

MT 504 - 3. Field 23G: Function of the Message

Format

Option G 4!c[/4!c] (Function) (Subfunction)

Presence

Mandatory (referenced in rule C1) in mandatory sequence A

Definition

This field identifies the function of the message.

Codes

Function must contain one of the following codes (Error code(s): T86):

CANC	Cancellation Request	Message requesting the cancellation of a previously sent message.
NEWM	New	New message.

Codes

Subfunction, when present, must contain one of the following codes (Error code(s): T85):

CODU	Copy Duplicate	Message is a copy to a party other than the account owner/account servicer, for information purposes and the message is a duplicate of a message previously sent.
COPY	Copy	Message is a copy to a party other than the account owner/account servicer, for information purposes.
DUPL	Duplicate	Message is for information/confirmation purposes. It is a duplicate of a message previously sent.

Usage Rules

To cancel a previously sent proposal, Function is CANC. The reference in the previous reference field must contain the Sender's Reference of the message to be cancelled. A copy of at least the mandatory fields of the message to be cancelled must be present; optional fields need not be present for SWIFT validation.

CHAR	Charges Account	Account to be used for charges/fees if different from the account for payment.
COMM	Commission Account	Account to be used for commission if different from the account for payment and which is held by the party specified in this sequence.
TAXE	Tax Account	Account to be used for taxes if different from the account for payment and which is held by the party specified in this sequence.

Usage Rules

The account provided is the account of the party specified in this sequence.

MT 504 - 77. Field 70C: Narrative: Party Narrative

Format

Option C	:4!c//4*35x	(Qualifier) (Narrative)
----------	-------------	-------------------------

Presence

Optional in conditional (see rule C17) subsequence E1

Definition

This qualified generic field specifies:

MEOR	Originator of Message	Party that originated the message, if other than the Sender.
MERE	Recipient of Message	Party that is the final destination of the message, if other than the Receiver.

Network Validated Rules

Identifier Code must be a registered BIC (Error code(s): T27, T28, T29, T45).

Proprietary code (Format Option R) and Name and Address (Format Option Q) must not start or end with a slash '/' and must not contain two consecutive slashes '//'. For field formats with more than 1 line, the rule applies for each line (Error code(s): T26).

Usage Rules

In option R, Proprietary Code specifies a local national code or market segment code identifying the party.

MT 504 - 82. Field 16S: End of Block

Format

Option S 16c

Presence

Mandatory in optional sequence F

Definition

This field specifies the end of a block and the name of that block.

Codes

This field must contain the following code (Error code(s): T92):

MT 505 Collateral Substitution

Note *The use of this message type requires Message User Group (MUG) registration.*

Important The user header of the message (block 3) is mandatory and must contain a code in the Validation Flag field 119 ({3:{119:xxxx}}) to identify the exposure type or collateral reason. These codes may be used for routing purposes.

MT 505 Scope

This message is sent by the collateral giver or its collateral manager to the collateral taker or its collateral manager to propose the substitution of collateral held.

This message is also sent by the collateral taker or its collateral manager to the collateral giver or its collateral manager to request the substitution of collateral held.

This message is also used by the giver or taker to request the cancellation of a previously sent collateral substitution.

The message may also be used to:

- re-send a message previously sent (Subfunction of the message is DUPL)
- provide a third party with a copy of the message for information (Subfunction of the message is COPY)
- re-send to a third party a copy of the message for information (Subfunction of the message is CODU).

MT 505 Format Specifications

The substitution consists of four sequences:

- Sequence A General Information provides general information about the message and the collateral transaction, that is, the function of the message, the identification of the collateral transaction, the references of the linked messages, the identification of the underlying agreement(s), the identification of the parties, the reason for which collateral is needed, the exposure type and the contact information.

Note *More than one occurrence of the agreement is only authorised for cross-product collateralisation and when there is no overall master agreement in place yet.*

- Sequence B specifies the details of both the collateral to be substituted and the new collateral. The collateral can be securities, cash or other collateral. The other collateral indicates trade instruments, that is, documentary credits and bank guarantees. This sequence may also contain the settlement details for a piece of security or cash collateral. If the settlement details for all pieces of securities collateral are the same, these details are not present in this sequence, but included once in sequence C. If the settlement details for all pieces of cash collateral are the same, these details are not present in this sequence, but included once in sequence D.
- Sequence C contains the common securities settlement details, that is the settlement details of the proposed securities when they are not included in sequence B at the level of the individual piece of collateral.
- Sequence D contains the common cash settlement details, that is the settlement details of the proposed cash when they are not included in sequence B at the level of the individual piece of collateral.

C17 The user header of the message (block 3) is mandatory and must contain a valid code in the Validation Flag field 119 ({3:{119:xxxx}}). This code must be identical to the code contained in field :22a::COLA//xxxx (Exposure Type Indicator) in sequence A of the message content (text block 4) (Error code(s): C94).

MT 505 Usage Rules

- The substitution of collateral can be done with one message: a substitution message contains both the collateral to be taken out from the collateral held and the proposed new collateral.
- The substitution can also be done in two steps: a first message is sent with only the details of the collateral to be pulled out and a second message is sent afterwards with the proposed new collateral. This is done when the giver wants to substitute collateral but doesn't know what collateral he will use at the moment of sending the first message.
- When the taker requests the substitution, he will usually send a message containing only the collateral to be pulled out. The giver will then send a substitution message with the proposed new collateral.
- The exchange of information related to the trade itself as well as to the settlement of the collateral is done with the existing confirmation and settlement messages of the relevant categories (categories 2, 3, 5, 7, 9).

MT 505 Guidelines

The code identifying the exposure type or collateral reason in the user header of the message (block 3) must be identical to the code contained in field :22a::COLA//xxxx(Exposure Type Indicator) in sequence A of the message content (text block 4).

A collateral substitution can be sent:

- by the taker to request the substitution of collateral held, the giver will then send a response confirming its agreement or disagreement
- by the giver to propose the substitution of collateral held, the taker will then send a response confirming its agreement or disagreement.

SCTR	Sender's Collateral Transaction Reference	Unique reference identifying the collateral management transaction from the Sender's point of view.
SEME	Sender's Message Reference	Reference assigned by the Sender to unambiguously identify the message.

Network Validated Rules

Reference must not start or end with a slash '/' and must not contain two consecutive slashes '/' (Error code(s): T26).

Usage Rules

For qualifiers SCTR and RCTR:

- If both the Sender's and the Receiver's Collateral Transaction References are available, they both must be included.
- The Collateral Transaction Reference can be a deal reference when the collateral management is done on a per deal basis.

MT 505 - 3. Field 23G: Function of the Message

Format

Option G 4!c[/4!c] (Function) (Subfunction)

Presence

Mandatory (referenced in rule C1) in mandatory sequence A

Definition

This field identifies the function of the message.

Codes

Function must contain one of the following codes (Error code(s): T86):

CANC	Cancellation Request	Message requesting the cancellation of a previously sent message.
NEWM	New	New message.

Codes

Subfunction, when present, must contain one of the following codes (Error code(s): T85):

CODU	Copy Duplicate	Message is a copy to a party other than the account owner/account servicer, for information purposes and the message is a duplicate of a message previously sent.
COPY	Copy	Message is a copy to a party other than the account owner/account servicer, for information purposes.

DUPL Duplicate Message is for information/confirmation purposes. It is a duplicate of a message previously sent.

Usage Rules

To cancel a previously sent substitution, Function is CANC. The reference in the previous reference field must contain the Sender's Reference of the message to be cancelled. A copy of at least the mandatory fields of the message to be cancelled must be present; optional fields need not be present for SWIFT validation.

MT 505 - 4. Field 16R: Start of Block

Format

Option R 16c

Presence

Mandatory in mandatory subsequence A1

Definition

This field specifies the start of a block and the name of that block.

Codes

This field must contain the following code (Error code(s): T92):

AGRE Agreement

MT 505 - 5. Field 22F: Indicator: Agreement Indicator

Format

Option F :4!c/[8c]/4!c (Qualifier) (Data Source Scheme) (Indicator)

Presence

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	AGRE	N		F	Agreement Indicator

Definition

This qualified generic field specifies:

AGRE Agreement Indicator Specifies the underlying master agreement.

Codes

If Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

AFBA AFB Agreement French Banker's Association Agreement.
 BBAA BBA Agreement British Banker's Association Agreement.
 DERV German Rahmenvertrag Agreement German Rahmenvertrag Agreement.
 ISDA ISDA Agreement International Swaps and Derivatives Association Agreement.
 NONR No Reference No information about the master agreement is available.

Usage Rules

For agreements different from the ones listed in the code list for Indicator, field 70C must be used.

MT 505 - 6. Field 98A: Date/Time: Agreement Date

Format

Option A :4!c//8!n (Qualifier) (Date)

Presence

Optional in mandatory subsequence A1

Qualifier

Example 1: OTC Derivatives Trading

See *Standards Category 5 Securities Markets*, MT 503 message 6 of Example 1

MT 506 Collateral and Exposure Statement

Note *The use of this message type requires Message User Group (MUG) registration.*

Important The user header of the message (block 3) is mandatory and must contain a code in the Validation Flag field 119 ({3:{119:xxxx}}) to identify the exposure type or collateral reason. These codes may be used for routing purposes.

MT 506 Scope

This message is sent either by the collateral giver, or its collateral manager, to the collateral taker, or its collateral manager, or by the collateral taker, or its collateral manager to the collateral giver, or its collateral manager.

It is used to provide the details of the valuation of both the collateral or the exposure or both.

This message is also used by the taker or the giver to request the cancellation of a previously sent collateral and exposure statement.

This message must not be used to claim collateral but may be used in support of a claim.

The message may also be used to:

- re-send a message previously sent (Subfunction of the message is DUPL)
- provide a third party with a copy of the message for information (Subfunction of the message is COPY)
- re-send to a third party a copy of the message for information (Subfunction of the message is CODU).

MT 506 Format Specifications

The statement consists of four sequences:

- Sequence A General Information provides general information about the message and the collateral transaction, that is, the function of the message, the identification of the collateral transaction, the references of the linked messages, the identification of the underlying agreement(s), the identification of the parties, the reason for which collateral is needed, the exposure type and the contact information.

Note *More than one occurrence of the agreement is only authorised for cross-product collateralisation and when there is no overall master agreement in place yet.*

- Sequence B Summary provides information related to the collateral position, that is, the identification of the exposed party, the total exposure amount and the total collateral amount held by the taker. It also contains the valuation dates and the requested settlement date of collateral if there is a shortage of collateral. The sequence contains an optional subsequence with the amounts taken in to account to calculate the collateral position. These amounts are required for certain types of exposures.
- Repetitive sequence C Exposure Valuation Details contains the valuation details of the exposure. The identification and the value of the trades and the other elements that constitute the total exposure are included one by one.
- Repetitive sequence D Collateral Valuation Details contains the valuation details of the collateral held by the taker. The identification and the value of each piece of collateral are included one by one.

MT 506 Usage Rules

The exchange of information related to the trade itself as well as to the settlement of the collateral is done with the existing confirmation and settlement messages of the relevant categories (categories 2, 3, 5, 7, 9).

MT 506 Guidelines

A collateral and exposure statement can be sent:

- by the taker to provide the details of the valuation of both the collateral and the exposure
- by the giver to provide the details of the valuation of both the collateral and the exposure.

Industry Requirements

ISDA Definitions

Credit Support Amount

Unless modified by the parties, the Credit Support Amount is generally the amount of Eligible Credit Support that the Secured Party is entitled to hold as of a particular Valuation Date.

The Credit Support Amount is usually defined as:

- the Secured Party's Exposure; **plus**
- the aggregate of all Independent Amounts applicable to the **Pledgor**, if any; **minus**

- the aggregate of all Independent Amounts applicable to the **Secured Party**, if any; **minus**
- the **Pledgor's Unsecured Threshold**.

The Credit Support Amount, however, is deemed to be zero whenever its calculation would yield a number less than zero.

Independent Amount

An Independent Amount is an amount that may be used as an add-on to Exposure which can reflect, among other things, the volatility of a particular Transaction or credit concerns relating to one or both counterparties.

When an Independent Amount is applicable to a party, it increases the Credit Support Amount that is applicable when the other party is the Secured Party and decreases the Credit Support Amount that is applicable when that party is the Secured Party.

However, some parties may wish to modify the Credit Support Amount formula specified above to eliminate the subtraction of Independent Amounts applicable to the Secured Party. In this case, the Independent Amount represents the **minimum** Credit Support Amount when that party is a Credit Support Taker.

For example, Credit Support Amount may be defined as:

- the Secured Party's Exposure; **plus**
- the aggregate of all Independent Amounts applicable to the **Pledgor**, if any, **minus**
- the **Pledgor's Unsecured Threshold**.

Provided that in the case where the sum of the Independent Amounts applicable to the Pledgor exceeds zero, the Credit Support Amount will not be less than the sum of all Independent Amounts applicable to the Pledgor. In all other cases, the Credit Support Amount will be deemed to be zero whenever the calculation of Credit Support Amount yields an amount less than zero.

Hence, in the Collateral Messages, Independent Amounts should default to be treated as nettable unless being explicitly stated as being **non-netted**.

Basic Amount

The Basic Amount with respect to any one party represents the minimum value of Posted Credit Support required at all times from a counterparty independently of any exposure.

Basic Amounts are not subject to any form of netting with Delivery or Return Amounts.

Thresholds

The Threshold generally represents the amount of unsecured risk (measured by the Secured Party's Exposure and the aggregate of any Independent Amounts due, if any) that a party is willing to tolerate without holding any Posted Credit Support provided by the other party.

Generally, under the standard definition of Credit Support Amount, the unsecured threshold is deducted from the current exposure in order to arrive at the Credit Support Amount required for a particular Valuation Date.

Alternatively, given the flexibility provided under ISDA documentation, the parties can agree to vary the Credit Support Amount definition so that when the exposure is greater than the threshold, the Credit Support Amount is calculated without any deduction of the unsecured Threshold, that is, Credit Support Amount = the entire Secured Party's exposure.

Such a threshold arrangement is commonly referred to by the market as a SECURED Threshold since, once breached, the whole exposure is effectively offset by Posted Credit Support.

MT 506 - 2. Field 28E: Page Number/Continuation Indicator

Format

Option E 5n/4!c (Page Number) (Continuation Indicator)

Presence

Mandatory in mandatory sequence A

Definition

This field specifies the page number and an indicator of whether it is the only or last page, or if there are additional pages.

Codes

Continuation Indicator must contain one of the following codes (Error code(s): T97):

LAST	Last Page	Last page of a statement with more than one page.
MORE	Intermediate Page	Intermediate page of a statement which contains additional pages.
ONLY	Only Page	Only page of the statement.

Definition

This qualified generic field specifies:

AEXP	Adjusted Exposure Amount	Total amount of collateral required (unrounded).
CORE	Collateral Required Amount	Total amount of collateral required (rounded).
MITR	Minimum Transfer Amount	Minimum additional collateral amount required above the collateral held.
NRAD	Netted Independent Amount	Non recoverable add-on amount to the exposure.
PEVA	Previous Market Price Value	Exposure Value at Previous Valuation.
PRCV	Previous Collateral Value	Value of Collateral at Previous Valuation.
PRHA	Pre-haircut Collateral Value	Total value of posted collateral (pre-haircut) held by the taker.
RADD	Basic Amount	Recoverable add-on amount to the exposure.
ROUN	Rounding Integer Amount	Amount to which the value of the collateral collected may be rounded up.
TACR	Total Accrued Interest Amount	Sum of accrued interest.
TCHA	Total Fees/Commissions	Sum of fees/commissions.

THRS	Secured Threshold Amount	Amount of secured risk the exposed party is willing to tolerate. If the exposure is bigger than this amount, the whole exposure needs to be offset otherwise no collateral is needed.
THRU	Unsecured Threshold Amount	Amount for which the exposed party doesn't have to post collateral. The difference between the total exposure amount and this amount needs to be collateralised.
TPIN	Total Pending Collateral In	Value of incoming collateral, to be settled.
TPOU	Total Pending Collateral Out	Value of outgoing collateral, to be settled.

Network Validated Rules

The integer part of Amount must contain at least one digit. The decimal comma is mandatory and is included in the maximum length. The number of digits following the comma must not exceed the maximum allowed for the specified currency (Error code(s): C03, T40, T43).

Currency Code must be a valid ISO 4217 currency code (Error code(s): T52).

Qualifier

(Error code(s): T89)

A001	30/360 (ISDA) or 30/360 (American Basic Rule)	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February, and provided that the interest period started on a 30th or a 31st. This means that a 31st is assumed to be a 30th if the period started on a 30th or a 31st and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). It is the most commonly used 30/360 method for US straight and convertible bonds.
A002	30/365	Method whereby interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and a 365-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th).
A003	30/Actual	Method whereby interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and the assumed number of days in a year in a way similar to the Actual/Actual (ICMA). Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). The assumed number of days in a year is computed as the actual number of days in the coupon period multiplied by the number of interest payments in the year.
A004	Actual/360	Method whereby interest is calculated based on the actual number of accrued days in the interest period and a 360-day year.
A005	Actual/365 (Fixed)	Method whereby interest is calculated based on the actual number of accrued days in the interest period and a 365-day year.
A006	Actual/Actual (ICMA)	Method whereby interest is calculated based on the actual number of accrued days and the assumed number of days in a year, that is, the actual number of days in the coupon period multiplied by the number of interest payments in the year. If the coupon period is irregular (first or last coupon), it is extended or split into quasi interest periods that have the length of a regular coupon period and the computation is operated separately on each quasi interest period and the intermediate results are summed up.
A007	30E/360 or Eurobond basis	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be equivalent to a 30 Feb. However, if the last day of the maturity coupon period is the last day of February, it will not be assumed to be a 30th. It is a variation of the 30/360 (ICMA) method commonly used for eurobonds. The usage of this variation is only relevant when the coupon periods are scheduled to end on the last day of the month.
A008	Actual/Actual (ISDA)	Method whereby interest is calculated based on the actual number of accrued days of the interest period that fall on a normal year, divided by 365, added to the actual number of days of the interest period that fall on a leap year, divided by 366.

A009	Actual/365L or Actual/Actual (basic rule)	Method whereby interest is calculated based on the actual number of accrued days and a 365-day year (if the coupon payment date is NOT in a leap year) or a 366-day year (if the coupon payment date is in a leap year).
A010	Actual/Actual (AFB)	Method whereby interest is calculated based on the actual number of accrued days and a 366-day year (if 29 Feb falls in the coupon period) or a 365-day year (if 29 Feb does not fall in the coupon period). If a coupon period is longer than one year, it is split by repetitively separating full year sub-periods counting backwards from the end of the coupon period (a year backwards from a 28 Feb being 29 Feb, if it exists). The first of the sub-periods starts on the start date of the accrued interest period and thus is possibly shorter than a year. Then the interest computation is operated separately on each sub-period and the intermediate results are summed up.
A011	30/360 (ICMA) or 30/360 (basic rule)	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). It is the most commonly used 30/360 method for non-US straight and convertible bonds issued before 01/01/1999.
A012	30E2/360 or Eurobond basis model 2	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for the last day of February whose day of the month value shall be adapted to the value of the first day of the interest period if the latter is higher and if the period is one of a regular schedule. This means that a 31st is assumed to be a 30th and the 28th Feb of a non-leap year is assumed to be equivalent to a 29th Feb when the first day of the interest period is a 29th, or to a 30th Feb when the first day of the interest period is a 30th or a 31st. The 29th Feb of a leap year is assumed to be equivalent to a 30th Feb when the first day of the interest period is a 30th or a 31st. Similarly, if the coupon period starts on the last day of February, it is assumed to produce only one day of interest in February as if it was starting on a 30th Feb when the end of the period is a 30th or a 31st, or two days of interest in February when the end of the period is a 29th, or 3 days of interest in February when it is the 28th Feb of a non-leap year and the end of the period is before the 29th.
A013	30E3/360 or Eurobond basis model 3	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be equivalent to a 30 Feb. It is a variation of the 30E/360 (or Eurobond basis) method where the last day of February is always assumed to be a 30th, even if it is the last day of the maturity coupon period.
A014	Actual/365NL or Actual/365 No Leap	Method whereby interest is calculated based on the actual number of accrued days in the interest period, excluding any leap day from the count, and a 365-day year.
OTHR	Other	Other method than A001-A014. See Narrative.

MT 506 - 36. Field 92a: Rate

Format

Option A	:4!c//[N]15d	(Qualifier) (Sign) (Rate)
Option B	:4!c//3!a/3!a/15d	(Qualifier) (First Currency Code) (Second Currency Code) (Rate)

Presence

Mandatory in optional sequence C

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	M	EXCH	N		B	Exchange Rate
2	M	MARG	N		A	Margin
3	M	CHAI	N		A	Currency Haircut

Definition

This qualified generic field specifies:

CHAI	Currency Haircut	Haircut or valuation factor on the currency of the collateral expressed as a percentage.
EXCH	Exchange Rate	Exchange rate between the currency of the collateral and the reporting currency.
MARG	Margin	Percentage by which the collateral amount needs to be adjusted.

Network Validated Rules

The integer part of Rate must contain at least one digit. The decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).

First Currency Code and Second Currency Code must be valid ISO 4217 currency codes (Error code(s): T52).

Sign must not be used when Rate is equal to zero (Error code(s): T14).

Usage Rules

Except if notified differently in the rate definition, when used with format option A (:4!c//[N]15d), the rate must be expressed as a percentage, not as a decimal fraction (12% must be identified by 12, and not 0,12).

The order of the two currencies specified, when format B is used, is independent of the currencies in the collateral and reporting amount fields. Therefore the exchange rate can be expressed as a reciprocal if required.

For the calculation of the rate itself, the First Currency Code will be the base currency and the Second Currency Code will be the quoted currency (1,00 of First Currency Code = [Rate] of Second Currency Code).

Example

The exchange rate between US Dollars and Pounds Sterling can be shown as:

:92B::EXCH//GBP/USD/1,619 (1,00 GBP = 1,619 USD)

or as:

:92B::EXCH//USD/GBP/0,618 (1,00 USD = 0,618 GBP)

Definition

This qualified generic field specifies:

EXPO Exposure Narrative Provides additional information regarding the transaction which could not be reported in any other field, for example, the sub-product type or underlying issuer.

Usage Rules

Unless bilaterally agreed between the Sender and the Receiver, narrative field 70a must not contain information that can be provided in a structured field.

MT 506 - 38. Field 16R: Start of Block

Format

Option R 16c

Presence

Mandatory in optional subsequence C1

Definition

This field identifies the financial instrument valued.

Network Validated Rules

At least Identification of a Security (Subfield 1) or Description of Security (Subfield 2) must be present; both may be present (Error code(s): T17).

ISIN is used at the beginning of Identification of Security (Subfield 1) and must be composed of uppercase letters only (Error code(s): T12).

Usage Rules

When used in Description of Security (Subfield 2), codes must start and end with a slash '/'.

When an ISIN identifier is not used it is strongly recommended that one of the following codes be used as the first characters of the Description of Security (Subfield 2):

- [/2!a/] The ISO two-digit country code, followed by the national scheme number.
- [/TS/] Followed by the ticker symbol.
- [/XX/] Bilaterally agreed or proprietary scheme which may be further identified by a code or short description identifying the scheme used.
- [/4!c/] Code identifying the type of security identifier used. This code must be one published by ISO 20022 (ExternalFinancialInstrumentIdentificationTypeCode).

It is strongly recommended that an ISIN be used.

------	--	---

Codes

If Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

A001	30/360 (ISDA) or 30/360 (American Basic Rule)	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February, and provided that the interest period started on a 30th or a 31st. This means that a 31st is assumed to be a 30th if the period started on a 30th or a 31st and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). It is the most commonly used 30/360 method for US straight and convertible bonds.
A002	30/365	Method whereby interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and a 365-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th).
A003	30/Actual	Method whereby interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and the assumed number of days in a year in a way similar to the Actual/Actual (ICMA). Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). The assumed number of days in a year is computed as the actual number of days in the coupon period multiplied by the number of interest payments in the year.
A004	Actual/360	Method whereby interest is calculated based on the actual number of accrued days in the interest period and a 360-day year.
A005	Actual/365 (Fixed)	Method whereby interest is calculated based on the actual number of accrued days in the interest period and a 365-day year.
A006	Actual/Actual (ICMA)	Method whereby interest is calculated based on the actual number of accrued days and the assumed number of days in a year, that is, the actual number of days in the coupon period multiplied by the number of interest payments in the year. If the coupon period is irregular (first or last coupon), it is extended or split into quasi interest periods that have the length of a regular coupon period and the computation is operated separately on each quasi interest period and the intermediate results are summed up.

A007	30E/360 or Eurobond basis	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be equivalent to a 30 Feb. However, if the last day of the maturity coupon period is the last day of February, it will not be assumed to be a 30th. It is a variation of the 30/360 (ICMA) method commonly used for eurobonds. The usage of this variation is only relevant when the coupon periods are scheduled to end on the last day of the month.
A008	Actual/Actual (ISDA)	Method whereby interest is calculated based on the actual number of accrued days of the interest period that fall on a normal year, divided by 365, added to the actual number of days of the interest period that fall on a leap year, divided by 366.
A009	Actual/365L or Actual/Actual (basic rule)	Method whereby interest is calculated based on the actual number of accrued days and a 365-day year (if the coupon payment date is NOT in a leap year) or a 366-day year (if the coupon payment date is in a leap year).
A010	Actual/Actual (AFB)	Method whereby interest is calculated based on the actual number of accrued days and a 366-day year (if 29 Feb falls in the coupon period) or a 365-day year (if 29 Feb does not fall in the coupon period). If a coupon period is longer than one year, it is split by repetitively separating full year sub-periods counting backwards from the end of the coupon period (a year backwards from a 28 Feb being 29 Feb, if it exists). The first of the sub-periods starts on the start date of the accrued interest period and thus is possibly shorter than a year. Then the interest computation is operated separately on each sub-period and the intermediate results are summed up.
A011	30/360 (ICMA) or 30/360 (basic rule)	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). It is the most commonly used 30/360 method for non-US straight and convertible bonds issued before 01/01/1999.
A012	30E2/360 or Eurobond basis model 2	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for the last day of February whose day of the month value shall be adapted to the value of the first day of the interest period if the latter is higher and if the period is one of a regular schedule. This means that a 31st is assumed to be a 30th and the 28th Feb of a non-leap year is assumed to be equivalent to a 29th Feb when the first day of the interest period is a 29th, or to a 30th Feb when the first day of the interest period is a 30th or a 31st. The 29th Feb of a leap year is assumed to be equivalent to a 30th Feb when the first day of the interest period is a 30th or a 31st. Similarly, if the coupon period starts on the last day of February, it is assumed to produce only one day of interest in February as if it was starting on a 30th Feb when the end of the period is a 30th or a 31st, or two days of interest in February when the end of the period is a 29th, or 3 days of interest in February when it is the 28th Feb of a non-leap year and the end of the period is before the 29th.

A013	30E3/360 or Eurobond basis model 3	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be equivalent to a 30 Feb. It is a variation of the 30E/360 (or Eurobond basis) method where the last day of February is always assumed to be a 30th, even if it is the last day of the maturity coupon period.
A014	Actual/365NL or Actual/365 No Leap	Method whereby interest is calculated based on the actual number of accrued days in the interest period, excluding any leap day from the count, and a 365-day year.
OTHR	Other	Other method than A001-A014. See Narrative.

MT 506 - 64. Field 92a: Rate

Format

Option A	:4!c//[N]15d	(Qualifier) (Sign) (Rate)
Option B	:4!c//3!a/3!a/15d	(Qualifier) (First Currency Code) (Second Currency Code) (Rate)

Presence

Mandatory in conditional (see rule C11) sequence D

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	M	EXCH	N		B	Exchange Rate
2	M	MARG	N		A	Margin
3	M	CHAI	N		A	Currency Haircut

Definition

This qualified generic field specifies:

CHAI	Currency Haircut	Haircut or valuation factor on the currency of the collateral expressed as a percentage.
EXCH	Exchange Rate	Exchange rate between the currency of the collateral and the reporting currency.
MARG	Margin	Percentage by which the collateral amount needs to be adjusted.

Presence

Mandatory in conditional (see rule C4) subsequence D1

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	M	MRKT	N		B	Market Price Amount

Definition

This qualified generic field specifies:

MRKT Market Price Market Price of the valued financial instrument.
 Amount

Network Validated Rules

The integer part of Amount must contain at least one digit. The decimal comma is mandatory and is included in the maximum length. The number of digits following the comma must not exceed the maximum allowed for the specified currency (Error code(s): C03, T40, T43).

Currency Code must be a valid ISO 4217 currency code (Error code(s): T52).

MT 506 - 67. Field 35B: Identification of the Financial Instrument

Format

Option B [ISIN!e12!c] (Identification of Security)
 [4*35x] (Description of Security)

Presence

Mandatory in conditional (see rule C4) subsequence D1

Definition

This field identifies the financial instrument.

Network Validated Rules

At least Identification of a Security (Subfield 1) or Description of Security (Subfield 2) must be present; both may be present (Error code(s): T17).

ISIN is used at the beginning of Identification of Security (Subfield 1) and must be composed of uppercase letters only (Error code(s): T12).

Usage Rules

When used in Description of Security (Subfield 2), codes must start and end with a slash '/'.

When an ISIN identifier is not used it is strongly recommended that one of the following codes be used as the first characters of the Description of Security (Subfield 2):

[/2!a/] The ISO two-digit country code, followed by the national scheme number.

- [/TS/] Followed by the ticker symbol.
- [/XX/] Bilaterally agreed or proprietary scheme which may be further identified by a code or short description identifying the scheme used.
- [/4!c/] Code identifying the type of security identifier used. This code must be one published by ISO 20022 (ExternalFinancialInstrumentIdentificationTypeCode).

It is strongly recommended that an ISIN be used.

MT 506 - 68. Field 36a: Quantity of Financial Instrument: Quantity of Securities Collateral

Format

- Option B :4!c//4!c/15d (Qualifier) (Quantity Type Code)
(Quantity)
- Option D :4!c//4!c/30d (Qualifier) (Quantity Type Code)
(Quantity of Digital Tokens)

Presence

Mandatory in conditional (see rule C4) subsequence D1

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	M	COLL	N		B or D	Quantity of Securities Collateral

Definition

This qualified generic field specifies:

- COLL Quantity of Securities Collateral Quantity of financial instrument used as collateral.

Codes

In option B, Quantity Type Code must contain one of the following codes (Error code(s): K36):

- AMOR Amortised Value Quantity expressed as an amount representing the current amortised face amount of a bond, for example, a periodic reduction/increase of a bond's principal amount.
- FAMT Face Amount Quantity expressed as an amount representing the face amount, that is, the principal, of a debt instrument.
- UNIT Unit Number Quantity expressed as a number, for example, a number of shares.

Codes

In option D, Quantity Type Code must contain the following code (Error code(s): K36):

DITU	Digital Token Unit Number	Quantity of digital token expressed as a number, for example, a number of blockchain tokens.
------	---------------------------	--

Network Validated Rules

The integer part of Quantity must contain at least one digit. The decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).

MT 506 - 69. Field 92A: Rate: Securities Haircut

Format

Option A :4!c//[N]15d (Qualifier) (Sign) (Rate)

Presence

Mandatory in conditional (see rule C4) subsequence D1

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	M	SHAI	N		A	Securities Haircut

Definition

This qualified generic field specifies:

SHAI Securities Haircut Haircut or valuation factor on the security expressed as a percentage.

Network Validated Rules

The integer part of Rate must contain at least one digit. The decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).

If Rate is zero, Sign must not be present (Error code(s): T14).

Usage Rules

Except if notified differently in the rate definition, when used with format option A (:4!c//[N]15d), the rate must be expressed as a percentage, not as a decimal fraction (12% must be identified by 12, and not 0,12).

MT 506 - 70. Field 98A: Date/Time: Expiry Date

Format

Option A :4!c//8!n (Qualifier) (Date)

Presence

Optional in conditional (see rule C4) subsequence D1

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	EXPI	N		A	Expiry Date

Definition

This qualified generic field specifies:

EXPI Expiry Date Date on which an order expires or on which a privilege or offer terminates.

Network Validated Rules

Date must be a valid date expressed as YYYYMMDD (Error code(s): T50).

MT 506 - 71. Field 94B: Place

Format

Option B :4!c/[8c]/4!c[/30x] (Qualifier) (Data Source Scheme) (Place Code) (Narrative)

Presence

Optional in conditional (see rule C4) subsequence D1

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	PRIC	N		B	Source of Price
2	O	RATS	N	C10	B	Source of Rating

Definition

This qualified generic field specifies:

PRIC Source of Price Source of the valuation price.
 RATS Source of Rating Rating source of the financial instrument.

Codes

If Data Source Scheme is not present, Place Code must contain one of the following codes (Error code(s): K94):

FUND	Fund	Source is a fund (transfer agent, fund itself, etc.).
LMAR	Local Market	Source is the market.
THEO	Theoretical	Source is a theoretical value based on the market yield.
VEND	Vendor Source	Source is an external vendor.

Network Validated Rules

Narrative must not start or end with a slash '/' and must not contain two consecutive slashes '/' (Error code(s): T26).

Usage Rules

The identification of the source is done in the narrative.

MT 506 - 72. Field 70C: Narrative: Rating Narrative

Format

Option C :4!c//4*35x (Qualifier) (Narrative)

Presence

Conditional (see rule C10) in conditional (see rule C4) subsequence D1

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	RATS	N	C10	C	Rating Narrative

Definition

This qualified generic field specifies:

RATS Rating Narrative Provides the rating of the financial instrument.

Usage Rules

Unless bilaterally agreed between the Sender and the Receiver, narrative field 70a must not contain information that can be provided in a structured field.

Example

Example of rating:

:70C: :RATS//AA+

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	M	DEPO	N		B	Deposit Amount

Definition

This qualified generic field specifies:

DEPO Deposit Amount Amount of money deposited after valuation.

Network Validated Rules

The integer part of Amount must contain at least one digit. The decimal comma is mandatory and is included in the maximum length. The number of digits following the comma must not exceed the maximum allowed for the specified currency (Error code(s): C03, T40, T43).

Currency Code must be a valid ISO 4217 currency code (Error code(s): T52).

MT 506 - 76. Field 22H: Indicator: Type of Deposit Indicator

Format

Option H :4!c//4!c (Qualifier) (Indicator)

Presence

Mandatory in conditional (see rule C4) subsequence D2

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	M	DEPO	N	C5	H	Type of Deposit Indicator

Definition

This qualified generic field specifies:

DEPO Type of Deposit Indicator Specifies whether the deposit is fixed term or call/notice.

Codes

Indicator must contain one of the following codes (Error code(s): K22):

CLNT Call/Notice Call/notice deposit.

FIXT Fixed Term Fixed term deposit.

MT 506 - 77. Field 98A: Date/Time: Maturity Date

Format

Option A :4!c//8!n (Qualifier) (Date)

Presence

Optional in conditional (see rule C4) subsequence D2

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	TERM	N	C5	A	Maturity Date

Definition

This qualified generic field specifies:

TERM Maturity Date Closing date or maturity date of the fixed term deposit.

Network Validated Rules

Date must be a valid date expressed as YYYYMMDD (Error code(s): T50).

MT 506 - 78. Field 16S: End of Block

Format

Option S 16c

Presence

Mandatory in conditional (see rule C4) subsequence D2

Definition

This field specifies the end of a block and the name of that block.

Codes

This field must contain the following code (Error code(s): T92):

CCOL Cash Collateral Details

MT 506 - 79. Field 16R: Start of Block

Format

Option R 16c

Option B :4!c/[8c]/4!c (Qualifier) (Data Source Scheme) (Date Code)

Presence

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	M	ISSU	N		A	Issue Date
2	O	EXPI	N	C6	A or B	Expiry Date

Definition

This qualified generic field specifies:

EXPI	Expiry Date	Expiry date of the bank guarantee or documentary credit.
ISSU	Issue Date	Date on which the bank guarantee or documentary credit is issued.

Codes

In option B, if Qualifier is EXPI and Data Source Scheme is not present, Date Code must contain the following code (Error code(s): K98):

OPEN	Open-Dated	There is no expiry date.
------	------------	--------------------------

Network Validated Rules

Date must be a valid date expressed as YYYYMMDD (Error code(s): T50).

MT 506 - 82. Field 95a: Party: Issuer

Format

Option P	:4!c//4!a2!a2!c[3!c]	(Qualifier) (Identifier Code)
Option Q	:4!c//4*35x	(Qualifier) (Name and Address)
Option R	:4!c/8c/34x	(Qualifier) (Data Source Scheme) (Proprietary Code)

Presence

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	M	ISSU	N		P, Q, or R	Issuer

Definition

This qualified generic field specifies:

ISSU Issuer Party that issues the bank guarantee or documentary credit.

Network Validated Rules

Identifier Code must be a registered BIC (Error code(s): T27, T28, T29, T45).

Proprietary code (Format Option R) and Name and Address (Format Option Q) must not start or end with a slash '/' and must not contain two consecutive slashes '//'. For field formats with more than 1 line, the rule applies for each line (Error code(s): T26).

Usage Rules

In option R, Proprietary Code specifies a local national code or market segment code identifying the party.

MT 506 - 83. Field 19B: Amount

Format

Option B :4!c//3!a15d (Qualifier) (Currency Code) (Amount)

Presence

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	M	GUAR	N		B	Guarantee Amount
	or	LOCR	N		B	Letter of Credit Amount

Definition

This qualified generic field specifies:

GUAR Guarantee Amount Amount of the bank guarantee after valuation.
 LOCR Letter of Credit Amount of the documentary credit after valuation.
 Amount

Network Validated Rules

The integer part of Amount must contain at least one digit. The decimal comma is mandatory and is included in the maximum length. The number of digits following the comma must not exceed the maximum allowed for the specified currency (Error code(s): C03, T40, T43).

Currency Code must be a valid ISO 4217 currency code (Error code(s): T52).

MT 506 - 84. Field 16S: End of Block

Format

Option S 16c

Presence

Mandatory in conditional (see rule C4) subsequence D3

Definition

This field specifies the end of a block and the name of that block.

Codes

This field must contain the following code (Error code(s): T92):

BCOL Other Collateral Details

MT 506 - 85. Field 16S: End of Block

Format

Option S 16c

Presence

Mandatory in conditional (see rule C11) sequence D

Definition

This field specifies the end of a block and the name of that block.

Codes

This field must contain the following code (Error code(s): T92):

COLD Collateral Details

MT 506 - 86. Field 16R: Start of Block

Format

Option R 16c

Proprietary code (Format Option R) and Name and Address (Format Option Q) must not start or end with a slash '/' and must not contain two consecutive slashes '//'. For field formats with more than 1 line, the rule applies for each line (Error code(s): T26).

Usage Rules

In option R, Proprietary Code specifies a local national code or market segment code identifying the party.

MT 506 - 88. Field 19A: Amount

Format

Option A :4!c//[N]3!a15d (Qualifier) (Sign) (Currency Code)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	TEXP	N		A	Total Exposure Value of Page
2	O	TCOP	N		A	Total Collateral Held Value of Page

Definition

This qualified generic field specifies:

TCOP	Total Collateral Held Value of Page	Total value of collateral held reported in this message.
TEXP	Total Exposure Value of Page	Total value of exposure reported in this message.

Network Validated Rules

The integer part of Amount must contain at least one digit. A decimal comma is mandatory and is included in the maximum length. The number of digits following the comma must not exceed the maximum allowed for the specified currency (Error code(s): C03, T40, T43).

Currency Code must be a valid ISO 4217 currency code (Error code(s): T52).

If Amount is zero, Sign must not be present (Error code(s): T14).

Usage Rules

Sign must be present when Amount is negative.

MT 507 Collateral Status and Processing Advice

Note *The use of this message type requires Message User Group (MUG) registration.*

Important The user header of the message (block 3) is mandatory and must contain a code in the Validation Flag field 119 ({3:{119:xxxx}}) to identify the exposure type or collateral reason. These codes may be used for routing purposes.

MT 507 Scope

This message is sent by the Receiver of a collateral claim, a collateral proposal or a proposal/request for collateral substitution.

It is used to advise the status of the received message.

It may also be used to:

- reject a collateral claim, collateral proposal or the proposal/request of a collateral substitution
- accept a collateral claim, collateral proposal or the proposal/request of a collateral substitution
- advise the settlement details of proposed collateral
- reply to a cancellation request previously sent by the Receiver
- re-send a message previously sent (Subfunction of the message is DUPL)
- provide a third party with a copy of the message for information (Subfunction of the message is COPY)
- re-send to a third party a copy of the message for information (Subfunction of the message is CODU)

MT 507 Format Specifications

The status and processing advice consists of two sequences:

- Sequence A General Information provides general information about the message the status and processing advice refers to, that is, the function of the message, the identification of the collateral transaction, the references of the linked messages, the identification of the underlying agreement(s), the identification of the parties, the reason for which collateral is needed (the exposure type), the contact information and the status and reason information.

Note *More than one occurrence of the agreement is only authorised for cross-product collateralisation and when there is no overall master agreement in place yet.*

- Sequence B Collateral Details provides status and reason information related to specific pieces of collateral and contains further settlement details for the accepted collateral pieces of securities or cash collateral.

C3 In each occurrence of sequence B, the presence of subsequence B1 depends on the value of field :25D::COLL//<Status> and :22H::COLL//<Indicator> as follows (Error code(s): C70):

In each occurrence of sequence B			
If for field :25D::COLL/[8c]/4!c Data Source Scheme [8c] is ...	And field :25D::COLL/ [8c]/4!c is ...	And field : 22H::COLL//4!c is ...	Then subsequence B1 is ...

(1) see rule C11 (Error code(s): C69) for additional checks.

C4 In each occurrence of sequence B, for subsequences B1a1 and B1b1, the following party fields cannot appear more than once (Error code(s): E84):

Subsequence B1a1	Subsequence B1b1
:95a::BUYR	:95a::ACCW
:95a::DEAG	:95a::BENM
:95a::DECU	:95a::PAYE

:95a::PSET	
:95a::REAG	
:95a::RECU	
:95a::REI1	
:95a::REI2	
:95a::SELL	

C5 It is mandatory to specify a Receiving Agent for the Securities Settlement Parties (subsequences B1a1):

In each occurrence of sequence B (if present), if subsequence B1a1 Securities Settlement Parties is present, then field :95a::REAG must be present in one and only one occurrence of subsequence B1a1 in the same occurrence of sequence B (Error code(s): E93).

Note See also Network Validated Rule C4 (Error code(s): E84).

C6 In each occurrence of sequence B, if a qualifier from the list Deliverers is present in one occurrence of subsequence B1a1 in a field :95a::4!c, then all the remaining qualifiers following this qualifier in the list Deliverers (see below) must be present in other subsequences B1a1 of the same occurrence of sequence B (Error code(s): E86).

In other words, in each occurrence of sequence B, the following scenarios must be validated:

- If :95a::DEI2 is present in subsequence B1a1, then :95a::DEI1 must be present in another subsequence B1a1.
- If :95a::DEI1 is present in subsequence B1a1, then :95a::DECU must be present in another subsequence B1a1.
- If :95a::DECU is present in subsequence B1a1, then :95a::SELL must be present in another subsequence B1a1.

In each occurrence of sequence B, if a qualifier from the list Receivers is present in one occurrence of subsequence B1a1 in a field :95a::4!c, then all the remaining qualifiers following this qualifier in the list Receivers (see below) must be present in other subsequences B1a1 of the same occurrence of sequence B (Error code(s): E86).

In other words, in each occurrence of sequence B, the following scenarios must be validated:

- If :95a::REI2 is present in subsequence B1a1, then :95a::REI1 must be present in another subsequence B1a1.
- If :95a::REI1 is present in subsequence B1a1, then :95a::RECU must be present in another subsequence B1a1.
- If :95a::RECU is present in subsequence B1a1, then :95a::BUYR must be present in another subsequence B1a1.

Deliverers		Receivers	
DEI2	Deliverer's Intermediary 2	REI2	Receiver's Intermediary 2

Deliverers		Receivers	
DEI1	Deliverer's Intermediary 1	REI1	Receiver's Intermediary 1
DECU	Deliverer's Custodian	RECU	Receiver's Custodian
SELL	Seller (Deliverer)	BUYR	Buyer (Receiver)

C7 In each occurrence of subsequence B1a, the presence of the subsequence B1a1 depends on the presence of field :22F::STCO//NSSP as follows (Error code(s): E48):

In each occurrence of subsequence B1a if field :22F::STCO//NSSP is ... ⁽¹⁾	In the same occurrence of subsequence B1a then subsequence B1a1 is ...
Not present	Optional
Present	Mandatory

(1) if the Data Source Scheme is present in field :22F::STCO//NSSP then the conditional rule does not apply.

C8 In each occurrence of subsequence B1b, the presence of the subsequence B1b1 depends on the presence of field :22F::STCO//NSSP as follows (Error code(s): E49):

In each occurrence of subsequence B1b if field :22F::STCO//NSSP is ... ⁽¹⁾	In the same occurrence of subsequence B1b then subsequence B1b1 is ...
Not present	Optional
Present	Mandatory

(1) if the Data Source Scheme is present in field :22F::STCO//NSSP then the conditional rule does not apply.

C9 In each occurrence of subsequence A1, if field :22F::AGRE is not present, then field :70C::AGRE is mandatory, otherwise field :70C::AGRE is optional (Error code(s): E71).

In each occurrence of subsequence A1 if field :22F::AGRE is ...	In the same occurrence of subsequence A1 then field :70C::AGRE is ...
Not present	Mandatory
Present	Optional

C10 The user header of the message (block 3) is mandatory and must contain a valid code in the Validation Flag field 119 ({3:{119:xxxx}}). This code must be identical to the code contained in field :22a::COLA//xxxx (Exposure Type Indicator) in sequence A of the message content (text block 4) (Error code(s): C94).

C11 In each occurrence of sequence B (if present), if subsequence B1 is present, the presence of subsequences B1a and B1b depends on the value of field :22H::COLL//<Indicator> in sequence B as follows (Error code(s): C69):

In each occurrence of sequence B			
If subsequence B1 is ...	Sequence B and field : 22H::COLL/4!c is ...	Then subsequence B1a is ...	And subsequence B1b is ...
Present	CCOL	Not allowed	Mandatory
	SCOL	Mandatory	Not allowed
	BCOL Not applicable see rule C3 (Error code(s): C70).	Not applicable	Not applicable
Not present	Not applicable	Not applicable	Not applicable

C12 Field :13a::LINK must be present in one and only one occurrence of subsequence A2 (Error code(s): D52).

Note See also Network Validated Rule C13 (Error code(s): D53).

C13 Field:20C::RELA must be present in the same occurrence of subsequence A2 where field : 13a::LINK is present (Error code(s): D53).

Note See also Network Validated Rule C12 (Error code(s): D52).

MT 507 Usage Rules

The exchange of information related to the trade itself as well as to the settlement of the collateral is done with the existing confirmation and settlement messages of the relevant categories (categories 2, 3, 5, 7, 9).

MT 507 Guidelines

The code identifying the exposure type or collateral reason in the user header of the message (block 3) must be identical to the code contained in field :22a::COLA//xxxx (Exposure Type Indicator) in sequence A of the message content (text block 4).

A collateral status and processing advice can be sent:

- At initiation time:
 - When the initiative is taken by the taker, a collateral claim is sent asking the giver to post collateral. The claim provides the exposure amount and the value of collateral required. The taker can also include the details of the collateral he wants.

If the giver doesn't know which collateral he will post when he receives the claim, he sends then a response stating that he agrees with the claim and will propose collateral later.

If the giver does not agree with the claim and sends a response message to the taker stating the reason for not agreeing

- When the initiative is taken by the giver, a collateral proposal is sent to the taker containing the details of the proposed collateral together with the exposure amount and the value of collateral required.

The taker agrees by sending a response message to the giver and awaits the settlement of the collateral.

Or the taker does not agree and sends a message stating the reason for not agreeing.
- When a new exposure is created by a variation in the value of the exposure, in the value of the collateral or in both values, the parties can do a valuation calculation and send a collateral and exposure statement.
 - The taker will send a claim for additional collateral to be posted by the giver, when the exposure from the taker vis-à-vis the giver increases.

If the giver doesn't know which collateral he will post when he receives the claim, he sends a response stating that he agrees with the claim and propose collateral later.

If the giver does not agree with the claim, he sends a response message to the taker stating the reason for not agreeing.
 - The giver will send a collateral claim containing the details of the collateral to be returned, when the exposure from the taker vis-à-vis the giver decreases, The taker agrees by sending a response message to the giver and awaits the settlement of the collateral. Or the taker does not agree and sends a message stating the reason for not agreeing.
- When termination occurs, the exposure between the parties has disappeared completely. This happens for instance when a trade has reached maturity or when parties have decided to stop trading altogether or when an institution pulls out of a clearing system. The giver will send a message claiming all posted collateral. The taker will send a response confirming his agreement or disagreement.
- A response can be sent to a collateral substitution proposal to the receiver confirming the agreement or the disagreement of the sender of the response to the substitution proposal.

MT 507 Field Specifications

MT 507 - 1. Field 16R: Start of Block

Format

Option R 16c

Presence

Mandatory in mandatory sequence A

Definition

This field specifies the start of a block and the name of that block.

Codes

This field must contain the following code (Error code(s): T92):

GENL General Information

MT 507 - 2. Field 20C: Reference

Format

Option C :4!c//16x (Qualifier) (Reference)

Presence

Mandatory in mandatory sequence A

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	M	SEME	N		C	Sender's Message Reference
2	O	SCTR	N	C1	C	Sender's Collateral Transaction Reference
3	O	RCTR	N	C1	C	Receiver's Collateral Transaction Reference

Definition

This qualified generic field specifies:

RCTR	Receiver's Collateral Transaction Reference	Unique reference identifying the collateral management transaction from the Receiver's point of view.
SCTR	Sender's Collateral Transaction Reference	Unique reference identifying the collateral management transaction from the Sender's point of view.
SEME	Sender's Message Reference	Reference assigned by the Sender to unambiguously identify the message.

Network Validated Rules

Reference must not start or end with a slash '/' and must not contain two consecutive slashes '/' (Error code(s): T26).

Usage Rules

For qualifiers SCTR and RCTR:

- If both the Sender's and the Receiver's Collateral Transaction References are available, they both must be included.
- The Collateral Transaction Reference can be a deal reference when the collateral management is done on a per deal basis.

MT 507 - 3. Field 23G: Function of the Message

Format

Option G 4!c[/4!c] (Function) (Subfunction)

Presence

Mandatory in mandatory sequence A

Definition

This field identifies the function of the message.

Codes

Function must contain one of the following codes (Error code(s): T86):

CAST	Cancellation Request Status	Message reporting on a cancellation request status.
INST	Instruction Transaction Status	Message reporting on an instruction status.

Codes

Subfunction, when present, must contain one of the following codes (Error code(s): T85):

CODU	Copy Duplicate	Message is a copy to a party other than the account owner/account servicer, for information purposes and the message is a duplicate of a message previously sent.
COPY	Copy	Message is a copy to a party other than the account owner/account servicer, for information purposes.
DUPL	Duplicate	Message is for information/confirmation purposes. It is a duplicate of a message previously sent.

MT 507 - 4. Field 16R: Start of Block

Format

Option R 16c

Presence

Mandatory in mandatory subsequence A1

Definition

This field specifies the start of a block and the name of that block.

Codes

This field must contain the following code (Error code(s): T92):

AGRE Agreement

MT 507 - 5. Field 22F: Indicator: Agreement Indicator

Format

Option F :4!c/[8c]/4!c (Qualifier) (Data Source Scheme)

Presence

Optional in mandatory subsequence A1

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	AGRE	N	C9	F	Agreement Indicator

Definition

This qualified generic field specifies:

AGRE Agreement Indicator Specifies the underlying master agreement.

Codes

If Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

AFBA	AFB Agreement	French Banker's Association Agreement.
BBAA	BBA Agreement	British Banker's Association Agreement.
DERV	German Rahmenvertrag Agreement	German Rahmenvertrag Agreement.
ISDA	ISDA Agreement	International Swaps and Derivatives Association Agreement.
NONR	No Reference	No information about the master agreement is available.

Usage Rules

For agreements different from the ones listed in the code list for Indicator, field 70C must be used.

MT 507 - 6. Field 98A: Date/Time: Agreement Date

Format

Option A :4!c//8!n (Qualifier) (Date)

Presence

Optional in mandatory subsequence A1

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	AGRE	N		A	Agreement Date

Definition

This qualified generic field specifies:

AGRE Agreement Date Date on which the agreement was signed.

Network Validated Rules

Date must be a valid date expressed as YYYYMMDD (Error code(s): T50).

MT 507 - 7. Field 13B: Number Identification: Agreement Version Number

Format

Option B :4!c/[8c]/30x (Qualifier) (Data Source Scheme) (Number)

Presence

Optional in mandatory subsequence A1

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	AGRE	N		B	Agreement Version Number

Definition

This qualified generic field specifies:

AGRE Agreement Version Number identifying the version of the agreement.
 Number

Network Validated Rules

Number (Format Option B) must not start or end with a slash '/' and must not contain two consecutive slashes '/' (Error code(s): T26).

Usage Rules

For ISDA agreements (:22F::AGRE//ISDA), Data Source Scheme must not be used and Number must be a year in the YYYY format.

MT 507 - 8. Field 70C: Narrative: Agreement Narrative

Format

Option C :4!c//4*35x (Qualifier) (Narrative)

Presence

Optional in mandatory subsequence A1

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	AGRE	N	C9	C	Agreement Narrative

Definition

This qualified generic field specifies:

AGRE Agreement Narrative Provides the description of the agreement.

Usage Rules

Unless bilaterally agreed between the Sender and the Receiver, narrative field 70a must not contain information that can be provided in a structured field.

MT 507 - 9. Field 16S: End of Block

Format

Option S 16c

Presence

Mandatory in mandatory subsequence A1

Definition

This field specifies the end of a block and the name of that block.

Codes

This field must contain the following code (Error code(s): T92):

AGRE Agreement

MT 507 - 10. Field 98a: Date/Time: Preparation Date/Time

Qualifier

(Error code(s): T89)

CPRC	Cancellation Processing Status	Provides the status of a cancellation request.
IPRC	Instruction Processing Status	Provides the status of an instruction.
REST	Response Status	Provides the status of the received message from a collateral management perspective.

Codes

If Qualifier is REST and Data Source Scheme is not present, Status Code must contain one of the following codes (Error code(s): K25):

ACCP	Partly Accepted	A part of the collateral is accepted, a part rejected.
ACCT	Accepted	The claim, substitution, proposal is fully accepted.
REJT	Rejected	The claim, substitution, proposal is fully rejected.
SUBR	Partly Accepted	Party A agrees with the return part of the substitution and accepts to wait for the proposal of the new collateral.

Codes

If Qualifier is IPRC and Data Source Scheme is not present, Status Code must contain one of the following codes (Error code(s): K25):

PACK	Acknowledged/ Accepted	Instruction has been acknowledged by the account servicer.
REJT	Rejected	Instruction has been rejected for further processing.

Codes

If Qualifier is CPRC and Data Source Scheme is not present, Status Code must contain one of the following codes (Error code(s): K25):

CAND	Cancellation Completed	Cancellation has been completed.
CANP	Pending Cancellation	Cancellation is pending. It is not known at this time whether cancellation can be affected.
DEND	Denied	Cancellation will not be executed.
PACK	Accepted	Cancellation request has been acknowledged for further processing by the account servicer.
REJT	Rejected	Cancellation has been rejected for further processing.

Usage Rules

If Status is ACCP, the rejected collateral is specified in sequence B.

Definition

This qualified generic field specifies:

CAND	Cancellation Reason	Specifies the reason why the related instruction is cancelled, or the related cancellation request is executed.
DEND	Denied Reason	Specifies the reason why the request was denied.
REJT	Rejection Reason	Specifies the reason why the instruction/request has a rejected status.

Codes

If Qualifier is REJT and Data Source Scheme is not present, Reason Code must contain one of the following codes (Error code(s): K24):

CONL	Concentration Limit Exceeded	Concentration limit was exceeded.
CPTY	Unknown Deal/ Exposure	Deal or exposure is unknown.
DISC	Disagree with Call Amount	Party A does not agree with the call amount.
DISE	Disagree with Exposure Amount	Party A does not agree with the exposure amount.
ICOL	Insufficient Collateral	Insufficient collateral proposed.

NARR	Narrative	See narrative field for reason.
ULNK	Unknown	Linked reference is unknown.

Codes

If Qualifier is CAND and Data Source Scheme is not present, Reason Code must contain one of the following codes (Error code(s): K24):

CANI	Cancelled By Yourselfs	Instruction has been cancelled as per your request.
CANS	Cancelled By System	Instruction has been cancelled by the system.
NARR	Narrative	See narrative field for reason.

Codes

If Qualifier is DEND and Data Source Scheme is not present, Reason Code must contain one of the following codes (Error code(s): K24):

DCAN	Denied Since Cancelled	Request was denied since the instruction has been cancelled.
DPRG	Denied Since In Progress	Request was denied because the instruction execution is in progress.

MT 508 Network Validated Rules

- C1** The 'Balance From' must be different from the 'Balance To'. The Sub-balance Type of field :93A::FROM must be different from the Sub-balance Type of field :93A::TOBA. This check applies to sequence B (Error code(s): E81).
- C2** If the message is a cancellation, that is, Function of the Message (field 23G) is CANC, then subsequence A1 (Linkages) must be present at least once in the message, and field :20C::PREV must be present in one and only one occurrence of A1; consequently, in all other occurrences of A1, field :20C::PREV is not allowed (Error code(s): E08).

Sequence A if field :23G: is ...	Then subsequence A1 is ...	And field :20C::PREV is ...
CANC	Mandatory (minimum one occurrence of A1 must be present)	Mandatory in one occurrence of subsequence A1, and not allowed in all other occurrences of subsequence A1

Sequence A if field :23G: is ...	Then subsequence A1 is ...	And field :20C::PREV is ...
NEWM	Optional	Not applicable

MT 508 Usage Rules

- This message must not be used to report the movement of securities out of or into a safekeeping account. It reports only on movements that affect the status/availability of the security, that is, movements from one sub-balance to another or intra-position transfers, within that safekeeping account.
- This message should also be used when the account servicer confirms an intra-position instruction, that is, following an MT 524.
- In case of blocking of shares, depending on your internal processing method, you can use either an MT 566 Corporate Action Confirmation or an MT 508 Intra-Position Advice. The MT 566 is to be used when the securities safekeeping account is debited and another securities safekeeping account is credited. The MT 508 is to be used when the securities remain in the same securities safekeeping account but are given a blocked status.

MT 508 Field Specifications

MT 508 - 1. Field 16R: Start of Block

Format

Option R 16c

Presence

Mandatory in mandatory sequence A

Definition

Definition

This qualified generic field specifies:

CORP	Corporate Action Reference	Reference assigned by the account servicer to unambiguously identify a CA event.
SEME	Sender's Message Reference	Reference assigned by the Sender to unambiguously identify the message.

Network Validated Rules

Reference must not start or end with a slash '/' and must not contain two consecutive slashes '/' (Error code(s): T26).

MT 508 - 3. Field 23G: Function of the Message

Format

Option G 4!c[/4!c] (Function) (Subfunction)

Presence

Mandatory (referenced in rule C2) in mandatory sequence A

Definition

This field identifies the function of the message.

Codes

Function must contain one of the following codes (Error code(s): T86):

CANC	Cancellation Request	Message requesting the cancellation of a previously sent message.
NEWM	New	New message.

Codes

Subfunction, when present, must contain one of the following codes (Error code(s): T85):

CODU	Copy Duplicate	Message is a copy to a party other than the account owner/account servicer, for information purposes and the message is a duplicate of a message previously sent.
COPY	Copy	Message is a copy to a party other than the account owner/account servicer, for information purposes.
DUPL	Duplicate	Message is for information/confirmation purposes. It is a duplicate of a message previously sent.

Usage Rules

To cancel a previously sent message, Function is CANC. The reference in the linkages sequence must contain the Sender's reference of the message to be cancelled. A copy of at least the mandatory fields of the message to be cancelled must be present; optional fields need not be present for SWIFT validation.

	or	PCTI	N		C	Processor Transaction Identification
	or	CMIT	N		C	Counterparty Market Infrastructure Transaction Identification

Definition

This qualified generic field specifies:

CMIT	Counterparty Market Infrastructure Transaction Identification	Identification of a counterparty transaction assigned by a market infrastructure other than a central securities depository, for example, Target2-Securities.
MITI	Market Infrastructure Transaction Identification	Identification of a transaction assigned by a market infrastructure other than a central securities depository, for example, Target2-Securities.
PCTI	Processor Transaction Identification	Identification of the transaction assigned by the processor of the instruction other than the account owner the account servicer and the market infrastructure.
POOL	Pool Reference	Collective reference identifying a set of messages.
PREV	Previous Message Reference	Message reference of the linked message which was previously sent.

RELA	Related Message Reference	Message reference of the linked message which was previously received.

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	M	BCAW	N		D	Blockchain Address or Wallet
	or	SAFE	N		A or B	Safekeeping Account

Definition

This qualified generic field specifies:

BCAW	Blockchain Address or Wallet	Blockchain address or wallet where digital assets are maintained. This is the equivalent of safekeeping account for digital assets.
SAFE	Safekeeping Account	Account where financial instruments are maintained.

Codes

In option B, the Data Source Scheme must be present and Account Type Code must contain the type of account as defined by the party identified in the Data Source Scheme.

Usage Rules

In option B, Account Type Code specifies the type of account needed to fully identify the account.

The account provided is the account of the party specified in this sequence.

MT 508 - 13. Field 94a: Place: Place of Safekeeping

Format

Option B	:4!c/[8c]/4!c[/30x]	(Qualifier) (Data Source Scheme) (Place Code) (Narrative)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	SAFE	N		B, C, or F	Place of Safekeeping

Definition

This qualified generic field specifies:

SAFE	Place of Safekeeping	Location where the financial instruments are/will be safekept.
------	----------------------	--

Codes

In option B, if Data Source Scheme is not present, Place Code must contain the following code (Error code(s): K94):

SHHE	Shares Held Elsewhere	Used for certain financial instruments, for example, US mutual funds, where settlement is internal only, that is, there is no external movement of securities.
------	-----------------------	--

Codes

In option F, Place Code must contain one of the following codes (Error code(s): K94):

CUST	Local Custodian	Financial instruments held at a local custodian.
ICSD	International Central Securities Depository	Financial instruments held at an International Central Securities Depository.
NCSD	National Central Securities Depository	Financial instruments held at a National Central Securities Depository.

SHHE Shares Held Elsewhere Used for certain financial instruments, for example, US mutual funds, where settlement is internal only, that is, there is no external movement of securities.

Network Validated Rules

- Country Code must be a valid ISO country code (Error code(s): T73).
- Identifier Code must be a registered BIC (Error code(s): T27, T28, T29, T45).
- Narrative (Format Option B) must not start or end with a slash '/' and must not contain two consecutive slashes '/' (Error code(s): T26).

MT 508 - 14. Field 36a: Quantity of Financial Instrument

Format

Option B :4!c//4!c/15d (Qualifier) (Quantity Type Code) (Quantity)

Option D :4!c//4!c/30d (Qualifier) (Quantity Type Code) (Quantity of Digital Tokens)

Presence

Mandatory in mandatory sequence B

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	M	ESTT	N		B or D	Quantity of Financial Instrument Settled
2	O	PSTT	N		B or D	Quantity of Financial Instrument Previously Settled
3	O	RSTT	N		B or D	Quantity of Financial Instrument Remaining to be Settled

Definition

This qualified generic field specifies:

- ESTT Quantity of Financial Instrument Settled Quantity of financial instrument moved from one sub-balance to another sub-balance.
- PSTT Quantity of Financial Instrument Previously Settled Quantity of financial instrument previously settled.

RSTT	Quantity of Financial Instrument Remaining to be Settled	Quantity of financial instrument remaining to be settled.
------	--	---

Codes

In option B, Quantity Type Code must contain one of the following codes (Error code(s): K36):

AMOR	Amortised Value	Quantity expressed as an amount representing the current amortised face amount of a bond, for example, a periodic reduction/increase of a bond's principal amount.
FAMT	Face Amount	Quantity expressed as an amount representing the face amount, that is, the principal, of a debt instrument.
UNIT	Unit Number	Quantity expressed as a number, for example, a number of shares.

Codes

In option D, Quantity Type Code must contain the following code (Error code(s): K36):

DITU	Digital Token Unit Number	Quantity of digital token expressed as a number, for example, a number of blockchain tokens.
------	---------------------------	--

Network Validated Rules

The integer part of Quantity must contain at least one digit. A decimal comma ',' is mandatory and is included in the maximum length (Error code(s): T40, T43).

Usage Rules

Format option D may only be used when the related account information in sequence B field :97D::BCAW is present.

MT 508 - 15. Field 13B: Number Identification: Securities Sub-balance Identification

Format

Option B :4!c/[8c]/30x (Qualifier) (Data Source Scheme) (Number)

Presence

Optional in mandatory sequence B

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	SSBI	N		B	Securities Sub-balance Identification

Definition

This qualified generic field specifies:

SSBI	Securities Sub-balance Identification	Number identifying a sub-balance constituting a quantity of financial instrument.
------	---------------------------------------	---

Network Validated Rules

Number (Format Option B) must not start or end with a slash '/' and must not contain two consecutive slashes '//' (Error code(s): T26).

MT 508 - 16. Field 19A: Amount: Collateral Monitor Amount

Format

Option A :4!c//[N]3!a15d (Qualifier) (Sign) (Currency Code) (Amount)

Presence

Optional in mandatory sequence B

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	COMT	N		A	Collateral Monitor Amount

Definition

This qualified generic field specifies:

COMT	Collateral Monitor Amount	Value of the collateral available for the delivery settlement process at the account level.
------	---------------------------	---

Network Validated Rules

The integer part of Amount must contain at least one digit. A decimal comma is mandatory and is included in the maximum length. The number of digits following the comma must not exceed the maximum allowed for the specified currency (Error code(s): C03, T40, T43).

Currency Code must be a valid ISO 4217 currency code (Error code(s): T52).

If Amount is zero, Sign must not be present (Error code(s): T14).

Usage Rules

Sign is used when the Amount is credited while the practice or the transaction type would normally imply that the Amount should be debited (or vice versa).

MT 508 - 17. Field 35B: Identification of the Financial Instrument

Format

Option B	[ISIN!e12!c] [4*35x]	(Identification of Security) (Description of Security)
----------	-------------------------	---

Presence

Mandatory in mandatory sequence B

Definition

This field identifies the financial instrument.

Network Validated Rules

At least Identification of a Security (Subfield 1) or Description of Security (Subfield 2) must be present; both may be present (Error code(s): T17).

ISIN is used at the beginning of Identification of Security (Subfield 1) and must be composed of uppercase letters only (Error code(s): T12).

Usage Rules

When used in Description of Security (Subfield 2), codes must start and end with a slash '/'.

When an ISIN identifier is not used it is strongly recommended that one of the following codes be used as the first characters of the Description of Security (Subfield 2):

[/2!a/]	The ISO two-digit country code, followed by the national scheme number.
[/TS/]	Followed by the ticker symbol.
[/XX/]	Bilaterally agreed or proprietary scheme which may be further identified by a code or short description identifying the scheme used.
[/4!c/]	Code identifying the type of security identifier used. This code must be one published by ISO 20022 (ExternalFinancialInstrumentIdentificationTypeCode).

It is strongly recommended that the ISIN be used.

MT 508 - 18. Field 16R: Start of Block

Format

Option R	16c
----------	-----

Presence

Mandatory in optional subsequence B1

Definition

This field specifies the start of a block and the name of that block.

Codes

This field must contain the following code (Error code(s): T92):

FIA Financial Instrument Attributes

MT 508 - 19. Field 94B: Place: Place of Listing

Format

Option B :4!c/[8c]/4!c[/30x] (Qualifier) (Data Source Scheme) (Place Code) (Narrative)

Presence

Optional in optional subsequence B1

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	PLIS	N		B	Place of Listing

Definition

This qualified generic field specifies:

PLIS Place of Listing Place where the referenced financial instrument is listed.

Codes

If Data Source Scheme is not present, Place Code must contain one of the following codes (Error code(s): K94):

EXCH Stock Exchange Place of listing is a stock exchange.
 OTCO Over The Counter Place of listing is over the counter.

Network Validated Rules

Narrative must not start or end with a slash '/' and must not contain two consecutive slashes '/' (Error code(s): T26).

Usage Rules

Place of Listing is to be identified by its Market Identifier Code (MIC).

Example

:94B::PLIS//EXCH/XNYS

MT 508 - 20. Field 22F: Indicator

Format

Option F :4!c/[8c]/4!c (Qualifier) (Data Source Scheme)
 (Indicator)

Presence

Optional in optional subsequence B1

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	MICO	N		F	Method of Interest Computation Indicator
2	O	FORM	N		F	Form of Securities Indicator
3	O	PFRE	N		F	Payment Frequency Indicator
4	O	PAYS	N		F	Payment Status Indicator
5	O	CFRE	N		F	Variable Rate Change Frequency Indicator

Definition

This qualified generic field specifies:

CFRE	Variable Rate Change Frequency Indicator	Specifies the frequency of change to the variable rate of an interest bearing instrument.
FORM	Form of Securities Indicator	Specifies the form of the financial instrument.
MICO	Method of Interest Computation Indicator	Specifies the computation method of (accrued) interest of the financial instrument.
PAYS	Payment Status Indicator	Specifies the status of the payment of a financial instrument at a particular time, as agreed with the issuer.
PFRE	Payment Frequency Indicator	Specifies the frequency of a payment.

Codes

If Qualifier is MICO and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

A001	30/360 (ISDA) or 30/360 (American Basic Rule)	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February, and provided that the interest period started on a 30th or a 31st. This means that a 31st is assumed to be a 30th if the period started on a 30th or a 31st and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). It is the most commonly used 30/360 method for US straight and convertible bonds.
A002	30/365	Method whereby interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and a 365-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th).
A003	30/Actual	Method whereby interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and the assumed number of days in a year in a way similar to the Actual/Actual (ICMA). Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). The assumed number of days in a year is computed as the actual number of days in the coupon period multiplied by the number of interest payments in the year.
A004	Actual/360	Method whereby interest is calculated based on the actual number of accrued days in the interest period and a 360-day year.
A005	Actual/365 (Fixed)	Method whereby interest is calculated based on the actual number of accrued days in the interest period and a 365-day year.
A006	Actual/Actual (ICMA)	Method whereby interest is calculated based on the actual number of accrued days and the assumed number of days in a year, that is, the actual number of days in the coupon period multiplied by the number of interest payments in the year. If the coupon period is irregular (first or last coupon), it is extended or split into quasi interest periods that have the length of a regular coupon period and the computation is operated separately on each quasi interest period and the intermediate results are summed up.
A007	30E/360 or Eurobond basis	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be equivalent to a 30 Feb. However, if the last day of the maturity coupon period is the last day of February, it will not be assumed to be a 30th. It is a variation of the 30/360 (ICMA) method commonly used for eurobonds. The usage of this variation is only relevant when the coupon periods are scheduled to end on the last day of the month.
A008	Actual/Actual (ISDA)	Method whereby interest is calculated based on the actual number of accrued days of the interest period that fall on a normal year, divided by 365, added to the actual number of days of the interest period that fall on a leap year, divided by 366.

A009	Actual/365L or Actual/Actual (basic rule)	Method whereby interest is calculated based on the actual number of accrued days and a 365-day year (if the coupon payment date is NOT in a leap year) or a 366-day year (if the coupon payment date is in a leap year).
A010	Actual/Actual (AFB)	Method whereby interest is calculated based on the actual number of accrued days and a 366-day year (if 29 Feb falls in the coupon period) or a 365-day year (if 29 Feb does not fall in the coupon period). If a coupon period is longer than one year, it is split by repetitively separating full year sub-periods counting backwards from the end of the coupon period (a year backwards from a 28 Feb being 29 Feb, if it exists). The first of the sub-periods starts on the start date of the accrued interest period and thus is possibly shorter than a year. Then the interest computation is operated separately on each sub-period and the intermediate results are summed up.
A011	30/360 (ICMA) or 30/360 (basic rule)	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). It is the most commonly used 30/360 method for non-US straight and convertible bonds issued before 01/01/1999.
A012	30E2/360 or Eurobond basis model 2	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for the last day of February whose day of the month value shall be adapted to the value of the first day of the interest period if the latter is higher and if the period is one of a regular schedule. This means that a 31st is assumed to be a 30th and the 28th Feb of a non-leap year is assumed to be equivalent to a 29th Feb when the first day of the interest period is a 29th, or to a 30th Feb when the first day of the interest period is a 30th or a 31st. The 29th Feb of a leap year is assumed to be equivalent to a 30th Feb when the first day of the interest period is a 30th or a 31st. Similarly, if the coupon period starts on the last day of February, it is assumed to produce only one day of interest in February as if it was starting on a 30th Feb when the end of the period is a 30th or a 31st, or two days of interest in February when the end of the period is a 29th, or 3 days of interest in February when it is the 28th Feb of a non-leap year and the end of the period is before the 29th.
A013	30E3/360 or Eurobond basis model 3	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be equivalent to a 30 Feb. It is a variation of the 30E/360 (or Eurobond basis) method where the last day of February is always assumed to be a 30th, even if it is the last day of the maturity coupon period.
A014	Actual/365NL or Actual/365 No Leap	Method whereby interest is calculated based on the actual number of accrued days in the interest period, excluding any leap day from the count, and a 365-day year.
OTHR	Other	Other method than A001-A014. See Narrative.

Codes

If Qualifier is FORM and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

BEAR	Bearer Security	Financial instruments are in bearer form.
REGD	Registered Security	Financial instruments are in registered form.

Codes

If Qualifier is PFRE and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

ANNU	Annual	Payment frequency is annual.
MNTH	Monthly	Payment frequency is monthly.
QUTR	Quarterly	Payment frequency is quarterly.
SEMI	Semi-Annual	Payment frequency is semi-annual.
WEEK	Weekly	Payment frequency is weekly.

Codes

If Qualifier is PAYS and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

FULL	Fully Paid	Financial instrument is fully paid.
NILL	Nil Paid	Financial instrument is nil paid.
PART	Partially Paid	Financial instrument is partially paid.

Codes

If Qualifier is CFRE and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

ANNU	Annual	Frequency is annual.
MNTH	Monthly	Frequency is monthly.
QUTR	Quarterly	Frequency is quarterly.
SEMI	Semi-Annual	Frequency is semi-annual.
WEEK	Weekly	Frequency is weekly.

1	O	CLAS	N		A or C	Classification Type
2	O	OPST	N		B	Option Style
3	O	OPTI	N		B	Option Type

Definition

This qualified generic field specifies:

CLAS	Classification Type	Classification type of the financial instrument, for example, ISO Classification of Financial instrument (CFI).
OPST	Option Style	Specifies how an option can be exercised.
OPTI	Option Type	Specifies whether it is a call option or a put option.

Codes

In option B, if Qualifier is OPST and Data Source Scheme is not present, Instrument Type Code must contain one of the following codes (Error code(s): K12):

AMER	American Style	Option can be exercised before or on expiry date.
EURO	European Style	Option can be exercised on expiry date only.

Codes

In option B, if Qualifier is OPTI and Data Source Scheme is not present, Instrument Type Code must contain one of the following codes (Error code(s): K12):

CALL	Call Option	A right to buy a defined quantity of an asset by a certain date at an agreed price.
PUTO	Put Option	A right to sell a defined quantity of an asset by a certain date at an agreed price.

Usage Rules

When option C is used, CFI code must contain a valid ISO CFI code.

To use the codes associated with the ISITC code for security type, /ASCT/, Data Source Scheme must be ISIT and Instrument Code or Description must contain a valid ISITC security type code.

Example

:12C::CLAS//ESVUFR

(CFI code for equity, common share, voting rights, unrestricted, fully paid and registered).

Definition

This qualified generic field specifies:

CUFC	Current Factor	Rate expressed as a decimal between 0 and 1 defining the outstanding principal of the financial instrument (for factored securities).
INDX	Index Factor	Public index rate used for inflation adjustment.
INTR	Interest Rate	Annualised interest rate of a financial instrument used to calculate the actual interest rate of the coupon or the accrued interest.
NWFC	Next Factor	Rate expressed as a decimal between 0 and 1 that will be applicable as of the next factor date and defines the outstanding principal of the financial instrument (for factored securities).
NXRT	Next Interest Rate	Interest rate applicable to the next interest payment period in relation to variable rate instruments.

PRFC	Previous Factor	Rate expressed as a decimal between 0 and 1 that was applicable before the current factor and defines the outstanding principal of the financial instrument (for factored securities).
YTMR	Yield To Maturity Rate	Rate of return anticipated on a bond when held until maturity date.

Network Validated Rules

The integer part of Rate must contain at least one digit. A decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).

If Rate is zero, Sign must not be present (Error code(s): T14).

Usage Rules

Sign must be present when Rate is negative.

Except if notified differently in the rate definition, when used with format option A (:4!c//[N]15d), the rate must be expressed as a percentage, not as a decimal fraction (12% must be identified by 12, and not 0,12).

2	O	EXER	N		A or B	Exercise Price

Definition

This qualified generic field specifies:

EXER	Exercise Price	<ol style="list-style-type: none"> Price at which the security will be purchased/sold if warrant is exercised, represented either as an actual amount (option B) or a percentage (option A). Price at which a bond is converted, represented either as an actual amount (option B) or a percentage (option A). Strike price of an option, represented either as an actual amount (option B) or a percentage (option A).
INDC	Indicative Price	Estimated price, for example, for valuation purposes.
MRKT	Market Price	Last reported/known price of a financial instrument in a market.

Codes

In option A, Percentage Type Code must contain one of the following codes (Error code(s): K90):

DISC	Discount	Price expressed as the number of percentage points below par, for example, a discount price of 2.0% equals a price of 98 when par is 100.
PRCT	Percentage	Price expressed as a percentage of par.
PREM	Premium	Price expressed as the number of percentage points above par, for example, a premium price of 2.0% equals a price of 102 when par is 100.

MINO	Minimum Nominal Quantity	Minimum nominal quantity of financial instrument.
SIZE	Contract Size	Ratio or multiplying factor used to convert one contract into a financial instrument quantity.

Codes

In option B, Quantity Type Code must contain one of the following codes (Error code(s): K36):

AMOR	Amortised Value	Quantity expressed as an amount representing the current amortised face amount of a bond, for example, a periodic reduction/increase of a bond's principal amount.
FAMT	Face Amount	Quantity expressed as an amount representing the face amount, that is, the principal, of a debt instrument.
UNIT	Unit Number	Quantity expressed as a number, for example, a number of shares.

Codes

In option D, Quantity Type Code must contain the following code (Error code(s): K36):

DITU	Digital Token Unit Number	Quantity of digital token expressed as a number, for example, a number of blockchain tokens.
------	---------------------------	--

Network Validated Rules

The integer part of Quantity must contain at least one digit. A decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).

Usage Rules

Format option D may only be used when the related account information in sequence B field :97D::BCAW is present.

MT 508 - 29. Field 35B: Identification of the Financial Instrument

Format

Option B	[ISIN!e12!c] [4*35x]	(Identification of Security) (Description of Security)
----------	-------------------------	---

Presence

Optional in optional subsequence B1

Definition

This field identifies the underlying financial instrument.

Network Validated Rules

At least Identification of a Security (Subfield 1) or Description of Security (Subfield 2) must be present; both may be present (Error code(s): T17).

ISIN is used at the beginning of Identification of Security (Subfield 1) and must be composed of uppercase letters only (Error code(s): T12).

Usage Rules

The financial Instrument field 35B in the Financial Instrument Attributes subsequence must only be used for the identification of the underlying instrument(s) of a derivative. It must not be used, for example, for the listing of the underlying securities of an index.

When used in Description of Security (Subfield 2), codes must start and end with a slash '/'.

When an ISIN identifier is not used it is strongly recommended that one of the following codes be used as the first characters of the Description of Security (Subfield 2):

- [!2!a] The ISO two-digit country code, followed by the national scheme number.
- [/TS/] Followed by the ticker symbol.
- [/XX/] Bilaterally agreed or proprietary scheme which may be further identified by a code or short description identifying the scheme used.
- [/4!c/] Code identifying the type of security identifier used. This code must be one published by ISO 20022 (ExternalFinancialInstrumentIdentificationTypeCode).

It is strongly recommended that the ISIN be used.

Example

An ISIN will be identified as follows:

:35B:ISIN US0123456704

A SEDOL will be identified as follows:

:35B:/GB/0123456

A CUSIP will be identified as follows:

:35B:/US/012345670

A proprietary scheme will be identified as follows:

:35B:/XX/SCHEMEUSED 0123456700

MT 508 - 30. Field 70E: Narrative: Financial Instrument Attribute Narrative

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	CAEV	N		F	Corporate Action Event Indicator
2	O	PARS	N		F	Partial Settlement Indicator

Definition

This qualified generic field specifies:

CAEV	Corporate Action Event Indicator	Specifies the type of corporate event.
PARS	Partial Settlement Indicator	Specifies partial settlement information.

Codes

If Qualifier is CAEV and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

ACCU	Accumulation	Funds related event in which the income (for example accumulation units) that accrues during an accounting period is retained within the fund instead of being paid away to investors. The retained income is nonetheless deemed to have been distributed to investors for tax purposes.
ACTV	Trading Status: Active	Trading in the security has commenced or security has been re-activated after a suspension in trading.
ATTI	Attachment	Combination of different security types to create a unit. Units are usually comprised of warrants and bonds or warrants and equities. Securities may be combined at the request of the security holder or based on market convention.
BIDS	Repurchase Offer/ Issuer Bid/Reverse Rights	Offer to existing holders by the issuing company to repurchase its own securities. The objective of the offer is to reduce the number of outstanding securities.
BMET	Bond Holder Meeting	Physical meeting of bond holders.
BONU	Bonus Issue/ Capitalisation Issue	Bonus or capitalisation issue. Security holders receive additional assets free of payment from the issuer, in proportion to their holding.
BPUT	Put Redemption	Early redemption of a bond at the election of the bondholder subject to the terms and condition of the issue with no reduction in nominal value.
BRUP	Bankruptcy	Legal status of a company unable to pay creditors. Bankruptcy usually involves a formal court ruling. Securities may become valueless.
CAPD	Capital Distribution	The corporate event pays shareholders an amount in cash issued from the capital account. There is no reduction to the face value of a single share (or the share has no par value). The number of circulating shares remains unchanged.
CAPG	Capital Gains Distribution	Distribution of profits resulting from the sale of securities. Shareholders of mutual funds, unit trusts, or sicavs may be recipients of capital gains distributions which are often reinvested in additional equity of the fund.
CAPI	Capitalisation	Increase of the current principal of a debt instrument without increasing the nominal value. It normally arises from the incorporation of due but unpaid interest into the principal. This is commonly done by increasing the pool factor value, for example, capitalisation, and negative amortisation.
CERT	Non-US TEFRA D Certification	Non-US beneficial owner certification requirement for exchange of temporary to permanent notes.
CHAN	Change	Information regarding a change further described in the corporate action details.
CLSA	Class Action/ Proposed Settlement	Situation where interested parties seek restitution for financial loss. The security holder may be offered the opportunity to join a class action proceeding and would need to respond with an instruction.

CMET	Court Meeting	Announcement of a meeting at a Court.
CONS	Consent	Procedure that aims to obtain consent of holder to a proposal by the issuer or a third party without convening a meeting. For example, consent to change the terms of a bond.
CONV	Conversion	Conversion of securities, generally convertible bonds or preferred equity, into another form of securities, usually common equity.
COOP	Company Option	A company option may be granted by the company, allowing the holder to take up shares at some future date(s) at a pre arranged price in the company. A company may not grant options which enable the holder to take up unissued shares at a time which is five or more years from the date of the grant. Option holders are not members of a company. They are contingent creditors of a company and hence may, in some instances, be entitled to vote on and be bound by a scheme of arrangement between the creditors and the company. As many options have multiple exercise periods a company option will either lapse or carry on to the next expiry date.
CREV	Credit Event	An occurrence of credit derivative for which the issuer of one or several underlying securities is unable to fulfill its financial obligations (as defined in terms and conditions).
DECR	Decrease in Value	Reduction of face value of a single share or the value of fund assets. The number of circulating shares/units remains unchanged. This event may include a cash payout to holders.
DETI	Detachment	Separation of components that comprise a security, usually units comprised of warrants and bonds or warrants and equities. Units may be broken up at the request of the security holder or based on market convention.
DFLT	Bond Default	Failure by the company to perform obligations defined as default events under the bond agreement and that have not been remedied.
DLST	Trading Status: Delisted	Security is no longer able to comply with the listing requirements of a stock exchange and is removed from official board quotation.
DRAW	Drawing	Securities are redeemed in part before the scheduled final maturity date. It is done without any pool factor reduction. The redemption is reflected in a debit of the face amount (FAMT). Drawing is distinct from partial call since drawn bonds are chosen by lottery. Therefore, not every holder is affected in the same way.
DRCA	Cash Distribution From Non-Eligible Securities Sales	Distribution to shareholders of cash resulting from the selling of non-eligible securities, for example, in the frame of a depositary receipt program.
DRIP	Dividend Reinvestment	Dividend payment where cash dividend is rolled over into additional shares in the issuing company.
D_SCL	Disclosure	Requirement for holders or beneficial owners to disclose their name, location and holdings of any issue to the issuer.
DTCH	Dutch Auction	An action by a party wishing to acquire a security. Holders of the security are invited to make an offer to sell, within a specific price range. The acquiring party will buy from the holder with lowest offer.

DVCA	Cash Dividend	Distribution of cash to shareholders, in proportion to their equity holding. Ordinary dividends are recurring and regular.
DVOP	Dividend Option	Distribution of a dividend to shareholders with a choice of benefit to receive. Shareholders may choose to receive shares, cash or both.
DVSC	Scrip Dividend/ Payment	Dividend or interest paid in the form of scrip.
DVSE	Stock Dividend	Dividend paid to shareholders in the form of equities of the issuing corporation.
EXOF	Exchange	Exchange of holdings for other securities and/or cash. The exchange can be either mandatory or voluntary involving the exchange of outstanding securities for different securities and/or cash. For example "exchange offer", "capital reorganisation" or "funds separation".
EXRI	Call on Intermediate Securities	Call or exercise on nil paid securities or intermediate securities resulting from an intermediate securities distribution (RHDI). This code is used for the second event, when an intermediate securities' issue (rights/coupons) is composed of two events, the first event being the distribution of intermediate securities.
EXTM	Maturity Extension	As stipulated in the security's Terms and Conditions, the issuer or the holder may prolong the maturity date of a security. After extension, the security details may differ from the original issue. An issuer initiated extension may be subject to holder's approval.
EXWA	Warrant Exercise	Warrant conversion. Option offered to holders to buy (call warrant) or to sell (put warrant) a specific amount of stock, cash, or commodity, at a predetermined price, during a predetermined period of time (which usually corresponds to the life of the issue).
INCR	Increase in Value	Increase in the face value of a single security. The number of circulating securities remains unchanged. This event may include a cash payout to holders.
INFO	Information	Information provided by the issuer having no accounting/financial impact on the holder.
INTR	Interest Payment	Interest payment distributed to holders of an interest bearing asset.
LIQU	Liquidation Dividend/ Liquidation Payment	A distribution of cash, assets or both. Debt may be paid in order of priority based on preferred claims to assets specified by the security.
MCAL	Full Call/Early Redemption	The redemption of an entire issue outstanding of securities, for example, bonds, preferred equity, funds, by the issuer or its agent, for example, asset manager, before final maturity.
MEET	Annual General Meeting	Annual general meeting.

MRGR	Merger	Exchange of outstanding securities, initiated by the issuer which may include options, as the result of two or more companies combining assets, that is, an external, third party company. Cash payments may accompany share exchange.
NOOF	Non-Official Offer	Offers that are not supervised or regulated by an official entity and being offered by a party, for example a broker, usually at a discount price, for example broker offer, mini-tender, mini odd lot offer or third party offer.
ODLT	Odd Lot Sale/ Purchase	Sale or purchase of odd-lots to/from the issuing company, initiated either by the holder of the security or through an offer made by the issuer.
OMET	Ordinary General Meeting	Ordinary general meeting.
OTHR	Other Event	Other event.
PARI	Pari-Passu	Assimilation. Occurs when securities with different characteristics, for example, shares with different entitlements to dividend or voting rights, become identical in all respects, that is, pari-passu. May be scheduled in advance, for example, shares resulting from a bonus may become fungible after a pre-set period of time, or result from outside events, for example, merger, reorganisation, issue of supplementary tranches, etc.
PCAL	Partial Redemption Without Pool Factor Reduction	Securities are redeemed in part before their scheduled final maturity date. It is done without any pool factor reduction. The redemption is reflected in a debit of the face amount (FAMT).
PDEF	Partial Defeasance/ Pre-Funding	Issuer has money set aside to redeem a portion of an issue and the indenture states that the securities could be called earlier than the stated maturity.
PINK	Pay In Kind	Interest payment, in any kind except cash, distributed to holders of an interest bearing asset.
PLAC	Place of Incorporation	Changes in the state of incorporation for US companies and changes in the place of incorporation for foreign companies. Where shares need to be registered following the incorporation change, the holder(s) may have to elect the registrar.
PPMT	Instalment Call	An instalment towards the purchase of equity capital, subject to an agreement between an issuer and a purchaser.
PRED	Partial Redemption With Pool Factor Reduction	Securities are redeemed in part before their scheduled final maturity date. The redemption is reflected in a pool factor reduction. No movement of securities occurs.
PRIO	Priority Issue	Form of open or public offer where, due to a limited amount of securities available, priority is given to existing shareholders.
REDM	Final Maturity	The redemption of an entire issue outstanding of securities, for example, bonds, preferred equity, funds, by the issuer or its agent, for example, asset manager, at final maturity.

REDO	Redenomination	Event by which the unit (currency and/or nominal) of a security is restated, for example, nominal/par value of security in a national currency is restated in another currency.
REMK	Remarketing Agreement	Purchase and sale of remarketed preferred equities/bonds through the negotiation of interest rate between the issuers and the holders.
RHDI	Intermediate Securities Distribution	The distribution of intermediate securities that gives the holder the right to take part in a future event.
RHTS	Rights Issue/ Subscription Rights/Rights Offer	Offer to holders of a security to subscribe for additional securities via the distribution of an intermediate security. Both processes are included in the same event.
SHPR	Shares Premium Dividend	This corporate event pays shareholders an amount in cash issued from the shares premium reserve. It is similar to a dividend but with different tax implications.
SMAL	Smallest Negotiable Unit	Modification of the smallest negotiable unit of shares in order to obtain a new negotiable unit.
SOFF	Spin-Off	A distribution of securities issued by another company. The distributed securities may either be of a newly created or of an existing company. For example, spin-off, demerger, unbundling, divestment.
SPLF	Stock Split/Change in Nominal Value/ Subdivision	Increase in a corporation's number of outstanding equities without any change in the shareholder's equity or the aggregate market value at the time of the split. Equity price and nominal value are reduced accordingly.
SPLR	Reverse Stock Split/Change in Nominal Value	Decrease in a company's number of outstanding equities without any change in the shareholder's equity or the aggregate market value at the time of the split. Equity price and nominal value are increased accordingly.
SUSP	Trading Status: Suspended	Trading in the security has been suspended.
TEND	Tender/Acquisition/ Takeover/Purchase Offer	An offer made to holders by a third party, requesting them to sell (tender) or exchange their securities.
TNDP	Tax On Non-Distributed Proceeds	Taxable component on non-distributed proceeds, for example, Australian deemed income or US 871m income regulation.
TREC	Tax Reclaim	Event related to tax reclaim activities.
WRTH	Worthless	Booking out of valueless securities.
WTRC	Withholding Tax Relief Certification	Certification process for withholding tax reduction or exemption based on the tax status of the holder.

4	O	EMAI	N		G	Email Address
5	O	LOCA	N		D	Location

Definition

This qualified generic field specifies:

ADDR	Address	Street name and number in a mailing address.
CITY	City	City or town.
DOMI	Country of Domicile	Country in which a person is permanently domiciled (the place of a person's permanent home).
EMAI	Email Address	Address for electronic mail (e-mail).
LOCA	Location	State, province, district, or else.

Network Validated Rules

Country Code must be a valid ISO country code (Error code(s): T73).

Usage Rules

The at sign @ is not part of the X character set of the SWIFT FIN network. Therefore, SWIFT recommends to use the hexadecimal EBCDIC code, preceded by two question marks (??) as escape sequence.

An email address would be represented as: `firstname.lastname??7Corganisation.com`

The data in field 94a must belong to the party identified in field 95a. For example, if field 95a is used with qualifier NOMI, the address in field 94a must belong to the nominee. If field 95a is used with qualifier OWND, the address in field 94a must belong to the beneficial owner, etc.

This qualified generic field specifies:

RMOD	Requested Modification Date/Time	Date/time at which the registration details are to be modified.
RREG	Requested Registration Date/Time	Date/time at which the financial instruments are to be registered.

Network Validated Rules

Date must be a valid date expressed as YYYYMMDD (Error code(s): T50).

Time must be a valid time expressed as HHMMSS (Error code(s): T38).

MT 510 - 23. Field 35B: Identification of the Financial Instrument

Format

Option B	[ISIN!e12!c] [4*35x]	(Identification of Security) (Description of Security)
----------	-------------------------	---

Presence

Optional in optional sequence B

Definition

This field identifies the financial instrument.

Network Validated Rules

At least Identification of a Security (Subfield 1) or Description of Security (Subfield 2) must be present; both may be present (Error code(s): T17).

ISIN is used at the beginning of Identification of Security (Subfield 1) and must be composed of uppercase letters only (Error code(s): T12).

Usage Rules

When used in Description of Security (Subfield 2), codes must start and end with a slash '/'.

When an ISIN identifier is not used it is strongly recommended that one of the following codes be used as the first characters of the Description of Security (Subfield 2):

[/2!a/]	The ISO two-digit country code, followed by the national scheme number.
[/TS/]	Followed by the ticker symbol.
[/XX/]	Bilaterally agreed or proprietary scheme which may be further identified by a code or short description identifying the scheme used.
[/4!c/]	Code identifying the type of security identifier used. This code must be one published by ISO 20022 (ExternalFinancialInstrumentIdentificationTypeCode).

It is strongly recommended that the ISIN be used.

MT 510 - 24. Field 36a: Quantity of Financial Instrument: Quantity of Financial Instrument to be Registered

Definition

This qualified generic field specifies:

QREG	Quantity of Financial Instrument to be Registered	Total quantity of financial instrument to be registered.
------	---	--

Codes

In option B, Quantity Type Code must contain one of the following codes (Error code(s): K36):

AMOR	Amortised Value	Quantity expressed as an amount representing the current amortised face amount of a bond, for example, a periodic reduction/increase of a bond's principal amount.
FAMT	Face Amount	Quantity expressed as an amount representing the face amount, that is, the principal, of a debt instrument.
UNIT	Unit Number	Quantity expressed as a number, for example, a number of shares.

Codes

In option D, Quantity Type Code must contain the following code (Error code(s): K36):

DITU	Digital Token Unit Number	Quantity of digital token expressed as a number, for example, a number of blockchain tokens.
------	---------------------------	--

Network Validated Rules

The integer part of Quantity must contain at least one digit. The decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).

Usage Rules

Format option D may only be used when the related account information in sequence B field :97D::BCAW is present.

MT 510 - 25. Field 97a: Account

Format

Option A :4!c//35x (Qualifier) (Account Number)

Option D :4!c/[8c]/140x (Qualifier) (Data Source Scheme)

Definition

This qualified generic field specifies:

BCAW	Blockchain Address or Wallet	Blockchain address or wallet where digital assets are maintained. This is the equivalent of safekeeping account for digital assets.
SAFE	Safekeeping Account	Account where financial instruments are maintained.

MT 510 - 26. Field 16S: End of Block

Format

Option S 16c

Presence

Mandatory in optional sequence B

Definition

This field specifies the end of a block and the name of that block.

Codes

This field must contain the following code (Error code(s): T92):

REGDET Registration Details

MERE	Recipient of Message	Party that is the final destination of the message, if other than the Receiver.
------	----------------------	---

Network Validated Rules

Identifier Code must be a registered BIC (Error code(s): T27, T28, T29, T45).

Proprietary code (Format Option R) and Name and Address (Format Option Q) must not start or end with a slash '/' and must not contain two consecutive slashes '//'. For field formats with more than 1 line, the rule applies for each line (Error code(s): T26).

Usage Rules

In option R, Proprietary Code specifies a local national code or market segment code identifying the party.

MT 510 - 29. Field 16S: End of Block

Format

Option S	16c
----------	-----

Presence

Mandatory in optional sequence C

Definition

This field specifies the end of a block and the name of that block.

Codes

This field must contain the following code (Error code(s): T92):

ADDINFO	Additional Information

MT 513 Client Advice Of Execution

MT 513 Scope

This message type is sent by the executing party, for example, the broker-dealer, to an instructing party, for example, an institution, or its authorised representative. It may also be sent by a point of execution to the party which had previously submitted an order to buy or sell.

This message is used to provide the instructing party with brief and early information about a deal executed at its instruction. This advice applies to a deal that cannot yet be fully confirmed, for example, because it is a block trade which is to be allocated.

This message may also be used to:

- request the cancellation of a previously sent advice of execution
- re-send an advice of execution previously sent
- provide a third party with a copy of the message (be it the advice of execution or request for cancellation) being sent.

This message may be sent directly or via an ETC service provider between the parties to the deal. It must not be sent to a custodian.

Presence

Mandatory in mandatory sequence A

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	M	SEME	N		C	Sender's Message Reference

Definition

This qualified generic field specifies:

SEME	Sender's Message Reference	Reference assigned by the Sender to unambiguously identify the message.
------	----------------------------	---

Network Validated Rules

Reference must not start or end with a slash '/' and must not contain two consecutive slashes '/' (Error code(s): T26).

MT 513 - 3. Field 23G: Function of the Message

Format

Option G 4!c[/4!c] (Function) (Subfunction)

Presence

Mandatory (referenced in rule C3) in mandatory sequence A

Definition

This field identifies the function of the message.

Codes

Function must contain one of the following codes (Error code(s): T86):

CANC	Cancellation Request	Message requesting the cancellation of a previously sent message.
NEWM	New	New message.

Codes

When present, Subfunction must contain one of the following codes (Error code(s): T85):

CODU	Copy Duplicate	Message is a copy to a party other than the account owner/account servicer, for information purposes and the message is a duplicate of a message previously sent.
------	----------------	---

COPY	Copy	Message is a copy to a party other than the account owner/account servicer, for information purposes.
DUPL	Duplicate	Message is for information/confirmation purposes. It is a duplicate of a message previously sent.

Usage Rules

To cancel a previously sent advice, Function is CANC. Reference in the linkage sequence must contain the Sender's reference of the message to be cancelled. A copy of at least the mandatory fields of the message to be cancelled must be present; optional fields need not be present for SWIFT validation.

Definition

This qualified generic field specifies:

DEAL Deal Price Price of the traded financial instrument.

Codes

In option A, Percentage Type Code must contain one of the following codes (Error code(s): K90):

DISC Discount Price expressed as the number of percentage points below par, for example, a discount price of 2.0% equals a price of 98 when par is 100.

PRCT Percentage Price expressed as a percentage of par.

PREM Premium Price expressed as the number of percentage points above par, for example, a premium price of 2.0% equals a price of 102 when par is 100.

YIEL Yield Price expressed as a yield.

Codes

In option B, Amount Type Code must contain one of the following codes (Error code(s): K90):

ACTU Actual Amount Price expressed as an amount of currency per unit or per share.

DISC	Discount	Price expressed as a discount amount.
PREM	Premium	Price expressed as a premium.

Network Validated Rules

- Currency Code must be a valid ISO 4217 currency code (Error code(s): T52).
- The integer part of Price must contain at least one digit. A decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).
- Sign may only be present if Percentage Type Code is YIEL (Error code(s): T69).
- If Price is zero, Sign must not be present (Error code(s): T14).

Usage Rules

- The number of decimal digits in Price is not validated against the currency specified.
- Sign must be present when Price is negative.

Codes

In option F, if Qualifier is TOOR and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

ALNO	All or None	A round-lot market or limit-price order which must be executed in its entirety or not at all; unlike 'fill or kill', these orders are not cancelled if not executed as soon as received.
BCSE	Buy Contra Short Exempt	Order to buy contra short exempt.

BCSH	Buy Contra Short	Order to buy contra short.
BMIN	Buy Minus	Order to buy at a price lower than the current market price. This is an order to buy a stated amount of a financial instrument provided that its price is not higher than the last sale if the last sale was a minus or zero minus tick, not higher than the last sale minus the minimum fractional change in the stock if the last sale was a plus or zero plus tick. The price limit indicates the highest price at which the order can be executed.
CARE	Carefully	Order that is not to be executed as a whole because it may disturb the price.
COMB	Combination Order	Order that is linked to another order to buy or sell and must be executed as a unit, both or none, or cancelled as a unit.
DISC	Discretionary	Order where the executing broker or investment manager decides on the quantity or price.
DNIN	Do Not Increase	Limit order to buy or stop order to sell or stop limit order that is not to be increased in shares on the ex-dividend date as a result of a stock dividend or distribution.
DNRE	Do Not Reduce	Limit order to buy or stop order to sell, or stop-limit order to sell that is not to be reduced in price by the amount of an ordinary cash dividend. Applies only to ordinary stock dividends; should be reduced for other distributions.
ICEB	Iceberg Order	Type of limit order whose overall quantity is not transparent to the market. Rather, only a client-defined part of the order is shown to the market (the 'tip of the iceberg'). Upon execution of the first 'tip' (that is partial execution to the client while for the market it does not appear to be a 'partial') the system releases the next 'tip' of the same size to the market until the 'iceberg' has been melted down successfully. Different from a usual care order.
LIWI	Limit With	Order to be executed at a limit price, with a round-lot (or board-lot) sales; valid only for odd lot orders.
LIWO	Limit Without	Order to be executed at a limit price, without a round-lot (or board-lot) sales; valid only for odd lot orders.
LMTO	Limit Order	Order to buy at the indicated price limit or lower or an order to sell at the indicated limit price or higher.
MAKT	At Market	Order to buy or sell a specified amount of a financial instrument at the quoted market price or better.
MANH	Market Not Held	Order to buy or sell a specified amount of a financial instrument at the quoted market price or better with some discretion on the price limit.
MTLO	Market to Limit Order	Type of order that couples the high possibility of execution (Market Order) with a protection against unwanted price fluctuations (Limit Order).
MUTO	Market Until Touched	Order to buy or sell a specified amount of a financial instrument at the quoted market price or better with some discretion on the price limit.

NOHE	Not Held	Order that may be executed in partials or outside the hours of the exchange or other exchange rules.
ORLI	Order Lie	Order that is related to another order where the second order may be cancelled without cancelling the first. Normally, the sell order must be executed before the buy order.
SLOS	Stop Loss	Order to sell that sets the sell price below the market price.
SPLU	Sell Plus	Order to sell a stated amount provided that the price is not lower than the last sale price if the last sale was a plus or zero plus tick and not lower than the last sale minus the minimum fractional change in the financial instrument if the last sale was a minus or zero minus tick.
STLI	Stop Limit	Stop order to buy (sell) that becomes a limit order at the limit price when the financial instrument trades at or above (below) the stop price after the order is submitted.
STOP	Stop Order	Order to buy that becomes a market order when the financial instrument trades at or above the stop price after the order is submitted or an order to sell which becomes a market order when the financial instrument trades at or below the stop price.
SSEX	Sell Short Exempt	Order to sell short which is exempt from short-sale rules.
SSHO	Sell Short	Order to sell a financial instrument that the seller does not own; a sale effected by delivering a financial instrument borrowed by or for the account of the seller.

Codes

In option F, if Qualifier is TILI and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

CLOS	At the Closing	Order to be executed at or around the closing price.
FAKI	Fill and Kill	Order to be executed as much as possible. Non-executed parts of a FAK are deleted.
FIKI	Fill or Kill	Market or limit order that is to be executed in its entirety as soon as it is submitted; if not so executed, the order is to be cancelled.
GDAY	Good for the Day	Order that, if not executed, expires at the end of the trading day on which the order is entered.
GTCA	Good until Cancelled	Order that remains in effect until it is either executed or cancelled.
GTMO	Good for the Month	Order that, if not executed, expires at the end of the month on which the order is entered.
GTXO	Good till Crossed	Order that remains in effect until crossed.
IOCA	Immediate or Cancel	Market or limit order to be executed in whole or in part as soon as it is submitted; any portion not so executed is to be cancelled.

OPEN	At the Opening	Market or limit order to be executed at the opening of the stock exchange or not at all; all or part of any order not executed at the opening is treated as cancelled.

Codes

In option H, if Qualifier is PAYM, Indicator must contain one of the following codes (Error code(s): K22):

APMT	Against Payment	Against payment.
FREE	Free	Free.

Codes

In option F, if Qualifier is CATB and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

FLAT	Charges/Tax Basis Flat or Absolute	Charges/tax basis is flat or absolute for the trade being allocated.
PERU	Charges/Tax Basis per Unit	Charge/tax basis is per unit of financial instrument.

Codes

In option F, if Qualifier is TRCN and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

SOLI	Solicited	Trade was solicited by the executing broker. The broker has suggested to his client to buy/sell financial instruments.
USOL	Unsolicited	Trade was unsolicited. The client acts on its own without advice from the executing broker.

Codes

In option F, if Qualifier is TRSE and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

AUCT	Auctions	Orders that are traded in regularly occurring auctions: orders are accumulated and executed on the basis of defined algorithms.
CONT	Continuous	Orders that are executed directly against each other as they hit the marketplace.

Codes

If Qualifier is PRIR and Data Source Scheme is not present, Indicator must contain a numerical value in the range 0001 - 9999 where 0001 refers to the highest priority (Error code(s): K22).

Usage Rules

Qualifier TOOR codes BCSE, BCSH and BMIN are only to be used for orders to buy.

Qualifier TOOR codes SLOS, SPLU, SSEX and SSHO are only to be used for orders to sell.

Definition

This qualified generic field specifies:

INCA	Investor Capacity Indicator	Role of the investor in the transaction.
TRCA	Party Capacity Indicator	Specifies the role of the party in the transaction.

Codes

If Qualifier is TRCA and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

AGEN	Trading as Agent	Party is trading on behalf of his client.
BAGN	Acting as Agent for Customer and Other Person	Party is acting as an agent for both customer and another person.
CAGN	Crossing as Agent	Party is crossing on behalf of his client.
CPRN	Crossing as Principal	Party is crossing for his own account.
INFI	Investment Firm	Any legal person whose regular occupation or business is the provision of one or more investment services to third parties and/or the performance of one or more investment activities on a professional basis.
MKTM	Market Maker	Dealer or specialist that is trading for their own account in the OTC market. Market makers are expected to maintain an orderly market by being available to buy or sell.
MLTF	Multi-Lateral Trading Facility	Multilateral trading facility (MTF) is a multilateral system which brings together multiple third-party buying and selling interests in financial instruments in a way that results in a contract.
OAGN	Acting as Agent for Person Other than Customer	Party is acting as an agent for a person other than a customer.
PRAG	Acting as Agent for Some Executions and Principal	Party is acting as an agent for some executions and principal for others.

PRIN	Trading as Principal	Party is trading for his own account.
RISP	Acting as Riskless Principal	Party is trading as a riskless principal, that is, the order to buy (sell) has been simultaneously offset by an order to sell (buy) with another party.
RMKT	Regulated Market	A regulated market is a market on which financial instruments can be traded according to rules defined by the stock exchange.
SINT	Systematic Internaliser	Firms which, on an organised, frequent and systematic basis, deal on their own account by executing client orders outside a regulated market or an MTF. SIs have the obligation to provide, and make public, a definite bid and offer quote for liquid securities.
TAGT	Transfer Agent	The party appointed by the Fund Management Company. It updates records of investor accounts to reflect the daily investor purchases, redemptions, switches, transfers, and re-registrations. It ensures the timely settlement of transactions, and may provide tax information to the investor and/or to its intermediaries. It may calculate, collect, and rebate commissions. It prepares and distributes confirmations reflecting transactions, resulting in unit or cash account movements to the investor or the investor's intermediary. It responds to inquiries concerning account status, and processes the income distribution.

Codes

If Qualifier is INCA and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

ELIG	Eligible Counterparty	MiFID classification of counterparty. Eligible customers are the most sophisticated level of investor, able to opt out of some of the protections afforded by conduct of business rules defined under MiFID.
PROF	Professional Client	MiFID classification of counterparty. Professional customers are, for example, investment firms, credit institutions, insurance companies.
RETL	Retail Client	MiFID classification of counterparty. Retail customers are the least sophisticated level of investor.

Usage Rules

For Qualifier INCA, the use of the codes needs to be bilaterally agreed.

MT 513 - 44. Field 16S: End of Block

Format

Option S 16c

Presence

Mandatory in mandatory subsequence C2

Codes

In option D, Quantity Type Code must contain the following code (Error code(s): K36):

DITU	Digital Token Unit Number	Quantity of digital token expressed as a number, for example, a number of blockchain tokens.
------	---------------------------	--

Network Validated Rules

The integer part of Quantity must contain at least one digit. A decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).

Usage Rules

Format option D may only be used when the related account information in subsequence C2 field : 97D::BCAW is present.

MT 513 - 46. Field 35B: Identification of the Financial Instrument

Format

Option B	[ISIN!e12!c] [4*35x]	(Identification of Security) (Description of Security)
----------	-------------------------	---

Presence

Mandatory in mandatory sequence C

Definition

This field identifies the financial instrument.

Network Validated Rules

At least Identification of a Security (Subfield 1) or Description of Security (Subfield 2) must be present; both may be present (Error code(s): T17).

ISIN is used at the beginning of Identification of Security (Subfield 1) and must be composed of uppercase letters only (Error code(s): T12).

Usage Rules

When used in Description of Security (Subfield 2), codes must start and end with a slash '/'.

When an ISIN identifier is not used it is strongly recommended that one of the following codes be used as the first characters of the Description of Security (Subfield 2):

[/2!a/]	The ISO two-digit country code, followed by the national scheme number.
[/TS/]	Followed by the ticker symbol.
[/XX/]	Bilaterally agreed or proprietary scheme which may be further identified by a code or short description identifying the scheme used.
[/4!c/]	Code identifying the type of security identifier used. This code must be one published by ISO 20022 (ExternalFinancialInstrumentIdentificationTypeCode).

It is strongly recommended that the ISIN be used.

MT 513 - 47. Field 16R: Start of Block

Format

Option R 16c

Presence

Mandatory in optional subsequence C3

Definition

This field specifies the start of a block and the name of that block.

Codes

This field must contain the following code (Error code(s): T92):

FIA Financial Instrument Attributes

MT 513 - 48. Field 94B: Place: Place of Listing

Format

Option B :4!c/[8c]/4!c[/30x] (Qualifier) (Data Source Scheme) (Place Code) (Narrative)

Presence

Optional in optional subsequence C3

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	PLIS	N		B	Place of Listing

Definition

This qualified generic field specifies:

PLIS Place of Listing Place where the referenced financial instrument is listed.

Codes

If Data Source Scheme is not present, Place Code must contain one of the following codes (Error code(s): K94):

EXCH Stock Exchange Place of listing is a stock exchange.

OTCO Over The Counter Place of listing is over the counter.

Network Validated Rules

Narrative must not start or end with a slash '/' and must not contain two consecutive slashes '/' (Error code(s): T26).

Usage Rules

Place of Listing is to be identified by its Market Identifier Code (MIC).

Example

:94B::PLIS//EXCH/XNYS

MT 513 - 49. Field 22F: Indicator

Format

Option F :4!c/[8c]/4!c (Qualifier) (Data Source Scheme) (Indicator)

Presence

Optional in optional subsequence C3

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	MICO	N		F	Method of Interest Computation Indicator
2	O	FORM	N		F	Form of Securities Indicator
3	O	PFRE	N		F	Payment Frequency Indicator
4	O	PAYS	N		F	Payment Status Indicator
5	O	CFRE	N		F	Variable Rate Change Frequency Indicator

Definition

This qualified generic field specifies:

CFRE	Variable Rate Change Frequency Indicator	Specifies the frequency of change to the variable rate of an interest bearing instrument.
FORM	Form of Securities Indicator	Specifies the form of the financial instrument.
MICO	Method of Interest Computation Indicator	Specifies the computation method of (accrued) interest of the financial instrument.
PAYS	Payment Status Indicator	Specifies the status of the payment of a financial instrument at a particular time, as agreed with the issuer.

PFRE	Payment Frequency Indicator	Specifies the frequency of a payment.
------	-----------------------------------	---------------------------------------

Codes

If Qualifier is MICO and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

A001	30/360 (ISDA) or 30/360 (American Basic Rule)	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February, and provided that the interest period started on a 30th or a 31st. This means that a 31st is assumed to be a 30th if the period started on a 30th or a 31st and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). It is the most commonly used 30/360 method for US straight and convertible bonds.
A002	30/365	Method whereby interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and a 365-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th).
A003	30/Actual	Method whereby interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and the assumed number of days in a year in a way similar to the Actual/Actual (ICMA). Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). The assumed number of days in a year is computed as the actual number of days in the coupon period multiplied by the number of interest payments in the year.
A004	Actual/360	Method whereby interest is calculated based on the actual number of accrued days in the interest period and a 360-day year.
A005	Actual/365 (Fixed)	Method whereby interest is calculated based on the actual number of accrued days in the interest period and a 365-day year.
A006	Actual/Actual (ICMA)	Method whereby interest is calculated based on the actual number of accrued days and the assumed number of days in a year, that is, the actual number of days in the coupon period multiplied by the number of interest payments in the year. If the coupon period is irregular (first or last coupon), it is extended or split into quasi interest periods that have the length of a regular coupon period and the computation is operated separately on each quasi interest period and the intermediate results are summed up.

A007	30E/360 or Eurobond basis	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be equivalent to a 30 Feb. However, if the last day of the maturity coupon period is the last day of February, it will not be assumed to be a 30th. It is a variation of the 30/360 (ICMA) method commonly used for eurobonds. The usage of this variation is only relevant when the coupon periods are scheduled to end on the last day of the month.
A008	Actual/Actual (ISDA)	Method whereby interest is calculated based on the actual number of accrued days of the interest period that fall on a normal year, divided by 365, added to the actual number of days of the interest period that fall on a leap year, divided by 366.
A009	Actual/365L or Actual/Actual (basic rule)	Method whereby interest is calculated based on the actual number of accrued days and a 365-day year (if the coupon payment date is NOT in a leap year) or a 366-day year (if the coupon payment date is in a leap year).
A010	Actual/Actual (AFB)	Method whereby interest is calculated based on the actual number of accrued days and a 366-day year (if 29 Feb falls in the coupon period) or a 365-day year (if 29 Feb does not fall in the coupon period). If a coupon period is longer than one year, it is split by repetitively separating full year sub-periods counting backwards from the end of the coupon period (a year backwards from a 28 Feb being 29 Feb, if it exists). The first of the sub-periods starts on the start date of the accrued interest period and thus is possibly shorter than a year. Then the interest computation is operated separately on each sub-period and the intermediate results are summed up.
A011	30/360 (ICMA) or 30/360 (basic rule)	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). It is the most commonly used 30/360 method for non-US straight and convertible bonds issued before 01/01/1999.
A012	30E2/360 or Eurobond basis model 2	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for the last day of February whose day of the month value shall be adapted to the value of the first day of the interest period if the latter is higher and if the period is one of a regular schedule. This means that a 31st is assumed to be a 30th and the 28th Feb of a non-leap year is assumed to be equivalent to a 29th Feb when the first day of the interest period is a 29th, or to a 30th Feb when the first day of the interest period is a 30th or a 31st. The 29th Feb of a leap year is assumed to be equivalent to a 30th Feb when the first day of the interest period is a 30th or a 31st. Similarly, if the coupon period starts on the last day of February, it is assumed to produce only one day of interest in February as if it was starting on a 30th Feb when the end of the period is a 30th or a 31st, or two days of interest in February when the end of the period is a 29th, or 3 days of interest in February when it is the 28th Feb of a non-leap year and the end of the period is before the 29th.

A013	30E3/360 or Eurobond basis model 3	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be equivalent to a 30 Feb. It is a variation of the 30E/360 (or Eurobond basis) method where the last day of February is always assumed to be a 30th, even if it is the last day of the maturity coupon period.
A014	Actual/365NL or Actual/365 No Leap	Method whereby interest is calculated based on the actual number of accrued days in the interest period, excluding any leap day from the count, and a 365-day year.
OTHR	Other	Other method than A001-A014. See Narrative.

Codes

If Qualifier is FORM and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

BEAR	Bearer Security	Financial instruments are in bearer form.
REGD	Registered Security	Financial instruments are in registered form.

Codes

If Qualifier is PFRE and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

ANNU	Annual	Payment frequency is annual.
MNTH	Monthly	Payment frequency is monthly.
QUTR	Quarterly	Payment frequency is quarterly.
SEMI	Semi-Annual	Payment frequency is semi-annual.
WEEK	Weekly	Payment frequency is weekly.

Codes

If Qualifier is PAYS and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

FULL	Fully Paid	Financial instrument is fully paid.
NILL	Nil Paid	Financial instrument is nil paid.
PART	Partially Paid	Financial instrument is partially paid.

Codes

If Qualifier is CFRE and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

ANNU	Annual	Frequency is annual.
MNTH	Monthly	Frequency is monthly.
QUTR	Quarterly	Frequency is quarterly.
SEMI	Semi-Annual	Frequency is semi-annual.
WEEK	Weekly	Frequency is weekly.

MT 513 - 50. Field 12a: Type of Financial Instrument

Format

Option A	:4!c/[8c]/30x	(Qualifier) (Data Source Scheme) (Instrument Code or Description)
Option B	:4!c/[8c]/4!c	(Qualifier) (Data Source Scheme) (Instrument Type Code)
Option C	:4!c//6!c	(Qualifier) (CFI Code)

Presence

Optional in optional subsequence C3

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	CLAS	N		A or C	Classification Type
2	O	OPST	N		B	Option Style
3	O	OPTI	N		B	Option Type

Definition

This qualified generic field specifies:

CLAS	Classification Type	Classification type of the financial instrument, for example, ISO Classification of Financial instrument (CFI).
OPST	Option Style	Specifies how an option can be exercised.
OPTI	Option Type	Specifies whether it is a call option or a put option.

Codes

In option B, if Qualifier is OPST and Data Source Scheme is not present, Instrument Type Code must contain one of the following codes (Error code(s): K12):

AMER	American Style	Option can be exercised before or on expiry date.
EURO	European Style	Option can be exercised on expiry date only.

Codes

In option B, if Qualifier is OPTI and Data Source Scheme is not present, Instrument Type Code must contain one of the following codes (Error code(s): K12):

CALL	Call Option	A right to buy a defined quantity of an asset by a certain date at an agreed price.
PUTO	Put Option	A right to sell a defined quantity of an asset by a certain date at an agreed price.

Usage Rules

When option C is used, CFI Code must be a valid ISO CFI code.

To use the codes associated with the ISITC code for security type, /ASCT/, Data Source Scheme must be ISIT, and Instrument Code or Description must contain a valid ISITC security type code.

Example

:12C::CLAS//ESVUFR

(CFI code for equity, common share, voting rights, unrestricted, fully paid and registered).

9	O	DDTE	N		A	Dated Date
10	O	FCOU	N		A	First Coupon Date
11	O	NWFC	N		A	Next Factor Date

Definition

This qualified generic field specifies:

- CALD Call Date Date on which a financial instrument is called away/redeemed before its scheduled maturity date.
- CONV Conversion Date Deadline by which a convertible security must be converted, according to the terms of the issue.
- COUP Coupon Date Next payment date of an interest bearing financial instrument.

DDTE	Dated Date	Date on which an interest bearing financial instrument begins to accrue interest.
EXPI	Expiry Date	Date on which an order expires or on which a privilege or offer terminates.
FCOU	First Coupon Date	First payment date of an interest bearing financial instrument.
FRNR	Floating Rate Note Reset Date	Date on which the interest rate of an interest bearing financial instrument will be/was calculated and reset, according to the terms of the issue.
ISSU	Issue Date	Date on which the financial instrument is issued.
MATU	Maturity Date	Date on which a financial instrument becomes due and assets are to be repaid.
NWFC	Next Factor Date	Date on which the current factor will be changed to the next factor.
PUTT	Put Date	Date on which a holder of a financial instrument has the right to request redemption of the principal amount prior to its scheduled maturity date.

Network Validated Rules

Date must be a valid date expressed as YYYYMMDD (Error code(s): T50).

6	O	INDX	N		A	Index Factor

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
7	O	YTMR	N		A	Yield To Maturity Rate

Definition

This qualified generic field specifies:

CUFC	Current Factor	Rate expressed as a decimal between 0 and 1 defining the outstanding principal of the financial instrument (for factored securities).
INDX	Index Factor	Public index rate used for inflation adjustment.
INTR	Interest Rate	Annualised interest rate of a financial instrument used to calculate the actual interest rate of the coupon or the accrued interest.
NWFC	Next Factor	Rate expressed as a decimal between 0 and 1 that will be applicable as of the next factor date and defines the outstanding principal of the financial instrument (for factored securities).
NXRT	Next Interest Rate	Interest rate applicable to the next interest payment period in relation to variable rate instruments.
PRFC	Previous Factor	Rate expressed as a decimal between 0 and 1 that was applicable before the current factor and defines the outstanding principal of the financial instrument (for factored securities).
YTMR	Yield To Maturity Rate	Rate of return anticipated on a bond when held until maturity date.

Network Validated Rules

The integer part of Rate must contain at least one digit. A decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).

If Rate is zero, Sign must not be present (Error code(s): T14).

Usage Rules

Sign must be present when Rate is negative.

Except if notified differently in the rate definition, when used with format option A (:4!c/[N]15d), the rate must be expressed as a percentage, not as a decimal fraction (12% must be identified by 12, and not 0,12).

3	O	LOTS	N		B	Lot Number
4	O	VERN	N		A or B	Version Number

Definition

This qualified generic field specifies:

COUP	Coupon Number	Number of the next coupon attached/associated with a security.
LOTS	Lot Number	Number identifying a lot constituting the financial instrument.
POOL	Pool Number	Number identifying a group of underlying assets assigned by the issuer of a factored security.
VERN	Version Number	Version number of the option contract or tranche of the related financial instrument.

Network Validated Rules

Number (Format Option B) must not start or end with a slash '/' and must not contain two consecutive slashes '/' (Error code(s): T26).

MT 513 - 55. Field 17B: Flag

Format

Option B :4!c//1!a (Qualifier) (Flag)

5	O	PUTT	N		B	Puttable Flag
6	O	WRTS	N		B	Warrants Attached on Delivery Flag
7	O	ODDC	N		B	Odd Coupon Flag

Definition

This qualified generic field specifies:

CALL	Callable Flag	Indicates whether the issuer has the right to repay the financial instrument prior to maturity.
CONV	Convertible Flag	Indicates whether the financial instrument is convertible into another type of financial instrument.
COVE	Covered Flag	Indicates whether the underlying financial instrument of an option is owned by the writer of the option.
FRNF	Floating Rate Note Flag	Indicates whether the interest rate of an interest bearing instrument is reset periodically.
ODDC	Odd Coupon Flag	Indicates whether the payment of the coupon (interest) on an interest bearing instrument is off the normal schedule.
PUTT	Puttable Flag	Indicates whether the holder has the right to ask for redemption of the financial instrument prior to final maturity.
WRTS	Warrants Attached on Delivery Flag	Indicates whether the warrants on a financial instrument (which has been traded cum warrants) will be attached on delivery.

Codes

Flag must contain one of the following codes (Error code(s): K17):

N	No	No.
Y	Yes	Yes.

MT 513 - 56. Field 90a: Price

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	INDC	N		A or B	Indicative Price
	or	MRKT	N		A or B	Market Price
2	O	EXER	N		A or B	Exercise Price

Definition

This qualified generic field specifies:

EXER	Exercise Price	<ol style="list-style-type: none"> Price at which the security will be purchased/sold if warrant is exercised, represented either as an actual amount (option B) or a percentage (option A). Price at which a bond is converted, represented either as an actual amount (option B) or a percentage (option A). Strike price of an option, represented either as an actual amount (option B) or a percentage (option A).
INDC	Indicative Price	Estimated price, for example, for valuation purposes.
MRKT	Market Price	Last reported/known price of a financial instrument in a market.

Codes

In option A, Percentage Type Code must contain one of the following codes (Error code(s): K90):

DISC	Discount	Price expressed as the number of percentage points below par, for example, a discount price of 2.0% equals a price of 98 when par is 100.
PRCT	Percentage	Price expressed as a percentage of par.
PREM	Premium	Price expressed as the number of percentage points above par, for example, a premium price of 2.0% equals a price of 102 when par is 100.
YIEL	Yield	Price expressed as a yield.

Codes

In option B, Amount Type Code must contain one of the following codes (Error code(s): K90):

ACTU	Actual Amount	Price expressed as an amount of currency per unit or per share.
DISC	Discount	Price expressed as a discount amount.
PREM	Premium	Price expressed as a premium.

Network Validated Rules

- Currency Code must be a valid ISO 4217 currency code (Error code(s): T52).
- The integer part of Price must contain at least one digit. A decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).
- Sign may only be present if Percentage Type Code is YIEL (Error code(s): T69).
- If Price is zero, Sign must not be present (Error code(s): T14).

Usage Rules

- The number of decimal digits in Price is not validated against the currency specified.
- Sign must be present when Price is negative.

MT 513 - 57. Field 36a: Quantity of Financial Instrument

Format

Option B	:4!c//4!c/15d	(Qualifier) (Quantity Type Code) (Quantity)
Option D	:4!c//4!c/30d	(Qualifier) (Quantity Type Code) (Quantity of Digital Tokens)

Presence

Optional in optional subsequence C3

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	MINO	N		B or D	Minimum Nominal Quantity
2	O	SIZE	N		B or D	Contract Size
3	O	ORGV	N		B or D	Original Face Amount

Definition

This qualified generic field specifies:

MINO	Minimum Nominal Quantity	Minimum nominal quantity of financial instrument.
------	--------------------------	---

ORGV	Original Face Amount	Original par or nominal value of a financial instrument.
SIZE	Contract Size	Ratio or multiplying factor used to convert one contract into a financial instrument quantity.

Codes

In option B, if Qualifier is MINO or Qualifier is SIZE, Quantity Type Code must contain one of the following codes (Error code(s): K36):

AMOR	Amortised Value	Quantity expressed as an amount representing the current amortised face amount of a bond, for example, a periodic reduction/increase of a bond's principal amount.
FAMT	Face Amount	Quantity expressed as an amount representing the face amount, that is, the principal, of a debt instrument.
UNIT	Unit Number	Quantity expressed as a number, for example, a number of shares.

Codes

In option D, Quantity Type Code must contain the following code (Error code(s): K36):

DITU	Digital Token Unit Number	Quantity of digital token expressed as a number, for example, a number of blockchain tokens.
------	---------------------------	--

Codes

In option B, if Qualifier is ORGV, Quantity Type Code must contain the following code (Error code(s): K36):

FAMT	Face Amount	Quantity expressed as an amount representing the face amount, that is, the principal, of a debt instrument.
------	-------------	---

Network Validated Rules

The integer part of Quantity must contain at least one digit. A decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).

Usage Rules

Format option D may only be used when the related account information in subsequence C2 field : 97D::BCAW is present.

MT 513 - 58. Field 35B: Identification of the Financial Instrument

Format

Option B	[ISIN!e12!c] [4*35x]	(Identification of Security) (Description of Security)
----------	-------------------------	---

Presence

Optional in optional subsequence C3

Definition

This field identifies the underlying financial instrument.

Network Validated Rules

At least Identification of a Security (Subfield 1) or Description of Security (Subfield 2) must be present; both may be present (Error code(s): T17).

ISIN is used at the beginning of Identification of Security (Subfield 1) and must be composed of uppercase letters only (Error code(s): T12).

Usage Rules

The financial Instrument field 35B in the Financial Instrument Attributes subsequence must only be used for the identification of the underlying instrument(s) of a derivative. It must not be used, for example, for the listing of the underlying securities of an index.

When used in Description of Security (Subfield 2), codes must start and end with a slash '/'.

When an ISIN identifier is not used it is strongly recommended that one of the following codes be used as the first characters of the Description of Security (Subfield 2):

[/2!a/]	The ISO two-digit country code, followed by the national scheme number.
[/TS/]	Followed by the ticker symbol.
[/XX/]	Bilaterally agreed or proprietary scheme which may be further identified by a code or short description identifying the scheme used.
[/4!c/]	Code identifying the type of security identifier used. This code must be one published by ISO 20022 (ExternalFinancialInstrumentIdentificationTypeCode).

It is strongly recommended that the ISIN be used.

Example

An ISIN will be identified as follows:

```
:35B:ISIN US0123456704
```

A SEDOL will be identified as follows:

```
:35B:/GB/0123456
```

A CUSIP will be identified as follows:

```
:35B:/US/012345670
```

A proprietary scheme will be identified as follows:

```
:35B:/XX/SCHEMEUSED 0123456700
```

10	O	LEOG	N		F	Letter of Guarantee Indicator
11	O	SETS	N		F	Settlement System/Method Indicator
12	O	REPT	N		F	Repurchase Type Indicator

Definition

This qualified generic field specifies:

BENE	Beneficial Ownership Indicator	Specifies whether there is change of beneficial ownership.
CASY	Cash Settlement System Indicator	Specifies what cash settlement system is instructed to be used.
DBNM	Settlement Standing Instruction Database Indicator	Specifies what settlement standing instruction database is to be used to derive the settlement parties involved in the transaction.
LEOG	Letter of Guarantee Indicator	Specifies whether physical settlement may be executed using a letter of guarantee or if the physical certificates should be used.
REGT	Registration Indicator	Specifies whether registration should occur upon receipt.
REPT	Repurchase Type Indicator	Specifies the type of repurchase transaction.
REST	Restrictions Indicator	Specifies the regulatory restrictions applicable to a financial instrument.

RTGS	Securities Real-Time Gross Settlement Indicator	Specifies whether the settlement transaction is to be settled through an RTGS or a non RTGS system.
SETR	Type of Settlement Transaction Indicator	Specifies underlying information regarding the type of settlement transaction.
SETS	Settlement System/ Method Indicator	Specifies whether the settlement instruction is to be settled through the default or the alternate settlement system.
STAM	Stamp Duty Indicator	Specifies the stamp duty type or exemption reason applicable to the settlement instruction.
STCO	Settlement Transaction Condition Indicator	Specifies the conditions under which the order/trade is to be settled.

Codes

If Qualifier is SETR and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

BSBK	Buy Sell Back	Relates to a buy sell back transaction.
COLI	Collateral In	Relates to a collateral transaction, from the point of view of the collateral taker or its agent.
COLO	Collateral Out	Relates to a collateral transaction, from the point of view of the collateral giver or its agent.
CONV	DR Conversion	Relates to a depository receipt conversion.
ETFT	Exchange Traded Funds	Relates to an exchange traded fund (ETF) creation or redemption.
FCTA	Factor Update	Relates to a factor update.
INSP	In Speci/Share Exchange	Relates to a movement of shares into or out of a pooled account.
ISSU	Issuance	Relates to the issuance of a security such as an equity or a depository receipt.
MKDW	Mark-Down	Relates to the decrease of positions held by an ICSD at the common depository due to custody operations (repurchase, pre-release, proceed of corp. event realigned).
MKUP	Mark-Up	Relates to the increase of positions held by an ICSD at the common depository due to custody operations (repurchase, pre-release, proceed of corporate event realigned).
NETT	Netting	Relates to the netting of settlement instructions.

NSYN	Non Syndicated	Relates to the issue of medium and short term paper (CP, CD, MTN, notes ...) under a program and without syndication arrangement.
OWNE	External Account Transfer	Relates to an account transfer involving more than one instructing party (messages sender) and/or account servicer (messages receiver).
OWNI	Internal Account Transfer	Relates to an account transfer involving one instructing party (messages sender) at one account servicer (messages receiver).
PAIR	Pair-Off	Relates to a pair-off: the transaction is paired off and netted against one or more previous transactions.
PLAC	Placement	Relates to the placement/new issue of a financial instrument.
PORT	Portfolio Move	Relates to a portfolio move from one investment manager to another and/or from an account servicer to another. It is generally charged differently than another account transfer (OWNE, OWNI, INSP), hence the need to identify this type of transfer as such.
REAL	Realignment	Relates to a realignment of positions.
REDI	Withdrawal	Relates to the withdrawal of specified amounts from specified sub-accounts.
REDM	Redemption (Funds)	Relates to a redemption of Funds (Funds Industry ONLY).
RELE	DR Release/ Cancellation	Relates to a release (into/from local) of Depository Receipt operation.
REPU	Repo	Relates to a repurchase agreement transaction.
RODE	Return of Delivery Without Matching	Relates to the return of financial instruments resulting from a rejected delivery without matching operation.
RVPO	Reverse Repo	Relates to a reverse repurchase agreement transaction.
SBBK	Sell Buy Back	Relates to a sell buy back transaction.
SECB	Securities Borrowing	Relates to a securities borrowing operation.
SECL	Securities Lending	Relates to a securities lending operation.
SUBS	Subscription (Funds)	Relates to a subscription to funds (Funds Industry ONLY).
SYND	Syndicated	Relates to the issue of financial instruments through a syndicate of underwriters and a Lead Manager.
TBAC	TBA Closing	Relates to a To Be Announced (TBA) closing trade.
TRAD	Trade	Relates to the settlement of a trade.
TRPO	Triparty Repo	Relates to a triparty repurchase agreement.

TRVO	Triparty Reverse Repo	Relates to a triparty reverse repurchase agreement.
TURN	Turnaround	Relates to a turnaround: the same security is bought and sold to settle the same day, to or from different brokers.

Codes

If Qualifier is STCO and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

ASGN	Assignment	Transfer of ownership of the asset to another party during the closing of an option.
CLEN	Clean	Tax-exempt financial instruments are to be settled.
DIRT	Dirty	Taxable financial instruments are to be settled.
DLWM	Delivery Without Matching	Matching receipt instruction not required (only for concerned ICSD and CSD).
DRAW	Drawn	Settlement transactions relates to drawn securities.
EXER	Exercised	Settlement transaction relates to options, futures or derivatives that are exercised.
FRCL	Free Clean Settlement	Delivery will be made free of payment but a clean payment order will be sent.
IAAB	Instruct Account Balance	Indicates whether the available balance in the cash account is to be utilised for the transaction.
KNOC	Knocked Out	Settlement transaction relates to options, futures or derivatives that are expired worthless.
NPAR	No Partial Settlement Allowed	Partial settlement is not allowed.
PART	Partial Settlement Allowed	Partial settlement is allowed.
PHYS	Physical	Securities are to be physically settled.
RESI	CSD Payment Only	Relates to transaction on a security that is not eligible at the Central Securities Depository (CSD) but for which the payment will be enacted by the CSD.
RPTO	Reporting	Relates to a transaction that is for reporting purposes only.
SPDL	Special Delivery	Settlement transactions to be settled with special delivery.
SPST	Split Settlement	Money and financial instruments settle in different locations.
UNEX	Unexposed	Delivery cannot be performed until money is received.

Codes

If Qualifier is RTGS and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

NRTG	Non-RTGS	Settle through the non-RTGS system. If there is a standing instruction in place for settlement through the RTGS instruction, then this standing instruction is to be ignored.
YRTG	RTGS	Settle through the RTGS system. If there is a standing instruction in place for settlement through the non-RTGS system, then this standing instruction is to be ignored.

Codes

If Qualifier is REGT and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

NREG	Street Name	Hold the securities in street name. If there is a standing instruction in place to register on receipt, then this standing instruction is to be ignored.
YREG	Register	Register on receipt. If there is a standing instruction in place to hold the securities in street name, then this standing instruction is to be ignored.

CHEC	Cheque	Settle money through cheque.
GBSC	UK Domestic	Settle money through UK domestic.
GROS	Gross Settlement System	Settle money through gross settlement system.
NETS	Net Settlement System	Settle money through net settlement system.

USCH	CHIPS (US)	Settle money through CHIPS (US).
USFW	Fedwire (US)	Settle money through Fedwire (US).

Codes

If Qualifier is DBNM and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

BRKR	Broker	Settlement standing instruction database to be used is the broker's database.
INTE	Internal	Settlement standing instruction database to be used is the receiver's internal database.
VEND	Vendor	Settlement standing instruction database to be used is the database of the vendor.

Codes

If Qualifier is REST and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

144A	Pursuant to 144A	Ownership or transfer of an unregistered security issued, pursuant to US legal restrictions 144A.
NRST	Not Subject to Restrictions	Ownership or transfer of a security that is not subject to restrictions.
RSTR	Subject to Restrictions (not pursuant to 144A)	Ownership or transfer of a security that is subject to restrictions, and not pursuant to 144A.

Codes

If Qualifier is LEOG and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

NLEG	Letter of Guarantee Not Accepted	Letter of guarantee is not accepted. If there is a standing instruction in place to accept a letter of guarantee, then this standing instruction is to be ignored.
YLEG	Letter of Guarantee Accepted	Letter of guarantee is accepted. If there is a standing instruction in place not to accept a letter of guarantee, then this standing instruction is to be ignored.

Codes

If Qualifier is SETS and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

NSET	Default Settlement System/Method	Settle through the default settlement system/method. If there is a standing instruction in place for settlement through the alternate settlement system/method, then this standing instruction is to be ignored.
YSET	Alternate Settlement System/Method	Settle through the alternate settlement system/method. If there is a standing instruction in place for settlement through the default settlement system/method, then this standing instruction is to be ignored.

Codes

If Qualifier is REPT and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

CADJ	Swap/Substitution	Relates to a repo collateral substitution.
CALL	Repo Call	Relates to the early closing/maturity date for a term repo or the termination date of an open repo with underlying collateral.
PAIR	Pair-Off	Relates to a repo that is part of a pair-off.
RATE	Repo Rate	Relates to a change in the repo rate.
ROLP	Repo Contract Rollover	Relates to a repo rollover of a contract extending the closing or maturity date without impacting underlying collateral.
TOPU	Top-Up	Relates to a cover of securities position due to deficit of collateral following mark to market valuation.
WTHD	Withdrawal	Relates to a return of securities position due to excess of collateral following mark to market valuation.

Codes

If Qualifier is STAM, the Data Source Scheme must be used to indicate the stamp duty type or exemption reason, for example, in the United Kingdom and Ireland (CRST), in South Africa (STRA), etc.

Usage Rules

The conditions of the use of the codes for the qualifiers BENE, CASY, DBNM, LEOG, REGT, REPT, RTGS, SETS and STCO must be pre-agreed between account owner and account servicer.

When the code YREG in the registration indicator is present, additional registration details must be specified in the registration details narrative in the Settlement Parties sequence unless already available at the account servicer via standing instruction/SLA.

The cash settlement system codes are to be used only by agents directly involved in the settlement process, such as local settlement agents, CSD's and central banks.

The use of settlement transaction type codes CONV, ISSU, REAL, RELE, NETT, NSYN, MKUP, MKDW, SYND is governed by the existence of a bilateral agreement.

1	O	BCAW	N	C8	D	Blockchain Address or Wallet
	or	SAFE	N	C8	A or B	Safekeeping Account
2	O	CASH	N	C8	A or E	Cash Account

Definition

This qualified generic field specifies:

BCAW	Blockchain Address or Wallet	Blockchain address or wallet where digital assets are maintained. This is the equivalent of safekeeping account for digital assets.
CASH	Cash Account	Account in which cash is maintained.
SAFE	Safekeeping Account	Account where financial instruments are maintained.

Codes

In option B, if Qualifier is SAFE and Data Source Scheme is not present, Account Type Code must contain one of the following codes (Error code(s): K97):

ABRD	Abroad	Financial instruments are held in a safekeeping account abroad.
CEND	Centralised	Financial instrument in the safekeeping account are held in one location.
DVPA	Cash/DVP	Safekeeping account is used for settlement on delivery or collect on delivery basis.
FUNG	Fungible	Financial instruments in the safekeeping account are fungible.
MARG	Margin	Account is used when financing is by the broker/dealer.
NFUN	Non-Fungible	Financial instruments in the safekeeping account are not fungible.
PHYS	Physical	Financial instruments in the safekeeping account are in physical form.
SHOR	Short Sale	Account is used for short sale orders.

Usage Rules

The account provided is the account of the party specified in this sequence.

2	O	MICO	N		F	Method of Interest Computation Indicator
3	O	REVA	N		F	Revaluation Indicator
4	O	LEGA	N		F	Legal Framework Indicator

Definition

This qualified generic field specifies:

LEGA	Legal Framework Indicator	Legal framework of the transaction.
MICO	Method of Interest Computation Indicator	Specifies the computation method of (accrued) interest of the financial instrument.
RERT	Rate Type	Specifies whether the rate is fixed or variable.
REVA	Revaluation Indicator	Specifies whether the collateral position should be subject to automatic revaluation by the account servicer.

Codes

If Qualifier is RERT and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

FIXE	Fixed	Rate is fixed.
FORF	Forfeit	No specific rate applies to the transaction, only a forfeit.
VARI	Variable	Rate is variable.

Codes

If Qualifier is MICO and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

A001	30/360 (ISDA) or 30/360 (American Basic Rule)	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February, and provided that the interest period started on a 30th or a 31st. This means that a 31st is assumed to be a 30th if the period started on a 30th or a 31st and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). It is the most commonly used 30/360 method for US straight and convertible bonds.
A002	30/365	Method whereby interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and a 365-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th).
A003	30/Actual	Method whereby interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and the assumed number of days in a year in a way similar to the Actual/Actual (ICMA). Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). The assumed number of days in a year is computed as the actual number of days in the coupon period multiplied by the number of interest payments in the year.
A004	Actual/360	Method whereby interest is calculated based on the actual number of accrued days in the interest period and a 360-day year.
A005	Actual/365 (Fixed)	Method whereby interest is calculated based on the actual number of accrued days in the interest period and a 365-day year.
A006	Actual/Actual (ICMA)	Method whereby interest is calculated based on the actual number of accrued days and the assumed number of days in a year, that is, the actual number of days in the coupon period multiplied by the number of interest payments in the year. If the coupon period is irregular (first or last coupon), it is extended or split into quasi interest periods that have the length of a regular coupon period and the computation is operated separately on each quasi interest period and the intermediate results are summed up.
A007	30E/360 or Eurobond basis	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be equivalent to a 30 Feb. However, if the last day of the maturity coupon period is the last day of February, it will not be assumed to be a 30th. It is a variation of the 30/360 (ICMA) method commonly used for eurobonds. The usage of this variation is only relevant when the coupon periods are scheduled to end on the last day of the month.
A008	Actual/Actual (ISDA)	Method whereby interest is calculated based on the actual number of accrued days of the interest period that fall on a normal year, divided by 365, added to the actual number of days of the interest period that fall on a leap year, divided by 366.

A009	Actual/365L or Actual/Actual (basic rule)	Method whereby interest is calculated based on the actual number of accrued days and a 365-day year (if the coupon payment date is NOT in a leap year) or a 366-day year (if the coupon payment date is in a leap year).
A010	Actual/Actual (AFB)	Method whereby interest is calculated based on the actual number of accrued days and a 366-day year (if 29 Feb falls in the coupon period) or a 365-day year (if 29 Feb does not fall in the coupon period). If a coupon period is longer than one year, it is split by repetitively separating full year sub-periods counting backwards from the end of the coupon period (a year backwards from a 28 Feb being 29 Feb, if it exists). The first of the sub-periods starts on the start date of the accrued interest period and thus is possibly shorter than a year. Then the interest computation is operated separately on each sub-period and the intermediate results are summed up.
A011	30/360 (ICMA) or 30/360 (basic rule)	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). It is the most commonly used 30/360 method for non-US straight and convertible bonds issued before 01/01/1999.
A012	30E2/360 or Eurobond basis model 2	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for the last day of February whose day of the month value shall be adapted to the value of the first day of the interest period if the latter is higher and if the period is one of a regular schedule. This means that a 31st is assumed to be a 30th and the 28th Feb of a non-leap year is assumed to be equivalent to a 29th Feb when the first day of the interest period is a 29th, or to a 30th Feb when the first day of the interest period is a 30th or a 31st. The 29th Feb of a leap year is assumed to be equivalent to a 30th Feb when the first day of the interest period is a 30th or a 31st. Similarly, if the coupon period starts on the last day of February, it is assumed to produce only one day of interest in February as if it was starting on a 30th Feb when the end of the period is a 30th or a 31st, or two days of interest in February when the end of the period is a 29th, or 3 days of interest in February when it is the 28th Feb of a non-leap year and the end of the period is before the 29th.
A013	30E3/360 or Eurobond basis model 3	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be equivalent to a 30 Feb. It is a variation of the 30E/360 (or Eurobond basis) method where the last day of February is always assumed to be a 30th, even if it is the last day of the maturity coupon period.
A014	Actual/365NL or Actual/365 No Leap	Method whereby interest is calculated based on the actual number of accrued days in the interest period, excluding any leap day from the count, and a 365-day year.
OTHR	Other	Other method than A001-A014. See Narrative.

MT 513 - 98. Field 92a: Rate

4	O	PRIC	N		A or C	Pricing Rate
5	O	SLMG	N		A	Stock Loan Margin
6	O	SHAI	N		A	Securities Haircut

Definition

This qualified generic field specifies:

PRIC	Pricing Rate	Interest rate to be paid on the transaction amount, as agreed between the counterparties.
REPO	Repurchase Rate	Repurchase rate used to calculate the repurchase amount.
RSPR	Spread Rate	Margin over or under an index that determines the repurchase rate.
SHAI	Securities Haircut	Haircut or valuation factor on the security expressed as a percentage.
SLMG	Stock Loan Margin	Percentage mark-up on a loan consideration used to reflect the lender's risk.
VASU	Variable Rate Support	Index or support rate used together with the spread to calculate the repurchase rate.

Network Validated Rules

The integer part of Rate must contain at least one digit. A decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).

If Rate is zero, Sign must not be present (Error code(s): T14).

Usage Rules

In option C, Rate Name specifies the reference rate or basis rate on which a variable rate is based (ex: EONIA, EURIBOR, LIBOR, FEFUND, EURREPO).

Sign must be present when Rate is negative.

Except if notified differently in the rate definition, when used with format option A (:4!c//[N]15d), the rate must be expressed as a percentage, not as a decimal fraction (12% must be identified by 12, and not 0,12).

4	O	ACRU	N		A	Accrued Interest Amount
5	O	DEAL	N		A	Deal Amount
6	O	TAPC	N		A	Termination Amount per Piece of Collateral

Definition

This qualified generic field specifies:

ACRU	Accrued Interest Amount	Amount of interest that has been accrued in between two periods (for second leg).
DEAL	Deal Amount	Principal amount of a trade (for second leg).
FORF	Forfeit Amount	Fixed amount of money that has to be paid (instead of interest) in the case of a recall or at the closing date.
REPP	Premium Amount	Difference between the amount of money of the first leg and the amount of the second leg of the transaction.
TAPC	Termination Amount per Piece of Collateral	Amount of money to be settled per piece of collateral to terminate the transaction.
TRTE	Termination Transaction Amount	Total amount of money to be settled to terminate the transaction.

Network Validated Rules

The integer part of Amount must contain at least one digit. A decimal comma is mandatory and is included in the maximum length. The number of digits following the comma must not exceed the maximum allowed for the specified currency (Error code(s): C03, T40, T43).

Currency Code must be a valid ISO 4217 currency code (Error code(s): T52).

If Amount is zero, Sign must not be present (Error code(s): T14).

Usage Rules

Sign is used when the Amount is credited while the practice or the transaction type would normally imply that the Amount should be debited (or vice versa).

MT 514 Trade Allocation Instruction

MT 514 Scope

This message is sent by an instructing party, for example, a client, or its authorised representative to an executing party, for example, broker-dealer.

This message is used to instruct the allocation of a block trade. One allocation may be contained in each message. Settlement details are optional and may be provided where standing instructions do not apply or are not available.

It may also be used to:

- request the cancellation of a previously sent allocation instruction
- re-send an allocation instruction previously sent
- provide a third party with a copy of the message (be it the instruction or request for cancellation) being sent
- provide pre-allocation details which must be linked back to the original order to buy.

This message may be sent directly or via an ETC service provider between parties to the trade. It may also be sent as a copy from the instructing party to the custodian to provide early settlement information, where an agreement to this effect exists.

This message must not be sent from an ETC service provider to a custodian.

MT 514 Network Validated Rules

- C1** If an Exchange Rate (field :92B::EXCH) is present, the corresponding Resulting Amount (field :19A::RESU) must be present in the same subsequence. If the Exchange Rate is not present the Resulting Amount is not allowed (Error code(s): E62).

Subsequence C3 if field :92B::EXCH is ...	Subsequence C3 then field :19A::RESU is ...
Present	Mandatory
Not present	Not allowed

- C2** When the Type of Price (field :22F::PRIC) is present, the Deal Price (field :90a::DEAL) must also be present (Error code(s): E61).

Sequence B if field :22F::PRIC is ...	Sequence B then field :90a::DEAL is ...
Present	Mandatory
Not present	Optional

- C3** If the Settlement Amount (:19A::SETT) is present in sequence B, it must not be present in any occurrence of subsequence C3 (Error code(s): E73).

Sequence B if field :19A::SETT is ...	Then, for each occurrence of subsequence C3 field :19A::SETT is ...
Present	Not allowed
Not present	Optional

- C4** If the message is a cancellation, that is, Function of the Message (field 23G) is CANC, then subsequence A1 (Linkages) must be present at least once in the message, and in one and only one occurrence of A1, field :20C::PREV must be present; consequently, in all other occurrences of A1, field :20C::PREV is not allowed (Error code(s): E08).

Sequence A if field :23G: is ...	Then subsequence A1 is ...	And field :20C::PREV is ...
CANC	Mandatory (minimum one occurrence of A1 must be present)	Mandatory in one occurrence of subsequence A1, and not allowed in all other occurrences of subsequence A1
NEWM	Optional	Not applicable

- C5** The following party fields for subsequences C1 and C2 cannot appear more than once in sequence C. The party fields for sequence D cannot appear more than once in a message (Error code(s): E84).

Subsequence C1	Subsequence C2	Sequence D
:95a::BUYR	:95a::ACCW	:95a::EXCH

:95a::RECU		
:95a::REI1		
:95a::REI2		
:95a::SELL		

C6 If a qualifier from the list Deliverers is present in a subsequence C1, in a field :95a::4!c, then all the remaining qualifiers following this qualifier in the list Deliverers (see below) must be present (Error code(s): E86).

In other words, in sequence C, the following scenarios must be validated:

- If :95a::DEI2 is present in subsequence C1, then :95a::DEI1 must be present in another subsequence C1.
- If :95a::DEI1 is present in subsequence C1, then :95a::DECU must be present in another subsequence C1.
- If :95a::DECU is present in subsequence C1, then :95a::SELL must be present in another subsequence C1.
- If :95a::SELL is present in subsequence C1, then :95a::DEAG must be present in another subsequence C1.

If a qualifier from the list Receivers is present in a subsequence C1, in a field :95a::4!c, then all the remaining qualifiers following this qualifier in the list Receivers (see below) must be present.

In other words, in sequence C, the following scenarios must be validated:

- If :95a::REI2 is present in subsequence C1, then :95a::REI1 must be present in another subsequence C1.
- If :95a::REI1 is present in subsequence C1, then :95a::RECU must be present in another subsequence C1.
- If :95a::RECU is present in subsequence C1, then :95a::BUYR must be present in another subsequence C1.
- If :95a::BUYR is present in subsequence C1, then :95a::REAG must be present in another subsequence C1.

Not present	Not applicable	Optional	Optional

(1) if the Data Source Scheme is present in field :22F::DBNM//VEND then the conditional rule does not apply.

C9 In sequence D, if field :95a::EXCH Stock Exchange or :95a::TRRE Trade Regulator is present, then field :97a:: is not allowed in the same sequence (Error code(s): E63).

Sequence D if field :95a::EXCH or TRRE is ...	Sequence D then field :97a:: is ...
Present	Not allowed within the same occurrence
Not present	Optional

C10 In sequence B, field :94a::TRAD must not be present more than twice. When repeated, one and only one occurrence must be with format option L (:94L::TRAD) (Error code(s): E99).

In sequence B, field :94a::SAFE must not be present more than twice. When repeated, one and only one occurrence must be with format option L (:94L::SAFE) (Error code(s): E99).

In each occurrence of subsequence B1, field :95a::ALTE must not be present more than twice. When repeated, one and only one occurrence must be with format option L (:95L::ALTE) (Error code(s): E99).

In each occurrence of subsequence C1, field :95a::ALTE must not be present more than twice. When repeated, one and only one occurrence must be with format option L (:95L::ALTE) (Error code(s): E99).

In each occurrence of subsequence C2, field :95a::ALTE must not be present more than twice. When repeated, one and only one occurrence must be with format option L (:95L::ALTE) (Error code(s): E99).

In each occurrence of sequence D, field :95a::ALTE must not be present more than twice. When repeated, one and only one occurrence must be with format option L (:95L::ALTE) (Error code(s): E99).

- C11** In each occurrence of sequence D, if field :95a::ALTE is present with format option L, then field :95a::MEOR and field :95a::MERE must not be present in the same occurrence of the sequence (Error code(s): E88).

MT 514 Usage Rules

- When an instruction is sent to a party other than the original Receiver, this original Receiver is identified in the other parties sequence as :95a::MERE (Recipient of the Message).
- The underlying fund or client, :95a::INVE, must be present.
- When a broker is identified as a confirming party, the party capacity (:22F::TRCA) must be specified.
- When an ETC service provider transfers a message from one institution to another, and when the originator of the message is not already identified in the confirmation parties sequence or the settlement parties sequence, the originating party is identified in the other parties sequence as :95a::MEOR (Originator of Message).
- Since there is only one allocation per MT 514, allocations must be linked by the master reference in the linkage sequence.
- When the message is used to pre-advise allocation details, the Trade Transaction Type must be PALL and the Master Reference must be the same as the one assigned in the associated MT 502 Order to Buy or Sell. The pre-allocation conditions are defined in the associated MT 502 Order to Buy or Sell.
- When the MT 514 is sent to request a cancellation of a previously sent instruction, field 23G must contain the function to cancel, the linkage subsequence must contain the reference of the instruction to be cancelled and the rest of the message a copy of at least the mandatory fields of the instruction to be cancelled. The Allocation Number/Total Number must be a separate series (see field definitions).
- The Receiver of a request to cancel must advise the requesting party that the cancellation has been accepted or denied in an MT 509 Trade Status Message.

MT 514 - 3. Field 23G: Function of the Message

Format

Option G 4!c[/4!c] (Function) (Subfunction)

Presence

Mandatory (referenced in rule C4) in mandatory sequence A

Definition

This field identifies the function of the message.

Codes

Function must contain one of the following codes (Error code(s): T86):

CANC	Cancellation Request	Message requesting the cancellation of a previously sent message.
NEWM	New	New message.

Codes

When present, Subfunction must contain one of the following codes (Error code(s): T85):

CODU	Copy Duplicate	Message is a copy to a party other than the account owner/account servicer, for information purposes and the message is a duplicate of a message previously sent.
COPY	Copy	Message is a copy to a party other than the account owner/account servicer, for information purposes.
DUPL	Duplicate	Message is for information/confirmation purposes. It is a duplicate of a message previously sent.

Usage Rules

To cancel a previously sent instruction, Function is CANC. The reference in the linkage sequence must contain the Sender's reference of the message to be cancelled. A copy of at least the mandatory fields of the message to be cancelled must be present; optional fields need not be present for SWIFT validation.

MT 514 - 4. Field 98a: Date/Time: Preparation Date/Time

Format

Option A :4!c//8!n (Qualifier) (Date)

Option C :4!c//8!n6!n (Qualifier) (Date) (Time)

Option E :4!c//8!n6!n[,3n][/[N]2!n[2!n]] (Qualifier) (Date) (Time) (Decimals) (UTC Indicator)

TRTR Trade Transaction Type Specifies the type of transaction of which the order is a component.

Codes

If Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

BASK	Basket Trade	Transaction is a single order to buy and sell several financial instruments for the purpose of simultaneous buying and selling. Baskets are often used for a set of 15 or more financial instruments and play a role in arbitrage activity.
BRKR	Broker to Broker Trade	Transaction is a trade from a broker to another broker.
FUND	Fund to Fund Trade	Transaction is a trade from an investment fund to another investment fund.
INDX	Index Trade	Transaction is a single order to buy or sell all underlying financial instruments of an index, for example, S&P500.
LIST	List Trade	Transaction is a trade of a predetermined set of financial instruments.
PALL	Pre-Allocation	Transaction is a pre-allocation.
PROG	Program Trade	Transaction relates to computer-driven automatically executed trades in large volumes of a set of several financial instruments.
TRAD	Trade	Transaction is a regular trade.

MT 514 - 6. Field 99B: Number Count

Format

Option B :4!c//3!n (Qualifier) (Number)

Presence

Optional in mandatory sequence A

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	ALLO	N		B	Current Allocation Number
2	O	TOAL	N		B	Total Number of Allocations

Definition

This qualified generic field specifies:

Presence

Optional in optional subsequence A1

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	LINK	N		F	Linkage Type Indicator

Definition

This qualified generic field specifies:

LINK	Linkage Type Indicator	Specifies when the instruction is to be executed relative to a linked instruction.
------	------------------------	--

Codes

If Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

AFTE	After	Indicates that the message is to be processed after the linked message.
BEFO	Before	Indicates that the message is to be processed before the linked message.
INFO	Information	Indicates that the messages are linked for information purposes only.
WITH	With	Indicates that the message is to be processed with the linked message.

Usage Rules

If code WITH is used, it links together one or more instructions which become bound and which must be executed together. Even if one single instruction can not be executed, then all the other instructions must also be kept pending. Therefore the use of code WITH must be limited to combine up to 2 or 3 instructions.

MT 514 - 9. Field 13a: Number Identification: Linked Message

Format

Option A	:4!c//3!c	(Qualifier) (Number Id)
Option B	:4!c/[8c]/30x	(Qualifier) (Data Source Scheme) (Number)

Presence

Optional in optional subsequence A1

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	LINK	N		A or B	Linked Message

Definition

This qualified generic field specifies:

LINK Linked Message Message type number/message identifier of the message referenced in the linkage sequence.

Network Validated Rules

Number (Format Option B) must not start or end with a slash '/' and must not contain two consecutive slashes '/' (Error code(s): T26).

Usage Rules

Format A Number Id must contain the FIN message type number of the linked message.

Format B Number must contain the XML message identifier of the linked message.

MT 514 - 10. Field 20a: Reference

Format

Option C :4!c//16x (Qualifier) (Reference)

Option U :4!c//52x (Qualifier) (UTI Reference)

Presence

Mandatory in optional subsequence A1

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	M	RELA	N		C	Related Message Reference
	or	PREV	N	C4	C	Previous Message Reference

	or	ISSU	N		C	Issuer Reference
	or	BMRB	N		C	Block Matching Reference
	or	ALMR	N		C	Allocation Matching Reference

Definition

This qualified generic field specifies:

ALMR	Allocation Matching Reference	Reference of the linked message at the Detail/Allocation Level which identifies a centrally matched transaction.
BASK	Basket Reference	Reference identifying a basket trade.
BMRB	Block Matching Reference	Reference of the linked message at the Trade/Block Level which identifies a centrally matched transaction.
COLR	Collateral Reference	Reference assigned to a collateral transaction linked to the settlement transaction.
COMM	Common Reference	Unique reference agreed upon by the two trade counterparties to identify the trade.
INDX	Index Reference	Reference identifying an index trade.
ISSU	Issuer Reference	Reference that an issuer attributes to a fund (funds industry).
LIST	List Reference	List reference which identifies a list trade.
MAST	Master Reference	Unique and unambiguous identifier used to link a group of individual transactions together.
PREV	Previous Message Reference	Message reference of the linked message which was previously sent.
PROG	Program Reference	Program reference which identifies a program trade.
RELA	Related Message Reference	Message reference of the linked message which was previously received.
TRRF	Deal Reference	Reference assigned to the trade by the Investment Manager OR the Broker/Dealer. This reference will be used throughout the trade life cycle to access/update the trade details.

Network Validated Rules

Reference must not start or end with a slash '/' and must not contain two consecutive slashes '/' (Error code(s): T26).

MT 514 - 11. Field 16S: End of Block

Format

Option S 16c

Presence

Mandatory in optional subsequence A1

Definition

This field specifies the end of a block and the name of that block.

Codes

This field must contain the following code (Error code(s): T92):

LINK Linkages

MT 514 - 12. Field 16S: End of Block

Format

Option S 16c

Presence

Mandatory in mandatory sequence A

Definition

This field specifies the end of a block and the name of that block.

Codes

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	M	TRAD	N		A, B, C, or E	Trade Date/Time
2	O	SETT	N		A, B, or C	Settlement Date/Time

Definition

This qualified generic field specifies:

SETT	Settlement Date/ Time	Date/time at which the financial instruments are to be delivered or received.
TRAD	Trade Date/Time	Date/time at which the trade was executed.

Codes

In option B, if Qualifier is TRAD and Data Source Scheme is not present, Date Code must contain the following code (Error code(s): K98):

VARI Various Partial trades have occurred over a period of two or more days.

Codes

In option B, if Qualifier is SETT and Data Source Scheme is not present, Date Code must contain one of the following codes (Error code(s): K98):

SEOP	Seller's Option	Settlement is to be completed at the seller's option.
TBAT	To Be Announced	Settlement is to be completed as a result of a 'to be announced' trade.
WDIS	When Distributed	Settlement is to be completed when the security is distributed.
WIDI	When Issued or Distributed	Settlement is to be completed when the security is issued or when distributed.
WISS	When Issued	Settlement is to be completed when the security is issued.

Network Validated Rules

Date must be a valid date expressed as YYYYMMDD (Error code(s): T50).

Time must be a valid time expressed as HHMMSS (Error code(s): T38).

UTC Indicator must be a valid time expressed as HH[MM] (Error code(s): T39).

Sign ([N]) must not be used when UTC Indicator is equal to all zeroes (Error code(s): T14).

Example

Examples of format option E usage:

- Trade date/time is the 23rd of October 2006, at 12:35 and 48 seconds, 2 tenths of a second
 :98E::TRAD//20061023123548,2
- Trade date/time is the 23rd of October 2006, at 12:35 and 48 seconds, 25 hundreds of a second, UTC time +2
 :98E::TRAD//20061023123548,25/02
- Trade date/time is the 23rd of October 2006, at 12:35 and 48 seconds, UTC time - 4
 :98E::TRAD//20061023123548/N04
- Trade date/time is the 23rd of October 2006, at 12:35 and 48 seconds, UTC time - 2h30

MT 514 - 15. Field 90a: Price

Format

Option A	:4!c//4!c/[N]15d	(Qualifier) (Percentage Type Code) (Sign) (Price)
Option B	:4!c//4!c/3!a15d	(Qualifier) (Amount Type Code) (Currency Code) (Price)

Presence

Optional in mandatory sequence B

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	DEAL	N	C2	A or B	Deal Price
2	O	MAUP	N		A or B	Marked Up Price
	or	MADW	N		A or B	Marked Down Price

Definition

This qualified generic field specifies:

DEAL	Deal Price	Price of the traded financial instrument.
MADW	Marked Down Price	In case of an order to sell, the price the broker receives in the market minus the broker's commission.
MAUP	Marked Up Price	In case of an order to buy, the price that the broker paid on the market plus the broker's commission.

Codes

In option A, Percentage Type Code must contain one of the following codes (Error code(s): K90):

DISC	Discount	Price expressed as the number of percentage points below par, for example, a discount price of 2.0% equals a price of 98 when par is 100.
PRCT	Percentage	Price expressed as a percentage of par.
PREM	Premium	Price expressed as the number of percentage points above par, for example, a premium price of 2.0% equals a price of 102 when par is 100.
YIEL	Yield	Price expressed as a yield.

Codes

In option B, Amount Type Code must contain one of the following codes (Error code(s): K90):

ACTU	Actual Amount	Price expressed as an amount of currency per unit or per share.
DISC	Discount	Price expressed as a discount amount.
PREM	Premium	Price expressed as a premium.

Network Validated Rules

Currency Code must be a valid ISO 4217 currency code (Error code(s): T52).

The integer part of Price must contain at least one digit. A decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).

Sign may only be present if Percentage Type Code is YIEL (Error code(s): T69).

If Price is zero, Sign must not be present (Error code(s): T14).

Usage Rules

The number of decimal digits in Price is not validated against the currency specified.

Sign must be present when Price is negative.

MT 514 - 16. Field 92A: Rate

Format

Option A :4!c//[N]15d (Qualifier) (Sign) (Rate)

Presence

Optional in mandatory sequence B

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	CORA	N		A	Commission Rate Applied
2	O	COWA	N		A	Percentage Commission Waived

Definition

This qualified generic field specifies:

CORA Commission Rate Applied Commission rate applied after waiving.

COWA Percentage Commission Waived Percentage of the commission that is waived.

Network Validated Rules

The integer part of Rate must contain at least one digit. A decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).

If Rate is zero, Sign must not be present (Error code(s): T14).

Usage Rules

Sign must be present when Rate is negative.

Except if notified differently in the rate definition, when used with format option A (:4!c//[N]15d), the rate must be expressed as a percentage, not as a decimal fraction (12% must be identified by 12, and not 0,12).

MT 514 - 17. Field 99A: Number Count

Format

Option A :4!c//[N]3!n (Qualifier) (Sign) (Number)

Presence

Optional in mandatory sequence B

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	DAAC	N		A	Number of Days Accrued
2	O	GIUP	N		A	Give-Up Number of Days

Definition

This qualified generic field specifies:

DAAC	Number of Days Accrued	Number of days used for calculating the accrued interest amount.
GIUP	Give-Up Number of Days	Number of days from the trade date that the trading party on the other side should divulge details of the transaction.

Network Validated Rules

If Number is zero, Sign must not be present (Error code(s): T14).

Usage Rules

Sign must be present when Number is negative.

MT 514 - 18. Field 94a: Place

Format

Option B :4!c/[8c]/4!c[/30x] (Qualifier) (Data Source Scheme) (Place Code) (Narrative)

Option C :4!c//2!a (Qualifier) (Country Code)

Option F :4!c//4!c/4!a2!a2!c[3!c] (Qualifier) (Place Code) (Identifier Code)

Option L :4!c//18!c2!n (Qualifier) (Legal Entity Identifier)

Presence

Optional in mandatory sequence B

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	TRAD	R	C10	B or L	Place of Trade
2	O	SAFE	R	C10	B, C, F, or L	Place of Safekeeping

Definition

This qualified generic field specifies:

SAFE	Place of Safekeeping	Location where the financial instruments are/will be safekept.
TRAD	Place of Trade	Place at which the order was traded.

Codes

In option B, if Qualifier is TRAD and Data Source Scheme is not present, Place Code must contain one of the following codes (Error code(s): K94):

EXCH	Stock Exchange	Trade was executed on a stock exchange.
OTCO	Over The Counter	Trade was executed over-the-counter.
PRIM	Primary Market	Trade was executed on a primary market.
SECM	Secondary Market	Trade was executed on a secondary market.
VARI	Various	Trade was executed on various places.

Codes

In option B, if Qualifier is SAFE and Data Source Scheme is not present, Place Code must contain the following code (Error code(s): K94):

SHHE	Shares Held Elsewhere	Used for certain financial instruments, for example, US mutual funds, where settlement is internal only, that is, there is no external movement of securities.
------	-----------------------	--

Codes

In option F, if Qualifier is SAFE, Place Code must contain one of the following codes (Error code(s): K94):

CUST	Local Custodian	Financial instruments held at a local custodian.
ICSD	International Central Securities Depository	Financial instruments held at an International Central Securities Depository.

NCS D	National Central Securities Depository	Financial instruments held at a National Central Securities Depository.
SHHE	Shares Held Elsewhere	Used for certain financial instruments, for example, US mutual funds, where settlement is internal only, that is, there is no external movement of securities.

Network Validated Rules

Country Code must be a valid ISO country code (Error code(s): T73).

Identifier Code must be a registered BIC (Error code(s): T27, T28, T29, T45).

Narrative (Format Option B) must not start or end with a slash '/' and must not contain two consecutive slashes '/' (Error code(s): T26).

Usage Rules

When Place Code is OTCO, Narrative, if present, must specify the system, for example, OTCO/TELEKURS. When Place Code is EXCH, Narrative, if present, must specify the Market Identifier Code (MIC), for example, EXCH/XNYS for the New York Stock Exchange.

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	SETT	N	C3	A	Settlement Amount
2	O	SEBL	N		A	Settlement Amount of Block Trade

Definition

This qualified generic field specifies:

SEBL	Settlement Amount of Block Trade	Settlement amount of the block trade.
SETT	Settlement Amount	Total amount of money to be paid or received in exchange for the financial instrument.

Network Validated Rules

Currency Code must be a valid ISO 4217 currency code (Error code(s): T52).

The integer part of Amount must contain at least one digit. A decimal comma is mandatory and is included in the maximum length. The number of digits following the comma must not exceed the maximum allowed for the specified currency (Error code(s): C03, T40, T43).

If Amount is zero, Sign must not be present (Error code(s): T14).

Usage Rules

Sign is used when the Amount is credited while the practice or the transaction type would normally imply that the Amount should be debited (or vice versa).

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	MICO	N		F	Method of Interest Computation Indicator
2	O	FORM	N		F	Form of Securities Indicator
3	O	PFRE	N		F	Payment Frequency Indicator
4	O	PAYS	N		F	Payment Status Indicator
5	O	CFRE	N		F	Variable Rate Change Frequency Indicator

Definition

This qualified generic field specifies:

CFRE	Variable Rate Change Frequency Indicator	Specifies the frequency of change to the variable rate of an interest bearing instrument.
FORM	Form of Securities Indicator	Specifies the form of the financial instrument.
MICO	Method of Interest Computation Indicator	Specifies the computation method of (accrued) interest of the financial instrument.
PAYS	Payment Status Indicator	Specifies the status of the payment of a financial instrument at a particular time, as agreed with the issuer.
PFRE	Payment Frequency Indicator	Specifies the frequency of a payment.

Codes

If Qualifier is MICO and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

A001	30/360 (ISDA) or 30/360 (American Basic Rule)	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February, and provided that the interest period started on a 30th or a 31st. This means that a 31st is assumed to be a 30th if the period started on a 30th or a 31st and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). It is the most commonly used 30/360 method for US straight and convertible bonds.
------	---	---

A002	30/365	Method whereby interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and a 365-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th).
A003	30/Actual	Method whereby interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and the assumed number of days in a year in a way similar to the Actual/Actual (ICMA). Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). The assumed number of days in a year is computed as the actual number of days in the coupon period multiplied by the number of interest payments in the year.
A004	Actual/360	Method whereby interest is calculated based on the actual number of accrued days in the interest period and a 360-day year.
A005	Actual/365 (Fixed)	Method whereby interest is calculated based on the actual number of accrued days in the interest period and a 365-day year.
A006	Actual/Actual (ICMA)	Method whereby interest is calculated based on the actual number of accrued days and the assumed number of days in a year, that is, the actual number of days in the coupon period multiplied by the number of interest payments in the year. If the coupon period is irregular (first or last coupon), it is extended or split into quasi interest periods that have the length of a regular coupon period and the computation is operated separately on each quasi interest period and the intermediate results are summed up.
A007	30E/360 or Eurobond basis	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be equivalent to a 30 Feb. However, if the last day of the maturity coupon period is the last day of February, it will not be assumed to be a 30th. It is a variation of the 30/360 (ICMA) method commonly used for eurobonds. The usage of this variation is only relevant when the coupon periods are scheduled to end on the last day of the month.
A008	Actual/Actual (ISDA)	Method whereby interest is calculated based on the actual number of accrued days of the interest period that fall on a normal year, divided by 365, added to the actual number of days of the interest period that fall on a leap year, divided by 366.
A009	Actual/365L or Actual/Actual (basic rule)	Method whereby interest is calculated based on the actual number of accrued days and a 365-day year (if the coupon payment date is NOT in a leap year) or a 366-day year (if the coupon payment date is in a leap year).

A010	Actual/Actual (AFB)	Method whereby interest is calculated based on the actual number of accrued days and a 366-day year (if 29 Feb falls in the coupon period) or a 365-day year (if 29 Feb does not fall in the coupon period). If a coupon period is longer than one year, it is split by repetitively separating full year sub-periods counting backwards from the end of the coupon period (a year backwards from a 28 Feb being 29 Feb, if it exists). The first of the sub-periods starts on the start date of the accrued interest period and thus is possibly shorter than a year. Then the interest computation is operated separately on each sub-period and the intermediate results are summed up.
A011	30/360 (ICMA) or 30/360 (basic rule)	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). It is the most commonly used 30/360 method for non-US straight and convertible bonds issued before 01/01/1999.
A012	30E2/360 or Eurobond basis model 2	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for the last day of February whose day of the month value shall be adapted to the value of the first day of the interest period if the latter is higher and if the period is one of a regular schedule. This means that a 31st is assumed to be a 30th and the 28th Feb of a non-leap year is assumed to be equivalent to a 29th Feb when the first day of the interest period is a 29th, or to a 30th Feb when the first day of the interest period is a 30th or a 31st. The 29th Feb of a leap year is assumed to be equivalent to a 30th Feb when the first day of the interest period is a 30th or a 31st. Similarly, if the coupon period starts on the last day of February, it is assumed to produce only one day of interest in February as if it was starting on a 30th Feb when the end of the period is a 30th or a 31st, or two days of interest in February when the end of the period is a 29th, or 3 days of interest in February when it is the 28th Feb of a non-leap year and the end of the period is before the 29th.
A013	30E3/360 or Eurobond basis model 3	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be equivalent to a 30 Feb. It is a variation of the 30E/360 (or Eurobond basis) method where the last day of February is always assumed to be a 30th, even if it is the last day of the maturity coupon period.
A014	Actual/365NL or Actual/365 No Leap	Method whereby interest is calculated based on the actual number of accrued days in the interest period, excluding any leap day from the count, and a 365-day year.
OTHR	Other	Other method than A001-A014. See Narrative.

Codes

If Qualifier is FORM and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

BEAR	Bearer Security	Financial instruments are in bearer form.
REGD	Registered Security	Financial instruments are in registered form.

Codes

If Qualifier is PFRE and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

ANNU	Annual	Payment frequency is annual.
MNTH	Monthly	Payment frequency is monthly.
QUTR	Quarterly	Payment frequency is quarterly.
SEMI	Semi-Annual	Payment frequency is semi-annual.
WEEK	Weekly	Payment frequency is weekly.

Codes

If Qualifier is PAYS and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

FULL	Fully Paid	Financial instrument is fully paid.
NILL	Nil Paid	Financial instrument is nil paid.
PART	Partially Paid	Financial instrument is partially paid.

Codes

If Qualifier is CFRE and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

ANNU	Annual	Frequency is annual.
MNTH	Monthly	Frequency is monthly.
QUTR	Quarterly	Frequency is quarterly.
SEMI	Semi-Annual	Frequency is semi-annual.
WEEK	Weekly	Frequency is weekly.

MT 514 - 35. Field 12a: Type of Financial Instrument

Format

Option A :4!c/[8c]/30x (Qualifier) (Data Source Scheme)
(Instrument Code or Description)

Option B	:4!c/[8c]/4!c	(Qualifier) (Data Source Scheme) (Instrument Type Code)
Option C	:4!c//6!c	(Qualifier) (CFI Code)

Presence

Optional in optional subsequence B2

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	CLAS	N		A or C	Classification Type
2	O	OPST	N		B	Option Style
3	O	OPTI	N		B	Option Type

Definition

This qualified generic field specifies:

CLAS	Classification Type	Classification type of the financial instrument, for example, ISO Classification of Financial instrument (CFI).
OPST	Option Style	Specifies how an option can be exercised.
OPTI	Option Type	Specifies whether it is a call option or a put option.

Codes

In option B, if Qualifier is OPST and Data Source Scheme is not present, Instrument Type Code must contain one of the following codes (Error code(s): K12):

AMER	American Style	Option can be exercised before or on expiry date.
EURO	European Style	Option can be exercised on expiry date only.

Codes

In option B, if Qualifier is OPTI and Data Source Scheme is not present, Instrument Type Code must contain one of the following codes (Error code(s): K12):

CALL	Call Option	A right to buy a defined quantity of an asset by a certain date at an agreed price.
PUTO	Put Option	A right to sell a defined quantity of an asset by a certain date at an agreed price.

Usage Rules

When option C is used, CFI Code must be a valid ISO CFI code.

To use the codes associated with the ISITC code for security type, /ASCT/, Data Source Scheme must be ISIT, and Instrument Code or Description must contain a valid ISITC security type code.

Example

:12C::CLAS//ESVUFR

(CFI code for equity, common share, voting rights, unrestricted, fully paid and registered).

11	O	NWFC	N		A	Next Factor Date

Definition

This qualified generic field specifies:

CALD	Call Date	Date on which a financial instrument is called away/redeemed before its scheduled maturity date.
CONV	Conversion Date	Deadline by which a convertible security must be converted, according to the terms of the issue.
COUP	Coupon Date	Next payment date of an interest bearing financial instrument.
DDTE	Dated Date	Date on which an interest bearing financial instrument begins to accrue interest.
EXPI	Expiry Date	Date on which an order expires or on which a privilege or offer terminates.
FCOU	First Coupon Date	First payment date of an interest bearing financial instrument.
FRNR	Floating Rate Note Reset Date	Date on which the interest rate of an interest bearing financial instrument will be/was calculated and reset, according to the terms of the issue.
ISSU	Issue Date	Date on which the financial instrument is issued.
MATU	Maturity Date	Date on which a financial instrument becomes due and assets are to be repaid.
NWFC	Next Factor Date	Date on which the current factor will be changed to the next factor.

PUTT **Put Date** Date on which a holder of a financial instrument has the right to request redemption of the principal amount prior to its scheduled maturity date.

Network Validated Rules

Date must be a valid date expressed as YYYYMMDD (Error code(s): T50).

MT 514 - 38. Field 92A: Rate

5	O	NXRT	N		A	Next Interest Rate
6	O	INDX	N		A	Index Factor
7	O	YTMR	N		A	Yield To Maturity Rate

Definition

This qualified generic field specifies:

CUFC	Current Factor	Rate expressed as a decimal between 0 and 1 defining the outstanding principal of the financial instrument (for factored securities).
INDX	Index Factor	Public index rate used for inflation adjustment.
INTR	Interest Rate	Annualised interest rate of a financial instrument used to calculate the actual interest rate of the coupon or the accrued interest.
NWFC	Next Factor	Rate expressed as a decimal between 0 and 1 that will be applicable as of the next factor date and defines the outstanding principal of the financial instrument (for factored securities).

NXRT	Next Interest Rate	Interest rate applicable to the next interest payment period in relation to variable rate instruments.
PRFC	Previous Factor	Rate expressed as a decimal between 0 and 1 that was applicable before the current factor and defines the outstanding principal of the financial instrument (for factored securities).
YTMR	Yield To Maturity Rate	Rate of return anticipated on a bond when held until maturity date.

Network Validated Rules

The integer part of Rate must contain at least one digit. A decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).

If Rate is zero, Sign must not be present (Error code(s): T14).

Usage Rules

Sign must be present when Rate is negative.

Except if notified differently in the rate definition, when used with format option A (:4!c/[N]15d), the rate must be expressed as a percentage, not as a decimal fraction (12% must be identified by 12, and not 0,12).

4	O	VERN	N		A or B	Version Number

Definition

This qualified generic field specifies:

COUP	Coupon Number	Number of the next coupon attached/associated with a security.
LOTS	Lot Number	Number identifying a lot constituting the financial instrument.
POOL	Pool Number	Number identifying a group of underlying assets assigned by the issuer of a factored security.
VERN	Version Number	Version number of the option contract or tranche of the related financial instrument.

Network Validated Rules

Number (Format Option B) must not start or end with a slash '/' and must not contain two consecutive slashes '//' (Error code(s): T26).

MT 514 - 40. Field 17B: Flag

5	O	PUTT	N		B	Puttable Flag
6	O	WRTS	N		B	Warrants Attached on Delivery Flag
7	O	ODDC	N		B	Odd Coupon Flag

Definition

This qualified generic field specifies:

CALL	Callable Flag	Indicates whether the issuer has the right to repay the financial instrument prior to maturity.
CONV	Convertible Flag	Indicates whether the financial instrument is convertible into another type of financial instrument.

COVE	Covered Flag	Indicates whether the underlying financial instrument of an option is owned by the writer of the option.
FRNF	Floating Rate Note Flag	Indicates whether the interest rate of an interest bearing instrument is reset periodically.
ODDC	Odd Coupon Flag	Indicates whether the payment of the coupon (interest) on an interest bearing instrument is off the normal schedule.
PUTT	Puttable Flag	Indicates whether the holder has the right to ask for redemption of the financial instrument prior to final maturity.
WRTS	Warrants Attached on Delivery Flag	Indicates whether the warrants on a financial instrument (which has been traded cum warrants) will be attached on delivery.

Codes

Flag must contain one of the following codes (Error code(s): K17):

N	No	No.
Y	Yes	Yes.

MT 514 - 41. Field 90a: Price

2	O	EXER	N		A or B	Exercise Price

Definition

This qualified generic field specifies:

EXER	Exercise Price	<ol style="list-style-type: none">1. Price at which the security will be purchased/sold if warrant is exercised, represented either as an actual amount (option B) or a percentage (option A).2. Price at which a bond is converted, represented either as an actual amount (option B) or a percentage (option A).3. Strike price of an option, represented either as an actual amount (option B) or a percentage (option A).
INDC	Indicative Price	Estimated price, for example, for valuation purposes.
MRKT	Market Price	Last reported/known price of a financial instrument in a market.

Codes

In option A, Percentage Type Code must contain one of the following codes (Error code(s): K90):

DISC	Discount	Price expressed as the number of percentage points below par, for example, a discount price of 2.0% equals a price of 98 when par is 100.
PRCT	Percentage	Price expressed as a percentage of par.
PREM	Premium	Price expressed as the number of percentage points above par, for example, a premium price of 2.0% equals a price of 102 when par is 100.
YIEL	Yield	Price expressed as a yield.

Codes

In option B, Amount Type Code must contain one of the following codes (Error code(s): K90):

ACTU	Actual	Price expressed as an amount of currency per unit or per share.
DISC	Discount	Price expressed as a discount amount.
PREM	Premium	Price expressed as a premium.

Network Validated Rules

Currency Code must be a valid ISO 4217 currency code (Error code(s): T52).

The integer part of Price must contain at least one digit. A decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).

Sign may only be present if Percentage Type Code is YIEL (Error code(s): T69).

If Price is zero, Sign must not be present (Error code(s): T14).

Usage Rules

The number of decimal digits in Price is not validated against the currency specified.

Sign must be present when Price is negative.

1	O	MINO	N		B or D	Minimum Nominal Quantity
2	O	SIZE	N		B or D	Contract Size
3	O	ORGV	N		B or D	Original Face Amount

Definition

This qualified generic field specifies:

MINO	Minimum Nominal Quantity	Minimum nominal quantity of financial instrument.
ORGV	Original Face Amount	Original par or nominal value of a financial instrument.
SIZE	Contract Size	Ratio or multiplying factor used to convert one contract into a financial instrument quantity.

Codes

In option B, if Qualifier is MINO or Qualifier is SIZE, Quantity Type Code must contain one of the following codes (Error code(s): K36):

AMOR	Amortised Value	Quantity expressed as an amount representing the current amortised face amount of a bond, for example, a periodic reduction/increase of a bond's principal amount.
FAMT	Face Amount	Quantity expressed as an amount representing the face amount, that is, the principal, of a debt instrument.
UNIT	Unit Number	Quantity expressed as a number, for example, a number of shares.

Codes

In option D, Quantity Type Code must contain the following code (Error code(s): K36):

DITU	Digital Token Unit Number	Quantity of digital token expressed as a number, for example, a number of blockchain tokens.
------	---------------------------	--

Codes

In option B, if Qualifier is ORGV, Quantity Type Code must contain the following code (Error code(s): K36):

FAMT	Face Amount	Quantity expressed as an amount representing the face amount, that is, the principal, of a debt instrument.
------	-------------	---

Network Validated Rules

The integer part of Quantity must contain at least one digit. A decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).

Usage Rules

Format option D may only be used when the related account information in subsequence B1 field : 97D::BCAW is present.

MT 514 - 43. Field 35B: Identification of the Financial Instrument

Format

Option B	[ISIN!e12!c] [4*35x]	(Identification of Security) (Description of Security)
----------	-------------------------	---

Presence

Optional in optional subsequence B2

Definition

This field identifies the underlying financial instrument.

Network Validated Rules

At least Identification of a Security (Subfield 1) or Description of Security (Subfield 2) must be present; both may be present (Error code(s): T17).

ISIN is used at the beginning of Identification of Security (Subfield 1) and must be composed of uppercase letters only (Error code(s): T12).

Usage Rules

The financial Instrument field 35B in the Financial Instrument Attributes subsequence must only be used for the identification of the underlying instrument(s) of a derivative. It must not be used, for example, for the listing of the underlying securities of an index.

When used in Description of Security (Subfield 2), codes must start and end with a slash '/'.

When an ISIN identifier is not used it is strongly recommended that one of the following codes be used as the first characters of the Description of Security (Subfield 2):

[/2!a/]	The ISO two-digit country code, followed by the national scheme number.
---------	---

- [/TS/] Followed by the ticker symbol.
- [/XX/] Bilaterally agreed or proprietary scheme which may be further identified by a code or short description identifying the scheme used.
- [/4!c/] Code identifying the type of security identifier used. This code must be one published by ISO 20022 (ExternalFinancialInstrumentIdentificationTypeCode).

It is strongly recommended that the ISIN be used.

Example

An ISIN will be identified as follows:

:35B:ISIN US0123456704

A SEDOL will be identified as follows:

:35B:/GB/0123456

A CUSIP will be identified as follows:

:35B:/US/012345670

A proprietary scheme will be identified as follows:

:35B:/XX/SCHEMEUSED 0123456700

VATA	Value-Added Tax	Amount of value added tax.
WITH	Withholding Tax	Amount of money that will be withheld by a tax authority.

Network Validated Rules

Currency Code must be a valid ISO 4217 currency code (Error code(s): T52).

The integer part of Amount must contain at least one digit. A decimal comma is mandatory and is included in the maximum length. The number of digits following the comma must not exceed the maximum allowed for the specified currency (Error code(s): C03, T40, T43).

If Amount is zero, Sign must not be present (Error code(s): T14).

Usage Rules

Sign is used when the Amount is credited while the practice or the transaction type would normally imply that the Amount should be debited (or vice versa).

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	VALU	N		A or C	Value Date/Time

Definition

This qualified generic field specifies:

VALU	Value Date/Time	Date/time at which cash becomes available to the account owner (in a credit entry), or cease to be available to the account owner (in a debit entry).
------	-----------------	---

Network Validated Rules

Date must be a valid date expressed as YYYYMMDD (Error code(s): T50).

Presence

Optional in optional subsequence C3

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	EXCH	N	C1	B	Exchange Rate

Definition

This qualified generic field specifies:

EXCH Exchange Rate Exchange rate between the amount and the resulting amount.

Network Validated Rules

First Currency Code and Second Currency Code must be valid ISO 4217 currency codes (Error code(s): T52).

The integer part of Rate must contain at least one digit. A decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).

Usage Rules

The order of the two currencies specified here is independent of the currencies in the amount and resulting amount fields. Therefore the exchange rate can be expressed as a reciprocal if required.

For the calculation of the rate itself, the First Currency Code will be the base currency and the Second Currency Code will be the quoted currency (1,00 of First Currency Code = [Rate] of Second Currency Code).

Example

The exchange rate between US Dollars and Pounds Sterling can be shown as:

:92B::EXCH//GBP/USD/1,619 (1,00 GBP = 1,619 USD)

or as

:92B::EXCH//USD/GBP/0,618 (1,00 USD = 0,618 GBP)

Codes

In option S, if Qualifier is ALTE and Data Source Scheme is not present, Type of ID must contain one of the following codes (Error code(s): K95):

ARNU	Alien Registration Number	Number assigned by a government agency to identify foreign nationals.
CCPT	Passport Number	Number assigned by a passport authority.
CHTY	Tax Exempt Identification Number	Number assigned to a tax exempt entity.
CORP	Corporate Identification	Number assigned to a corporate entity.
DRLC	Driver's Licence Number	Number assigned to a driver's licence.
FIIN	Foreign Investment Identity Number	Number assigned to a foreign investor (other than the alien number).
TXID	Tax Identification Number	Number assigned by a tax authority to an entity.

Network Validated Rules

Country Code must be a valid ISO country code (Error code(s): T73).

Identifier Code must be a registered BIC (Error code(s): T27, T28, T29, T45).

Proprietary code (Format Option R), Alternate ID (Format Option S) and Name and Address (Format Option Q) must not start or end with a slash '/' and must not contain two consecutive slashes '//'. For field formats with more than 1 line, the rule applies for each line (Error code(s): T26).

Usage Rules

In option R, Proprietary Code specifies a local national code or market segment code identifying the party.

In option S:

- Type of ID specifies the type of alternate identification that can be used to give an alternate identification of the party identified in this sequence.
- Country Code specifies the country for which the alternate identification is relevant.
- Alternate ID specifies an alternate identification of the party identified in this sequence.

FIXE	Fixed	Rate is fixed.
FORF	Forfeit	No specific rate applies to the transaction, only a forfeit.
VARI	Variable	Rate is variable.

Codes

If Qualifier is MICO and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

A001	30/360 (ISDA) or 30/360 (American Basic Rule)	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February, and provided that the interest period started on a 30th or a 31st. This means that a 31st is assumed to be a 30th if the period started on a 30th or a 31st and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). It is the most commonly used 30/360 method for US straight and convertible bonds.
A002	30/365	Method whereby interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and a 365-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th).
A003	30/Actual	Method whereby interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and the assumed number of days in a year in a way similar to the Actual/Actual (ICMA). Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). The assumed number of days in a year is computed as the actual number of days in the coupon period multiplied by the number of interest payments in the year.
A004	Actual/360	Method whereby interest is calculated based on the actual number of accrued days in the interest period and a 360-day year.
A005	Actual/365 (Fixed)	Method whereby interest is calculated based on the actual number of accrued days in the interest period and a 365-day year.

A006	Actual/Actual (ICMA)	Method whereby interest is calculated based on the actual number of accrued days and the assumed number of days in a year, that is, the actual number of days in the coupon period multiplied by the number of interest payments in the year. If the coupon period is irregular (first or last coupon), it is extended or split into quasi interest periods that have the length of a regular coupon period and the computation is operated separately on each quasi interest period and the intermediate results are summed up.
A007	30E/360 or Eurobond basis	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be equivalent to a 30 Feb. However, if the last day of the maturity coupon period is the last day of February, it will not be assumed to be a 30th. It is a variation of the 30/360 (ICMA) method commonly used for eurobonds. The usage of this variation is only relevant when the coupon periods are scheduled to end on the last day of the month.
A008	Actual/Actual (ISDA)	Method whereby interest is calculated based on the actual number of accrued days of the interest period that fall on a normal year, divided by 365, added to the actual number of days of the interest period that fall on a leap year, divided by 366.
A009	Actual/365L or Actual/Actual (basic rule)	Method whereby interest is calculated based on the actual number of accrued days and a 365-day year (if the coupon payment date is NOT in a leap year) or a 366-day year (if the coupon payment date is in a leap year).
A010	Actual/Actual (AFB)	Method whereby interest is calculated based on the actual number of accrued days and a 366-day year (if 29 Feb falls in the coupon period) or a 365-day year (if 29 Feb does not fall in the coupon period). If a coupon period is longer than one year, it is split by repetitively separating full year sub-periods counting backwards from the end of the coupon period (a year backwards from a 28 Feb being 29 Feb, if it exists). The first of the sub-periods starts on the start date of the accrued interest period and thus is possibly shorter than a year. Then the interest computation is operated separately on each sub-period and the intermediate results are summed up.
A011	30/360 (ICMA) or 30/360 (basic rule)	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). It is the most commonly used 30/360 method for non-US straight and convertible bonds issued before 01/01/1999.

A012	30E2/360 or Eurobond basis model 2	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for the last day of February whose day of the month value shall be adapted to the value of the first day of the interest period if the latter is higher and if the period is one of a regular schedule. This means that a 31st is assumed to be a 30th and the 28th Feb of a non-leap year is assumed to be equivalent to a 29th Feb when the first day of the interest period is a 29th, or to a 30th Feb when the first day of the interest period is a 30th or a 31st. The 29th Feb of a leap year is assumed to be equivalent to a 30th Feb when the first day of the interest period is a 30th or a 31st. Similarly, if the coupon period starts on the last day of February, it is assumed to produce only one day of interest in February as if it was starting on a 30th Feb when the end of the period is a 30th or a 31st, or two days of interest in February when the end of the period is a 29th, or 3 days of interest in February when it is the 28th Feb of a non-leap year and the end of the period is before the 29th.
A013	30E3/360 or Eurobond basis model 3	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be equivalent to a 30 Feb. It is a variation of the 30E/360 (or Eurobond basis) method where the last day of February is always assumed to be a 30th, even if it is the last day of the maturity coupon period.
A014	Actual/365NL or Actual/365 No Leap	Method whereby interest is calculated based on the actual number of accrued days in the interest period, excluding any leap day from the count, and a 365-day year.
OTHR	Other	Other method than A001-A014. See Narrative.

PRIC	Pricing Rate	Interest rate to be paid on the transaction amount, as agreed between the counterparties.
REPO	Repurchase Rate	Repurchase rate used to calculate the repurchase amount.
RSPR	Spread Rate	Margin over or under an index that determines the repurchase rate.
SHAI	Securities Haircut	Haircut or valuation factor on the security expressed as a percentage.
SLMG	Stock Loan Margin	Percentage mark-up on a loan consideration used to reflect the lender's risk.
VASU	Variable Rate Support	Index or support rate used together with the spread to calculate the repurchase rate.

Network Validated Rules

The integer part of Rate must contain at least one digit. A decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).

If Rate is zero, Sign must not be present (Error code(s): T14).

Usage Rules

In option C, Rate Name specifies the reference rate or basis rate on which a variable rate is based (ex: EONIA, EURIBOR, LIBOR, FEFUND, EURREPO).

Sign must be present when Rate is negative.

Except if notified differently in the rate definition, when used with format option A (:4!c//[N]15d), the rate must be expressed as a percentage, not as a decimal fraction (12% must be identified by 12, and not 0,12).

Note *The use of this message for investment funds is subject to restrictions - the message may only be sent or received by institutions that are members of the Funds Closed User Group.*

MT 515 Scope

This message is sent by an executing party, for example, a broker-dealer, to an instructing party, for example, a client, or its authorised representative.

This message is used to confirm the details of a purchase or sale executed by the executing party on behalf of the instructing party. It is also used to provide details on the payment side of the transaction.

It may also be used to:

- request the cancellation of a previously sent client confirmation
- re-send a client confirmation previously sent
- provide a third party with a copy of the message (be it the confirmation or request for cancellation) being sent.

Where legally accepted, this message serves as an electronic contract note which is legally binding on both parties.

Where a block trade has been executed and allocation instructions provided, one client confirmation must be sent per allocation.

This message may be sent directly or via an ETC service provider between parties to the trade. It may also be sent as a copy from the instructing party and/or executing party to their respective custodians, to provide settlement information where an agreement to this effect exists.

This message must not be sent by an ETC service provider to a custodian.

MT 515 Network Validated Rules

- C1** If an Exchange Rate (field :92B::EXCH) is present, the corresponding Resulting Amount (field :19A::RESU) must be present in the same subsequence. If the Exchange Rate is not present the Resulting Amount is not allowed (Error code(s): E62).

Subsequence D3 if field :92B::EXCH is ...	Subsequence D3 then field :19A::RESU is ...
Present	Mandatory
Not present	Not allowed

- C2** If the Settlement Amount (:19A::SETT) is present in sequence C, it must not be present in any occurrence of subsequence D3 (Error code(s): E73).

Sequence C if field :19A::SETT is ...	Then, for each occurrence of subsequence D3 field :19A::SETT is ...
Present	Not allowed
Not present	Optional

- C3** If the message is a cancellation, that is, Function of the Message (field 23G) is CANC, then field :20C::PREV must be present in one and only one occurrence of A1; consequently, in all other occurrences of A1, field :20C::PREV is not allowed (Error code(s): E08).

Sequence A if field :23G: is ...	Then field :20C::PREV is ...
CANC	Mandatory in one occurrence of subsequence A1, and not allowed in all other occurrences of subsequence A1
NEWM	Not applicable
PREA	Not applicable

C4 The following party fields for subsequences D1 and D2 cannot appear more than once in sequence D. The party fields for sequence E cannot appear more than once in a message (Error code(s): E84):

Subsequence D1	Subsequence D2	Sequence E
:95a::BUYR	:95a::ACCW	:95a::EXCH
:95a::DEAG	:95a::BENM	:95a::MEOR
:95a::DECU	:95a::PAYE	:95a::MERE
:95a::DEI1	:95a::DEBT	:95a::TRRE
:95a::DEI2	:95a::INTM	:95a::VEND
:95a::PSET		:95a::TRAG
:95a::REAG		
:95a::RECU		
:95a::REI1		
:95a::REI2		
:95a::SELL		

C5 If a qualifier from the list Deliverers is present in a subsequence D1, in a field :95a::4!c, then all the remaining qualifiers following this qualifier in the list Deliverers (see below) must be present (Error code(s): E86).

In other words, in sequence D, the following scenarios must be validated:

- If :95a::DEI2 is present in subsequence D1, then :95a::DEI1 must be present in another subsequence D1.
- If :95a::DEI1 is present in subsequence D1, then :95a::DECU must be present in another subsequence D1.
- If :95a::DECU is present in subsequence D1, then :95a::SELL must be present in another subsequence D1.

- If :95a::SELL is present in subsequence D1, then :95a::DEAG must be present in another subsequence D1.

If a qualifier from the list Receivers is present in a subsequence D1, in a field :95a::4!c, then all the remaining qualifiers following this qualifier in the list Receivers (see below) must be present.

In other words, in sequence D, the following scenarios must be validated:

- If :95a::REI2 is present in subsequence D1, then :95a::REI1 must be present in another subsequence D1.
- If :95a::REI1 is present in subsequence D1, then :95a::RECU must be present in another subsequence D1.
- If :95a::RECU is present in subsequence D1, then :95a::BUYR must be present in another subsequence D1.
- If :95a::BUYR is present in subsequence D1, then :95a::REAG must be present in another subsequence D1.

Deliverers		Receivers	
DEI2	Deliverer's Intermediary 2	REI2	Receiver's Intermediary 2
DEI1	Deliverer's Intermediary 1	REI1	Receiver's Intermediary 1
DECU	Deliverer's Custodian	RECU	Receiver's Custodian
SELL	Seller (Deliverer)	BUYR	Buyer (Receiver)
DEAG	Delivering Agent	REAG	Receiving Agent

- C6** In subsequence D1, if field :95a::PSET is present, then field :97a:: is not allowed in the same subsequence. (Error code(s): E52).

Subsequence D1 if field :95a::PSET is ...	Subsequence D1 then field :97a:: is ...
Present	Not allowed within the same occurrence
Not present	Optional

- C7** In sequence C, if field :22H::BUSE//SWIT is present, then field :20C::PREV must be present in minimum one occurrence of subsequence A1 Linkages. (Error code(s): E53).

Sequence C if field :22H::BUSE//SWIT is ...	Then field :20C::PREV is ...
Present	Mandatory, that is, must be present in minimum one occurrence of A1
Not present	Optional

- C8** If field :22F::DBNM//VEND is present in sequence D, then a vendor must be specified; that is one occurrence of sequence E must contain field :95a::VEND (Error code(s): D71).

If sequence D is ...	And in sequence D if field :22F::DBNM// VEND is ... ⁽¹⁾	Then sequence E is ...	And in one occurrence of sequence E field :95a::VEND is ...
Present	Present	Mandatory that is sequence E must be present minimum once	Mandatory
	Not present	Optional	Optional
Not present	Not applicable	Optional	Optional

(1) if the Data Source Scheme is present in field :22F::DBNM//VEND then the conditional rule does not apply.

- C9** In sequence E, if field :95a::EXCH Stock Exchange or :95a::TRRE Trade Regulator is present, then field :97a:: is not allowed in the same sequence (Error code(s): E63).

Sequence E if field :95a::EXCH or TRRE is ...	Sequence E then field :97a:: is ...
Present	Not allowed within the same occurrence
Not present	Optional

- C10** If either Deal Price (field 90a::DEAL) or Original Ordered Quantity (field :36B::ORDR) (in sequence C), or Settlement Amount (field :19A::SETT) (in subsequence D3) are present more than once, then in sequence C Buy/Sell Indicator (field :22H::BUSE) must be present with Indicator code FPOO or IPOO or IPPO (Error code(s): E75).

Sequence C if field :90a::DEAL is ...	Sequence C if field :36B::ORDR is ...	Subsequence D3 if field :19A::SETT is ... ⁽¹⁾	Sequence C then field : 22H::BUSE ...
Present only once	Not present or present only once	Not present or present only once	May contain any Indicator code

	Present more than once	Not applicable	Indicator code must be FPOO or IPOO or IPPO
Present more than once	Not applicable	Not applicable	Indicator code must be FPOO or IPOO or IPPO

(1) Field :19A::SETT is not repetitive in subsequence D3, but subsequence D3 itself is repetitive.

- C11** In each occurrence of sequence B, field :94a::TRAD must not be present more than twice. When repeated, one and only one occurrence must be with format option L (:94L::TRAD) (Error code(s): E99).

In sequence C, field :94a::TRAD must not be present more than twice. When repeated, one and only one occurrence must be with format option L (:94L::TRAD) (Error code(s): E99).

In sequence C, field :94a::SAFE must not be present more than twice. When repeated, one and only one occurrence must be with format option L (:94L::SAFE) (Error code(s): E99).

In each occurrence of subsequence C1, field :95a::ALTE must not be present more than twice. When repeated, one and only one occurrence must be with format option L (:95L::ALTE) (Error code(s): E99).

In each occurrence of subsequence D1, field :95a::ALTE must not be present more than twice. When repeated, one and only one occurrence must be with format option L (:95L::ALTE) (Error code(s): E99).

In each occurrence of subsequence D2, field :95a::ALTE must not be present more than twice. When repeated, one and only one occurrence must be with format option L (:95L::ALTE) (Error code(s): E99).

In each occurrence of sequence E, field :95a::ALTE must not be present more than twice. When repeated, one and only one occurrence must be with format option L (:95L::ALTE) (Error code(s): E99).

- C12** In each occurrence of sequence E, if field :95a::ALTE is present with format option L, then field :95a::MEOR and field :95a::MERE must not be present in the same occurrence of the sequence (Error code(s): E88).

MT 515 Usage Rules

- When an instruction is sent to a party other than the original Receiver, this original Receiver is identified in the other parties sequence as :95a::MERE (Recipient of the Message).
- The underlying fund or client (:95a::INVE), must be present.
- When a broker is identified as a confirming party, the party capacity (:22F::TRCA) must be specified.
- When an ETC service provider transfers a message from one institution to another, and when the originator of the message is not already identified in the confirmation parties sequence or the settlement parties sequence, then the originating party is identified in the other parties sequence as :95a::MEOR (Originator of Message).
- In the case of a non-allocated trade, when an order to buy or sell was executed in several parts, normally one confirmation is sent for each day of execution. Where the confirmation is sent upon the final completion of the order, the executing party may show the partial trades, listing the dates, times, quantities and prices (partial fill sequence).
- The Receiver of a request to cancel must advise the requesting party that the request has been accepted or denied in an MT 509 Trade Status Message.

MT 515 Field Specifications

MT 515 - 1. Field 16R: Start of Block

Format

Option R

16c

Presence

Mandatory in mandatory sequence A

Definition

This field specifies the start of a block and the name of that block.

Codes

This field must contain the following code (Error code(s): T92):

GENL	General Information
------	---------------------

MT 515 - 2. Field 28E: Page Number/Continuation Indicator

Format

Option E	5n/4!c	(Page Number) (Continuation Indicator)
----------	--------	--

Presence

Optional in mandatory sequence A

Definition

This field provides the page number and a continuation indicator to indicate that the multi-parts confirmation is to continue or that the message is the last page of the multi-parts confirmation.

Codes

Continuation Indicator must contain one of the following codes (Error code(s): T97):

LAST	Last Page	Last page of a multi-parts confirmation with more than one page.
MORE	Intermediate Page	Intermediate page of a multi-parts confirmation which contains additional pages.
ONLY	Only Page	Only page of the confirmation.

MT 515 - 3. Field 20C: Reference: Sender's Message Reference

Format

Option C	:4!c//16x	(Qualifier) (Reference)
----------	-----------	-------------------------

Presence

Mandatory in mandatory sequence A

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	M	SEME	N		C	Sender's Message Reference

Definition

This qualified generic field specifies:

SEME	Sender's Message Reference	Reference assigned by the Sender to unambiguously identify the message.
------	----------------------------	---

Network Validated Rules

Reference must not start or end with a slash '/' and must not contain two consecutive slashes '/' (Error code(s): T26).

MT 515 - 4. Field 23G: Function of the Message

Format

Option G 4!c[/4!c] (Function) (Subfunction)

Presence

Mandatory in mandatory sequence A

Definition

This field identifies the function of the message.

Codes

Function must contain one of the following codes (Error code(s): T86):

CANC	Cancellation Request	Message requesting the cancellation of a previously sent message.
NEWM	New	New message.
PREA	Preadvice	Pre-advice the invoice of the trade at trade date. The pre-advice is not binding for settlement.

Codes

When present, Subfunction must contain one of the following codes (Error code(s): T85):

CODU	Copy Duplicate	Message is a copy to a party other than the account owner/account servicer, for information purposes and the message is a duplicate of a message previously sent.
COPY	Copy	Message is a copy to a party other than the account owner/account servicer, for information purposes.

DUPL Duplicate Message is for information/confirmation purposes. It is a duplicate of a message previously sent.

Usage Rules

To cancel a previously sent confirmation, Function is CANC. The reference in the linkage sequence must contain the Sender's reference of the message to be cancelled. A copy of at least the mandatory fields of the message to be cancelled must be present; optional fields need not be present for SWIFT validation.

Function PREA can only be used for the preadvice of confirmation of trades executed on markets where the client side trade confirmation is not considered final until the market side trade is settled. The use of PREA must be bilaterally agreed by the sender and the receiver.

MT 515 - 5. Field 98a: Date/Time: Preparation Date/Time

Format

Option A :4!c//8!n (Qualifier) (Date)
 Option C :4!c//8!n6!n (Qualifier) (Date) (Time)
 Option E :4!c//8!n6!n[,3n][/[N]2!n[2!n]] (Qualifier) (Date) (Time) (Decimals) (UTC Indicator)

Presence

Optional in mandatory sequence A

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	PREP	N		A, C, or E	Preparation Date/Time

Definition

This qualified generic field specifies:

PREP Preparation Date/ Time Date/time at which the message was prepared.

Network Validated Rules

Date must be a valid date expressed as YYYYMMDD (Error code(s): T50).

Time must be a valid time expressed as HHMMSS (Error code(s): T38).

UTC Indicator must be a valid time expressed as HH[MM] (Error code(s): T39).

Sign ([N]) must not be used when UTC Indicator is equal to all zeroes (Error code(s): T14).

Usage Rules

This field is provided for information only and is not binding on the parties, unless it has been assigned by a third party system.

MT 515 - 6. Field 22F: Indicator: Trade Transaction Type

Format

Option F :4!c/[8c]/4!c (Qualifier)(Data Source Scheme)
 (Indicator)

Presence

Mandatory in mandatory sequence A

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	M	TRTR	N		F	Trade Transaction Type

Definition

This qualified generic field specifies:

TRTR Trade Transaction Type Specifies the type of transaction of which the order is a component.

Codes

If Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

BASK	Basket Trade	Transaction is a single order to buy and sell several financial instruments for the purpose of simultaneous buying and selling. Baskets are often used for a set of 15 or more financial instruments and play a role in arbitrage activity.
EMTR	Employee Trade Reporting	Transaction relates to employee trade reporting.
INDX	Index Trade	Transaction is a single order to buy or sell all underlying financial instruments of an index, for example, S&P500.
LIST	List Trade	Transaction is a trade of a predetermined set of financial instruments.
PALL	Pre-Allocation	Transaction is a pre-allocation.
PROG	Program Trade	Transaction relates to computer-driven automatically executed trades in large volumes of a set of several financial instruments.
TRAD	Trade	Transaction is a regular trade.

Format B Number must contain the XML message identifier of the linked message.

MT 515 - 9. Field 20a: Reference

Format

Option C :4!c//16x (Qualifier) (Reference)
 Option U :4!c//52x (Qualifier) (UTI Reference)

Presence

Mandatory in mandatory subsequence A1

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	M	RELA	N		C	Related Message Reference
	or	PREV	N	C3, C7	C	Previous Message Reference
	or	MAST	N		C	Master Reference
	or	BASK	N		C	Basket Reference
	or	INDX	N		C	Index Reference
	or	LIST	N		C	List Reference
	or	PROG	N		C	Program Reference
	or	TRRF	N		C or U	Deal Reference
	or	COMM	N		C	Common Reference
	or	COLR	N		C	Collateral Reference
	or	ISSU	N		C	Issuer Reference
	or	BMRB	N		C	Block Matching Reference
	or	ALMR	N		C	Allocation Matching Reference

Definition

This qualified generic field specifies:

ALMR Allocation Matching Reference Reference of the linked message at the Detail/Allocation Level which identifies a centrally matched transaction.
 BASK Basket Reference Reference identifying a basket trade.

BMRB	Block Matching Reference	Reference of the linked message at the Trade/Block Level which identifies a centrally matched transaction.
COLR	Collateral Reference	Reference assigned to a collateral transaction linked to the settlement transaction.
COMM	Common Reference	Unique reference agreed upon by the two trade counterparties to identify the trade.
INDX	Index Reference	Reference identifying an index trade.
ISSU	Issuer Reference	Reference that an issuer attributes to a fund (funds industry).
LIST	List Reference	List reference which identifies a list trade.
MAST	Master Reference	Unique and unambiguous identifier used to link a group of individual transactions together.
PREV	Previous Message Reference	Message reference of the linked message which was previously sent.
PROG	Program Reference	Program reference which identifies a program trade.
RELA	Related Message Reference	Message reference of the linked message which was previously received.
TRRF	Deal Reference	Reference assigned to the trade by the Investment Manager OR the Broker/Dealer. This reference will be used throughout the trade life cycle to access/update the trade details.

Network Validated Rules

Reference must not start or end with a slash '/' and must not contain two consecutive slashes '/' (Error code(s): T26).

Usage Rules

MAST, BASK, INDX, LIST, PROG, COMM and ISSU references must not appear more than once in the message.

MT 515 - 10. Field 16S: End of Block

Format

Option S 16c

Presence

Mandatory in mandatory subsequence A1

Definition

This field specifies the end of a block and the name of that block.

Codes

This field must contain the following code (Error code(s): T92):

Option D :4!c//4!c/30d (Qualifier) (Quantity Type Code)
 (Quantity of Digital Tokens)

Presence

Mandatory in optional sequence B

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	M	PAFI	N		B or D	Quantity of Financial Instrument Partially Filled

Definition

This qualified generic field specifies:

PAFI	Quantity of Financial Instrument Partially Filled	Quantity of financial instruments of the partial purchase or sale being confirmed.
------	---	--

Codes

In option B, Quantity Type Code must contain one of the following codes (Error code(s): K36):

AMOR	Amortised Value	Quantity expressed as an amount representing the current amortised face amount of a bond, for example, a periodic reduction/increase of a bond's principal amount.
FAMT	Face Amount	Quantity expressed as an amount representing the face amount, that is, the principal, of a debt instrument.
UNIT	Unit Number	Quantity expressed as a number, for example, a number of shares.

Codes

In option D, Quantity Type Code must contain the following code (Error code(s): K36):

DITU	Digital Token Unit Number	Quantity of digital token expressed as a number, for example, a number of blockchain tokens.
------	---------------------------	--

Network Validated Rules

The integer part of Quantity must contain at least one digit. A decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).

Usage Rules

Format option D may only be used when the related account information in subsequence C1 field : 97D::BCAW is present.

MT 515 - 14. Field 90a: Price: Deal Price

Format

Option A	:4!c//4!c/[N]15d	(Qualifier) (Percentage Type Code) (Sign) (Price)
Option B	:4!c//4!c/3!a15d	(Qualifier) (Amount Type Code) (Currency Code) (Price)

Presence

Mandatory in optional sequence B

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	M	DEAL	N		A or B	Deal Price

Definition

This qualified generic field specifies:

DEAL Deal Price Price of the traded financial instrument.

Codes

In option A, Percentage Type Code must contain one of the following codes (Error code(s): K90):

DISC	Discount	Price expressed as the number of percentage points below par, for example, a discount price of 2.0% equals a price of 98 when par is 100.
PRCT	Percentage	Price expressed as a percentage of par.
PREM	Premium	Price expressed as the number of percentage points above par, for example, a premium price of 2.0% equals a price of 102 when par is 100.
YIEL	Yield	Price expressed as a yield.

Codes

In option B, Amount Type Code must contain one of the following codes (Error code(s): K90):

ACTU	Actual Amount	Price expressed as an amount of currency per unit or per share.

DRIP	Reinvestment of Proceeds	Reinvestment proceeds into securities.

Codes

In option F, if Qualifier is ECIO and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

EUSI	Capital Gain In	Capital gain is in the scope of the directive.
EUSO	Capital Gain Out	Capital gain is out of the scope of the directive.
UKWN	Unknown	Unknown whether capital gain is in or out of the scope of the directive.

Codes

In option F, if Qualifier is TSTA and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

TSIN	TIS Not Calculated	The fund is NOT calculating the taxable income per share within NAV.
TSIY	TIS Calculated	The fund is calculating the taxable income per share within NAV.
UKWN	Unknown	Unknown whether the fund is calculating the taxable income per share within NAV.

Codes

In option F, if Qualifier is YIEL and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

CALL	To Call	Transaction was effected at yield to call.
CURR	Current	Transaction was effected at current yield.
MATU	Maturity	Transaction was effected at yield to maturity.

Codes

If Qualifier is PRIR and Data Source Scheme is not present, Indicator must contain a numerical value in the range 0001 - 9999 where 0001 refers to the highest priority (Error code(s): K22).

Usage Rules

The qualifier CAOP is to be used for investment funds only, whereby the holder has the option to receive the distribution in cash or to reinvest in securities.

If field :22H::BUSE//SWIT is used, then in the linkage sequence reference must be made to the previous message sent and containing field :22H::BUSE//SWIF.

The qualifier BUSE, with codes SUBS, DIVR, REDM, CROF, CROT, SWIF and SWIT must only be used by institutions that are members of the Funds Closed User Group (CUG). Institutions that are not members of the Funds CUG and that send the MT 515 with any of the above codes will receive a NAK with error code G26.

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	TRCA	R		F	Party Capacity Indicator
2	O	INCA	N		F	Investor Capacity Indicator

Definition

This qualified generic field specifies:

INCA	Investor Capacity Indicator	Role of the investor in the transaction.
TRCA	Party Capacity Indicator	Specifies the role of the party in the transaction.

Codes

If Qualifier is TRCA and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

AGEN	Trading as Agent	Party is trading on behalf of his client.
BAGN	Acting as Agent for Customer and Other Person	Party is acting as an agent for both customer and another person.
CAGN	Crossing as Agent	Party is crossing on behalf of his client.
CPRN	Crossing as Principal	Party is crossing for his own account.
INFI	Investment Firm	Any legal person whose regular occupation or business is the provision of one or more investment services to third parties and/or the performance of one or more investment activities on a professional basis.
MKTM	Market Maker	Dealer or specialist that is trading for their own account in the OTC market. Market makers are expected to maintain an orderly market by being available to buy or sell.
MLTF	Multi-Lateral Trading Facility	Multilateral trading facility (MTF) is a multilateral system which brings together multiple third-party buying and selling interests in financial instruments in a way that results in a contract.
OAGN	Acting as Agent for Person Other than Customer	Party is acting as an agent for a person other than a customer.

PRAG	Acting as Agent for Some Executions and Principal	Party is acting as an agent for some executions and principal for others.
PRIN	Trading as Principal	Party is trading for his own account.
RISP	Acting as Riskless Principal	Party is trading as a riskless principal, that is, the order to buy (sell) has been simultaneously offset by an order to sell (buy) with another party.
RMKT	Regulated Market	A regulated market is a market on which financial instruments can be traded according to rules defined by the stock exchange.
SINT	Systematic Internaliser	Firms which, on an organised, frequent and systematic basis, deal on their own account by executing client orders outside a regulated market or an MTF. SIs have the obligation to provide, and make public, a definite bid and offer quote for liquid securities.
TAGT	Transfer Agent	The party appointed by the Fund Management Company. It updates records of investor accounts to reflect the daily investor purchases, redemptions, switches, transfers, and re-registrations. It ensures the timely settlement of transactions, and may provide tax information to the investor and/or to its intermediaries. It may calculate, collect, and rebate commissions. It prepares and distributes confirmations reflecting transactions, resulting in unit or cash account movements to the investor or the investor's intermediary. It responds to inquiries concerning account status, and processes the income distribution.

Codes

If Qualifier is INCA and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

ELIG	Eligible Counterparty	MiFID classification of counterparty. Eligible customers are the most sophisticated level of investor, able to opt out of some of the protections afforded by conduct of business rules defined under MiFID.
PROF	Professional Client	MiFID classification of counterparty. Professional customers are, for example, investment firms, credit institutions, insurance companies.
RETL	Retail Client	MiFID classification of counterparty. Retail customers are the least sophisticated level of investor.

Usage Rules

For Qualifier INCA, the use of the codes needs to be bilaterally agreed.

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	M	CONF	N		B or D	Quantity of Financial Instrument Confirmed
2	O	ORDR	R	C10	B or D	Quantity of Financial Instrument Ordered

Definition

This qualified generic field specifies:

CONF	Quantity of Financial Instrument Confirmed	Quantity of financial instrument confirmed.
ORDR	Quantity of Financial Instrument Ordered	Quantity of financial instrument requested by the client, to be traded on the market.

Codes

In option B, Quantity Type Code must contain one of the following codes (Error code(s): K36):

AMOR	Amortised Value	Quantity expressed as an amount representing the current amortised face amount of a bond, for example, a periodic reduction/increase of a bond's principal amount.
FAMT	Face Amount	Quantity expressed as an amount representing the face amount, that is, the principal, of a debt instrument.
UNIT	Unit Number	Quantity expressed as a number, for example, a number of shares.

Codes

In option D, Quantity Type Code must contain the following code (Error code(s): K36):

DITU	Digital Token Unit Number	Quantity of digital token expressed as a number, for example, a number of blockchain tokens.
------	---------------------------	--

Network Validated Rules

The integer part of Quantity must contain at least one digit. A decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).

Usage Rules

Format option D may only be used when the related account information in subsequence C1 field : 97D::BCAW is present.

MT 515 - 37. Field 35B: Identification of the Financial Instrument

Format

Option B	[ISIN!e12!c] [4*35x]	(Identification of Security) (Description of Security)
----------	-------------------------	---

Presence

Mandatory in mandatory sequence C

Definition

This field identifies the financial instrument.

Network Validated Rules

At least Identification of a Security (Subfield 1) or Description of Security (Subfield 2) must be present; both may be present (Error code(s): T17).

ISIN is used at the beginning of Identification of Security (Subfield 1) and must be composed of uppercase letters only (Error code(s): T12).

Usage Rules

When used in Description of Security (Subfield 2), codes must start and end with a slash '/'.

When an ISIN identifier is not used it is strongly recommended that one of the following codes be used as the first characters of the Description of Security (Subfield 2):

[/2!a/]	The ISO two-digit country code, followed by the national scheme number.
---------	---

- [/TS/] Followed by the ticker symbol.
- [/XX/] Bilaterally agreed or proprietary scheme which may be further identified by a code or short description identifying the scheme used.
- [/4!c/] Code identifying the type of security identifier used. This code must be one published by ISO 20022 (ExternalFinancialInstrumentIdentificationTypeCode).

It is strongly recommended that the ISIN be used.

MT 515 - 38. Field 16R: Start of Block

Format

Option R 16c

Presence

Mandatory in optional subsequence C2

Definition

This field specifies the start of a block and the name of that block.

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	PLIS	N		B	Place of Listing

Definition

This qualified generic field specifies:

PLIS Place of Listing Place where the referenced financial instrument is listed.

Codes

If Data Source Scheme is not present, Place Code must contain one of the following codes (Error code(s): T94):

EXCH Stock Exchange Place of listing is a stock exchange.

OTCO Over The Counter Place of listing is over the counter.

Network Validated Rules

Narrative must not start or end with a slash '/' and must not contain two consecutive slashes '/' (Error code(s): T26).

Usage Rules

Place of Listing is to be identified by its Market Identifier Code (MIC).

Example

:94B::PLIS//EXCH/XNYS

MT 515 - 40. Field 22F: Indicator

Format

Option F :4!c/[8c]/4!c (Qualifier)(Data Source Scheme)(Indicator)

Presence

Optional in optional subsequence C2

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	MICO	N		F	Method of Interest Computation Indicator
2	O	FORM	N		F	Form of Securities Indicator
3	O	PFRE	N		F	Payment Frequency Indicator
4	O	PAYS	N		F	Payment Status Indicator
5	O	CFRE	N		F	Variable Rate Change Frequency Indicator

Definition

This qualified generic field specifies:

CFRE	Variable Rate Change Frequency Indicator	Specifies the frequency of change to the variable rate of an interest bearing instrument.
FORM	Form of Securities Indicator	Specifies the form of the financial instrument.
MICO	Method of Interest Computation Indicator	Specifies the computation method of (accrued) interest of the financial instrument.
PAYS	Payment Status Indicator	Specifies the status of the payment of a financial instrument at a particular time, as agreed with the issuer.
PFRE	Payment Frequency Indicator	Specifies the frequency of a payment.

Codes

If Qualifier is MICO and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

A001	30/360 (ISDA) or 30/360 (American Basic Rule)	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February, and provided that the interest period started on a 30th or a 31st. This means that a 31st is assumed to be a 30th if the period started on a 30th or a 31st and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). It is the most commonly used 30/360 method for US straight and convertible bonds.
A002	30/365	Method whereby interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and a 365-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th).
A003	30/Actual	Method whereby interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and the assumed number of days in a year in a way similar to the Actual/Actual (ICMA). Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). The assumed number of days in a year is computed as the actual number of days in the coupon period multiplied by the number of interest payments in the year.
A004	Actual/360	Method whereby interest is calculated based on the actual number of accrued days in the interest period and a 360-day year.
A005	Actual/365 (Fixed)	Method whereby interest is calculated based on the actual number of accrued days in the interest period and a 365-day year.

A006	Actual/Actual (ICMA)	Method whereby interest is calculated based on the actual number of accrued days and the assumed number of days in a year, that is, the actual number of days in the coupon period multiplied by the number of interest payments in the year. If the coupon period is irregular (first or last coupon), it is extended or split into quasi interest periods that have the length of a regular coupon period and the computation is operated separately on each quasi interest period and the intermediate results are summed up.
A007	30E/360 or Eurobond basis	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be equivalent to a 30 Feb. However, if the last day of the maturity coupon period is the last day of February, it will not be assumed to be a 30th. It is a variation of the 30/360 (ICMA) method commonly used for eurobonds. The usage of this variation is only relevant when the coupon periods are scheduled to end on the last day of the month.
A008	Actual/Actual (ISDA)	Method whereby interest is calculated based on the actual number of accrued days of the interest period that fall on a normal year, divided by 365, added to the actual number of days of the interest period that fall on a leap year, divided by 366.
A009	Actual/365L or Actual/Actual (basic rule)	Method whereby interest is calculated based on the actual number of accrued days and a 365-day year (if the coupon payment date is NOT in a leap year) or a 366-day year (if the coupon payment date is in a leap year).
A010	Actual/Actual (AFB)	Method whereby interest is calculated based on the actual number of accrued days and a 366-day year (if 29 Feb falls in the coupon period) or a 365-day year (if 29 Feb does not fall in the coupon period). If a coupon period is longer than one year, it is split by repetitively separating full year sub-periods counting backwards from the end of the coupon period (a year backwards from a 28 Feb being 29 Feb, if it exists). The first of the sub-periods starts on the start date of the accrued interest period and thus is possibly shorter than a year. Then the interest computation is operated separately on each sub-period and the intermediate results are summed up.
A011	30/360 (ICMA) or 30/360 (basic rule)	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). It is the most commonly used 30/360 method for non-US straight and convertible bonds issued before 01/01/1999.

A012	30E2/360 or Eurobond basis model 2	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for the last day of February whose day of the month value shall be adapted to the value of the first day of the interest period if the latter is higher and if the period is one of a regular schedule. This means that a 31st is assumed to be a 30th and the 28th Feb of a non-leap year is assumed to be equivalent to a 29th Feb when the first day of the interest period is a 29th, or to a 30th Feb when the first day of the interest period is a 30th or a 31st. The 29th Feb of a leap year is assumed to be equivalent to a 30th Feb when the first day of the interest period is a 30th or a 31st. Similarly, if the coupon period starts on the last day of February, it is assumed to produce only one day of interest in February as if it was starting on a 30th Feb when the end of the period is a 30th or a 31st, or two days of interest in February when the end of the period is a 29th, or 3 days of interest in February when it is the 28th Feb of a non-leap year and the end of the period is before the 29th.
A013	30E3/360 or Eurobond basis model 3	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be equivalent to a 30 Feb. It is a variation of the 30E/360 (or Eurobond basis) method where the last day of February is always assumed to be a 30th, even if it is the last day of the maturity coupon period.
A014	Actual/365NL or Actual/365 No Leap	Method whereby interest is calculated based on the actual number of accrued days in the interest period, excluding any leap day from the count, and a 365-day year.
OTHR	Other	Other method than A001-A014. See Narrative.

Codes

If Qualifier is FORM and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

BEAR	Bearer Security	Financial instruments are in bearer form.
REGD	Registered Security	Financial instruments are in registered form.

MT 515 - 41. Field 12a: Type of Financial Instrument

Format

Option A	:4!c/[8c]/30x	(Qualifier) (Data Source Scheme) (Instrument Code or Description)
Option B	:4!c/[8c]/4!c	(Qualifier) (Data Source Scheme) (Instrument Type Code)
Option C	:4!c//6!c	(Qualifier) (CFI Code)

Presence

Optional in optional subsequence C2

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	CLAS	N		A or C	Classification Type
2	O	OPST	N		B	Option Style

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
3	O	OPTI	N		B	Option Type

Definition

This qualified generic field specifies:

CLAS	Classification Type	Classification type of the financial instrument, for example, ISO Classification of Financial instrument (CFI).
OPST	Option Style	Specifies how an option can be exercised.
OPTI	Option Type	Specifies whether it is a call option or a put option.

Codes

In option B, if Qualifier is OPST and Data Source Scheme is not present, Instrument Type Code must contain one of the following codes (Error code(s): K12):

AMER	American Style	Option can be exercised before or on expiry date.
EURO	European Style	Option can be exercised on expiry date only.

Codes

In option B, if Qualifier is OPTI and Data Source Scheme is not present, Instrument Type Code must contain one of the following codes (Error code(s): K12):

CALL	Call Option	A right to buy a defined quantity of an asset by a certain date at an agreed price.
PUTO	Put Option	A right to sell a defined quantity of an asset by a certain date at an agreed price.

Usage Rules

When option C is used, CFI Code must be a valid ISO CFI code.

To use the codes associated with the ISITC code for security type, /ASCT/, Data Source Scheme must be ISIT, and Instrument Code or Description must contain a valid ISITC security type code.

Example

:12C::CLAS//ESVUFR

(CFI code for equity, common share, voting rights, unrestricted, fully paid and registered).

6	O	DECL	N		A	Percentage of Debt Claims
7	O	INDX	N		A	Index Factor
8	O	YTMR	N		A	Yield To Maturity Rate

Definition

This qualified generic field specifies:

CUFC	Current Factor	Rate expressed as a decimal between 0 and 1 defining the outstanding principal of the financial instrument (for factored securities).
DECL	Percentage of Debt Claims	Percentage of the underlying assets of a fund that represents a debt, for example, in the context of the EU Savings directive.
INDX	Index Factor	Public index rate used for inflation adjustment.
INTR	Interest Rate	Annualised interest rate of a financial instrument used to calculate the actual interest rate of the coupon or the accrued interest.
NWFC	Next Factor	Rate expressed as a decimal between 0 and 1 that will be applicable as of the next factor date and defines the outstanding principal of the financial instrument (for factored securities).
NXRT	Next Interest Rate	Interest rate applicable to the next interest payment period in relation to variable rate instruments.
PRFC	Previous Factor	Rate expressed as a decimal between 0 and 1 that was applicable before the current factor and defines the outstanding principal of the financial instrument (for factored securities).
YTMR	Yield To Maturity Rate	Rate of return anticipated on a bond when held until maturity date.

Network Validated Rules

The integer part of Rate must contain at least one digit. A decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).

If Rate is zero, Sign must not be present (Error code(s): T14).

Usage Rules

Sign must be present when Rate is negative.

Except if notified differently in the rate definition, when used with format option A (:4!c//[N]15d), the rate must be expressed as a percentage, not as a decimal fraction (12% must be identified by 12, and not 0,12).

MT 515 - 45. Field 13a: Number Identification

2	O	POOL	N		B	Pool Number
3	O	LOTS	N		B	Lot Number
4	O	VERN	N		A or B	Version Number

Definition

This qualified generic field specifies:

COUP	Coupon Number	Number of the next coupon attached/associated with a security.
LOTS	Lot Number	Number identifying a lot constituting the financial instrument.
POOL	Pool Number	Number identifying a group of underlying assets assigned by the issuer of a factored security.
VERN	Version Number	Version number of the option contract or tranche of the related financial instrument.

Network Validated Rules

Number (Format Option B) must not start or end with a slash '/' and must not contain two consecutive slashes '//' (Error code(s): T26).

MT 515 - 46. Field 17B: Flag

Format

Option B :4!c//1!a (Qualifier) (Flag)

Presence

8	O	WRTS	N		B	Warrants Attached on Delivery Flag
9	O	YIEL	N		B	Yield Variance Flag
	or	ODDC	N		B	Odd Coupon Flag

Definition

This qualified generic field specifies:

CALL	Callable Flag	Indicates whether the issuer has the right to repay the financial instrument prior to maturity.
CONV	Convertible Flag	Indicates whether the financial instrument is convertible into another type of financial instrument.
COVE	Covered Flag	Indicates whether the underlying financial instrument of an option is owned by the writer of the option.

FRNF	Floating Rate Note Flag	Indicates whether the interest rate of an interest bearing instrument is reset periodically.
ODDC	Odd Coupon Flag	Indicates whether the payment of the coupon (interest) on an interest bearing instrument is off the normal schedule.
PUTT	Puttable Flag	Indicates whether the holder has the right to ask for redemption of the financial instrument prior to final maturity.
RATE	Rated Instrument Flag	Indicates whether the instrument is rated by a nationally recognized statistical rating organisation.
REDM	Redemption Affecting Yield Flag	Indicates whether, in the case of a debt security subject to redemption before maturity, such redemption could affect the yield.
WRTS	Warrants Attached on Delivery Flag	Indicates whether the warrants on a financial instrument (which has been traded cum warrants) will be attached on delivery.
YIEL	Yield Variance Flag	Indicates whether the actual yield of an asset-backed security may vary according to the rate at which the underlying receivables or other financial assets are prepaid.

Codes

Flag must contain one of the following codes (Error code(s): K17):

N	No	No.
Y	Yes	Yes.

MT 515 - 47. Field 90a: Price

Format

Option A	:4!c//4!c/[N]15d	(Qualifier) (Percentage Type Code) (Sign) (Price)
Option B	:4!c//4!c/3!a15d	(Qualifier) (Amount Type Code) (Currency Code) (Price)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
2	O	EXER	N		A or B	Exercise Price
3	O	TSMT	N		B	Taxable Income Per Share

Definition

This qualified generic field specifies:

EXER	Exercise Price	<ol style="list-style-type: none"> Price at which the security will be purchased/sold if warrant is exercised, represented either as an actual amount (option B) or a percentage (option A). Price at which a bond is converted, represented either as an actual amount (option B) or a percentage (option A). Strike price of an option, represented either as an actual amount (option B) or a percentage (option A).
INDC	Indicative Price	Estimated price, for example, for valuation purposes.
MRKT	Market Price	Last reported/known price of a financial instrument in a market.
TSMT	Taxable Income Per Share	Amount included in the NAV that corresponds, per share, to gains directly or indirectly derived from interest payments, for example, in the context of the EU Savings directive.

Codes

In option A, Percentage Type Code must contain one of the following codes (Error code(s): K90):

DISC	Discount	Price expressed as the number of percentage points below par, for example, a discount price of 2.0% equals a price of 98 when par is 100.
PRCT	Percentage	Price expressed as a percentage of par.
PREM	Premium	Price expressed as the number of percentage points above par, for example, a premium price of 2.0% equals a price of 102 when par is 100.
YIEL	Yield	Price expressed as a yield.

Codes

In option B, Amount Type Code must contain one of the following codes (Error code(s): K90):

ACTU	Actual Amount	Price expressed as an amount of currency per unit or per share.
DISC	Discount	Price expressed as a discount amount.
PREM	Premium	Price expressed as a premium.

Network Validated Rules

Currency Code must be a valid ISO 4217 currency code (Error code(s): T52).

The integer part of Price must contain at least one digit. A decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).

Sign may only be present if Percentage Type Code is YIEL (Error code(s): T69).

If Price is zero, Sign must not be present (Error code(s): T14).

Usage Rules

The number of decimal digits in Price is not validated against the currency specified.

Sign must be present when Price is negative.

MT 515 - 48. Field 36a: Quantity of Financial Instrument

Format

Option B :4!c//4!c/15d (Qualifier) (Quantity Type Code)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	MINO	N		B or D	Minimum Nominal Quantity
2	O	SIZE	N		B or D	Contract Size
3	O	ORGV	N		B or D	Original Face Amount

Definition

This qualified generic field specifies:

MINO	Minimum Nominal Quantity	Minimum nominal quantity of financial instrument.
ORGV	Original Face Amount	Original par or nominal value of a financial instrument.
SIZE	Contract Size	Ratio or multiplying factor used to convert one contract into a financial instrument quantity.

Codes

In option B, if Qualifier is MINO or Qualifier is SIZE, Quantity Type Code must contain one of the following codes (Error code(s): K36):

AMOR	Amortised Value	Quantity expressed as an amount representing the current amortised face amount of a bond, for example, a periodic reduction/increase of a bond's principal amount.
FAMT	Face Amount	Quantity expressed as an amount representing the face amount, that is, the principal, of a debt instrument.
UNIT	Unit Number	Quantity expressed as a number, for example, a number of shares.

Codes

In option D, Quantity Type Code must contain the following code (Error code(s): K36):

DITU	Digital Token Unit Number	Quantity of digital token expressed as a number, for example, a number of blockchain tokens.
------	---------------------------	--

Codes

In option B, if Qualifier is ORGV, Quantity Type Code must contain the following code (Error code(s): K36):

FAMT	Face Amount	Quantity expressed as an amount representing the face amount, that is, the principal, of a debt instrument.
------	-------------	---

Network Validated Rules

The integer part of Quantity must contain at least one digit. A decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).

Usage Rules

Format option D may only be used when the related account information in subsequence C1 field : 97D::BCAW is present.

MT 515 - 49. Field 35B: Identification of the Financial Instrument

Format

Option B	[ISIN!e12!c] [4*35x]	(Identification of Security) (Description of Security)
----------	-------------------------	---

Presence

Optional in optional subsequence C2

Definition

This field identifies the underlying financial instrument.

Network Validated Rules

At least Identification of a Security (Subfield 1) or Description of Security (Subfield 2) must be present; both may be present (Error code(s): T17).

ISIN is used at the beginning of Identification of Security (Subfield 1) and must be composed of uppercase letters only (Error code(s): T12).

Usage Rules

The financial Instrument field 35B in the Financial Instrument Attributes subsequence must only be used for the identification of the underlying instrument(s) of a derivative. It must not be used, for example, for the listing of the underlying securities of an index.

When used in Description of Security (Subfield 2), codes must start and end with a slash '/'.

When an ISIN identifier is not used it is strongly recommended that one of the following codes be used as the first characters of the Description of Security (Subfield 2):

[/2!a/]	The ISO two-digit country code, followed by the national scheme number.
[/TS/]	Followed by the ticker symbol.
[/XX/]	Bilaterally agreed or proprietary scheme which may be further identified by a code or short description identifying the scheme used.
[/4!c/]	Code identifying the type of security identifier used. This code must be one published by ISO 20022 (ExternalFinancialInstrumentIdentificationTypeCode).

It is strongly recommended that the ISIN be used.

Example

An ISIN will be identified as follows:

:35B:ISIN US0123456704

A SEDOL will be identified as follows:

:35B:/GB/0123456

A CUSIP will be identified as follows:

:35B:/US/012345670

A proprietary scheme will be identified as follows:

:35B:/XX/SCHEMEUSED 0123456700

If Qualifier is LEOG and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

NLEG	Letter of Guarantee Not Accepted	Letter of guarantee is not accepted. If there is a standing instruction in place to accept a letter of guarantee, then this standing instruction is to be ignored.
YLEG	Letter of Guarantee Accepted	Letter of guarantee is accepted. If there is a standing instruction in place not to accept a letter of guarantee, then this standing instruction is to be ignored.

Codes

If Qualifier is SETS and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

NSET	Default Settlement System/Method	Settle through the default settlement system/method. If there is a standing instruction in place for settlement through the alternate settlement system/method, then this standing instruction is to be ignored.
YSET	Alternate Settlement System/Method	Settle through the alternate settlement system/method. If there is a standing instruction in place for settlement through the default settlement system/method, then this standing instruction is to be ignored.

Codes

If Qualifier is REPT and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

CADJ	Swap/Substitution	Relates to a repo collateral substitution.
CALL	Repo Call	Relates to the early closing/maturity date for a term repo or the termination date of an open repo with underlying collateral.
PAIR	Pair-Off	Relates to a repo that is part of a pair-off.
RATE	Repo Rate	Relates to a change in the repo rate.
ROLP	Repo Contract Rollover	Relates to a repo rollover of a contract extending the closing or maturity date without impacting underlying collateral.
TOPU	Top-Up	Relates to a cover of securities position due to deficit of collateral following mark to market valuation.
WTHD	Withdrawal	Relates to a return of securities position due to excess of collateral following mark to market valuation.

Codes

If Qualifier is STAM, the Data Source Scheme must be used to indicate the stamp duty type or exemption reason, for example, in the United Kingdom and Ireland (CRST), in South Africa (STRA), etc.

Usage Rules

The conditions of the use of the codes for the qualifiers BENE, CASY, DBNM, LEOG, REGT, REPT, RTGS, SETS and STCO must be pre-agreed between account owner and account servicer.

When the code YREG in the registration indicator is present, additional registration details must be specified in the registration details narrative in the Settlement Parties sequence unless already available at the account servicer via standing instruction/SLA.

The cash settlement system codes are to be used only by agents directly involved in the settlement process, such as local settlement agents, CSD's and central banks.

The use of settlement transaction type codes CONV, ISSU, REAL, RELE, NETT, NSYN, MKUP, MKDW, SYND is governed by the existence of a bilateral agreement.

Format

Option B :4!c//3!a/3!a/15d (Qualifier) (First Currency Code)
 (Second Currency Code) (Rate)

Presence

Optional in optional subsequence D3

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	EXCH	N	C1	B	Exchange Rate

Definition

This qualified generic field specifies:

EXCH Exchange Rate Exchange rate between the amount and the resulting amount.

Network Validated Rules

First Currency Code and Second Currency Code must be valid ISO 4217 currency codes (Error code(s): T52).

The integer part of Rate must contain at least one digit. A decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).

Usage Rules

The order of the two currencies specified here is independent of the currencies in the amount and resulting amount fields. Therefore the exchange rate can be expressed as a reciprocal if required.

For the calculation of the rate itself, the First Currency Code will be the base currency and the Second Currency Code will be the quoted currency (1,00 of First Currency Code = [Rate] of Second Currency Code).

Example

The exchange rate between US Dollars and Pounds Sterling can be shown as:

:92B::EXCH//GBP/USD/1,619 (1,00 GBP = 1,619 USD)

or as

:92B::EXCH//USD/GBP/0,618 (1,00 USD = 0,618 GBP)

2	O	ALTE	R	C11, C12	L or S	Alternate Identification

Definition

This qualified generic field specifies:

ALTE	Alternate Identification	Alternate identification for a party.
------	--------------------------	---------------------------------------

EXCH	Stock Exchange	Party that identifies the stock exchange.
INPA	Interested Party	Party that receives information from other parties about transactions that are being processed, and performs functions such as regulatory oversight and accounting.
MEOR	Originator of Message	Party that originated the message, if other than the Sender.
MERE	Recipient of Message	Party that is the final destination of the message, if other than the Receiver.
TRAG	Triparty Agent	Party that handles tri-party transactions.
TRRE	Trade Regulator	Party that identifies the trade regulator.
VEND	Vendor	Vendor of the Settlement Standing Instruction database requested to be consulted through sequence D field 22F::DBNM//VEND.

Codes

In option S, if Qualifier is ALTE and Data Source Scheme is not present, Type of ID must contain one of the following codes (Error code(s): K95):

ARNU	Alien Registration Number	Number assigned by a government agency to identify foreign nationals.
CCPT	Passport Number	Number assigned by a passport authority.
CHTY	Tax Exempt Identification Number	Number assigned to a tax exempt entity.
CORP	Corporate Identification	Number assigned to a corporate entity.
DRLC	Driver's Licence Number	Number assigned to a driver's licence.
FIIN	Foreign Investment Identity Number	Number assigned to a foreign investor (other than the alien number).
TXID	Tax Identification Number	Number assigned by a tax authority to an entity.

Network Validated Rules

Country Code must be a valid ISO country code (Error code(s): T73).

Identifier Code must be a registered BIC (Error code(s): T27, T28, T29, T45).

Proprietary code (Format Option R), Alternate ID (Format Option S) and Name and Address (Format Option Q) must not start or end with a slash '/' and must not contain two consecutive slashes '//'. For field formats with more than 1 line, the rule applies for each line (Error code(s): T26).

Usage Rules

In option R, Proprietary Code specifies a local national code or market segment code identifying the party.

In option S:

- Type of ID specifies the type of alternate identification that can be used to give an alternate identification of the party identified in this sequence.
- Country Code specifies the country for which the alternate identification is relevant.
- Alternate ID specifies an alternate identification of the party identified in this sequence.

If Qualifier is RERT and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

FIXE	Fixed	Rate is fixed.
FORF	Forfeit	No specific rate applies to the transaction, only a forfeit.
VARI	Variable	Rate is variable.

Codes

If Qualifier is MICO and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

A001	30/360 (ISDA) or 30/360 (American Basic Rule)	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February, and provided that the interest period started on a 30th or a 31st. This means that a 31st is assumed to be a 30th if the period started on a 30th or a 31st and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). It is the most commonly used 30/360 method for US straight and convertible bonds.
A002	30/365	Method whereby interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and a 365-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th).
A003	30/Actual	Method whereby interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and the assumed number of days in a year in a way similar to the Actual/Actual (ICMA). Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). The assumed number of days in a year is computed as the actual number of days in the coupon period multiplied by the number of interest payments in the year.
A004	Actual/360	Method whereby interest is calculated based on the actual number of accrued days in the interest period and a 360-day year.
A005	Actual/365 (Fixed)	Method whereby interest is calculated based on the actual number of accrued days in the interest period and a 365-day year.

A006	Actual/Actual (ICMA)	Method whereby interest is calculated based on the actual number of accrued days and the assumed number of days in a year, that is, the actual number of days in the coupon period multiplied by the number of interest payments in the year. If the coupon period is irregular (first or last coupon), it is extended or split into quasi interest periods that have the length of a regular coupon period and the computation is operated separately on each quasi interest period and the intermediate results are summed up.
A007	30E/360 or Eurobond basis	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be equivalent to a 30 Feb. However, if the last day of the maturity coupon period is the last day of February, it will not be assumed to be a 30th. It is a variation of the 30/360 (ICMA) method commonly used for eurobonds. The usage of this variation is only relevant when the coupon periods are scheduled to end on the last day of the month.
A008	Actual/Actual (ISDA)	Method whereby interest is calculated based on the actual number of accrued days of the interest period that fall on a normal year, divided by 365, added to the actual number of days of the interest period that fall on a leap year, divided by 366.
A009	Actual/365L or Actual/Actual (basic rule)	Method whereby interest is calculated based on the actual number of accrued days and a 365-day year (if the coupon payment date is NOT in a leap year) or a 366-day year (if the coupon payment date is in a leap year).
A010	Actual/Actual (AFB)	Method whereby interest is calculated based on the actual number of accrued days and a 366-day year (if 29 Feb falls in the coupon period) or a 365-day year (if 29 Feb does not fall in the coupon period). If a coupon period is longer than one year, it is split by repetitively separating full year sub-periods counting backwards from the end of the coupon period (a year backwards from a 28 Feb being 29 Feb, if it exists). The first of the sub-periods starts on the start date of the accrued interest period and thus is possibly shorter than a year. Then the interest computation is operated separately on each sub-period and the intermediate results are summed up.
A011	30/360 (ICMA) or 30/360 (basic rule)	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). It is the most commonly used 30/360 method for non-US straight and convertible bonds issued before 01/01/1999.

A012	30E2/360 or Eurobond basis model 2	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for the last day of February whose day of the month value shall be adapted to the value of the first day of the interest period if the latter is higher and if the period is one of a regular schedule. This means that a 31st is assumed to be a 30th and the 28th Feb of a non-leap year is assumed to be equivalent to a 29th Feb when the first day of the interest period is a 29th, or to a 30th Feb when the first day of the interest period is a 30th or a 31st. The 29th Feb of a leap year is assumed to be equivalent to a 30th Feb when the first day of the interest period is a 30th or a 31st. Similarly, if the coupon period starts on the last day of February, it is assumed to produce only one day of interest in February as if it was starting on a 30th Feb when the end of the period is a 30th or a 31st, or two days of interest in February when the end of the period is a 29th, or 3 days of interest in February when it is the 28th Feb of a non-leap year and the end of the period is before the 29th.
A013	30E3/360 or Eurobond basis model 3	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be equivalent to a 30 Feb. It is a variation of the 30E/360 (or Eurobond basis) method where the last day of February is always assumed to be a 30th, even if it is the last day of the maturity coupon period.
A014	Actual/365NL or Actual/365 No Leap	Method whereby interest is calculated based on the actual number of accrued days in the interest period, excluding any leap day from the count, and a 365-day year.
OTHR	Other	Other method than A001-A014. See Narrative.

PRIC	Pricing Rate	Interest rate to be paid on the transaction amount, as agreed between the counterparties.
REPO	Repurchase Rate	Repurchase rate used to calculate the repurchase amount.
RSPR	Spread Rate	Margin over or under an index that determines the repurchase rate.
SHAI	Securities Haircut	Haircut or valuation factor on the security expressed as a percentage.
SLMG	Stock Loan Margin	Percentage mark-up on a loan consideration used to reflect the lender's risk.
VASU	Variable Rate Support	Index or support rate used together with the spread to calculate the repurchase rate.

Network Validated Rules

The integer part of Rate must contain at least one digit. A decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).

If Rate is zero, Sign must not be present (Error code(s): T14).

Usage Rules

In option C, Rate Name specifies the reference rate or basis rate on which a variable rate is based (ex: EONIA, EURIBOR, LIBOR, FEFUND, EURREPO).

Sign must be present when Rate is negative.

Except if notified differently in the rate definition, when used with format option A (:4!c//[N]15d), the rate must be expressed as a percentage, not as a decimal fraction (12% must be identified by 12, and not 0,12).

Definition

This qualified generic field specifies:

ACRU	Accrued Interest Amount	Amount of interest that has been accrued in between two periods (for second leg).
DEAL	Deal Amount	Principal amount of a trade (for second leg).
FORF	Forfeit Amount	Fixed amount of money that has to be paid (instead of interest) in the case of a recall or at the closing date.
REPP	Premium Amount	Difference between the amount of money of the first leg and the amount of the second leg of the transaction.
TAPC	Termination Amount per Piece of Collateral	Amount of money to be settled per piece of collateral to terminate the transaction.
TRTE	Termination Transaction Amount	Total amount of money to be settled to terminate the transaction.

Network Validated Rules

The integer part of Amount must contain at least one digit. A decimal comma is mandatory and is included in the maximum length. The number of digits following the comma must not exceed the maximum allowed for the specified currency (Error code(s): C03, T40, T43).

Currency Code must be a valid ISO 4217 currency code (Error code(s): T52).

MT 516 Scope

This message type is sent from one financial institution to another, both of which are involved in the lending of securities.

It is used to confirm the details of:

- a new securities loan
- a partial recall of securities previously out on loan
- a partial return of securities previously out on loan
- the close-out of a securities loan.

MT 516 Network Validated Rules

- C1** Either field 35A or 35N must be present (Error code(s): C07).
- C2** In sequence A, either field 83C or 87a, but not both, may be present (Error code(s): C67).

MT 516 Usage Rules

- The details of a securities loan or its recall or return are usually agreed by the two parties via telephone or other means.
- The confirmation of a recall or return must contain in field 35N the quantity of securities recalled or returned and in field 35A the remaining quantity of securities out on loan.
 Alternatively, if the practice is to close-out a loan in the event of a partial return or partial recall, fields 35A and 35N must be equal.

- Adjustments to the collateral amount must not be conveyed by this message. The MT 581 must be used to request or confirm adjustments to the collateral amount.
- The cancellation of this message must be conveyed using the MT 592 Request for Cancellation.
To amend or correct a securities loan confirmation, it is necessary to cancel the original message and send a new confirmation message.

Usage Rules

This field must contain the contents of field 20 Transaction Reference Number of a previous MT 516 or 526 General Securities Lending/Borrowing Message.

The content of field 21 will normally be a reference meaningful to the Sender rather than the Receiver. This is because the Sender will normally include the content of field 20 from the MT 516 previously transmitted rather than received.

MT 516 - 3. Field 23: Further Identification

Format

16x

Must be formatted as:

6!a/6!a (Code) (Function)

Presence

Mandatory in mandatory sequence A

Definition

This field further identifies the transaction, whether borrowing or lending and if a new loan, recall or return.

Codes

Code indicates whether the Sender is lending or borrowing the securities using one of the following codes:

BORROW The Sender is acting as a borrower of securities.

LENDER The Sender is acting as a lender of securities.

Codes

Function indicates the function of the message, using one of the following codes, preceded by a single slash '/':

NEWLON Confirmation of a new loan.

RECALL Confirmation of a request for a partial recall. This code may only be used when Code contains BORROW.

RETURN Confirmation of a notice of a partial return. This code may only be used when Code contains LENDER.

MT 516 - 4. Field 31P: Date Loan/Recall/Return Agreed

Format

Option P 6!n[29x] (Date) (Place)

Presence

Mandatory in mandatory sequence A

Definition

This field specifies the date on which the loan, the recall or the return was agreed.

Network Validated Rules

Date must be a valid date expressed as YYYYMMDD (Error code(s): T50).

Usage Rules

Place may be used to specify where the loan was agreed, from the Sender's viewpoint.

MT 516 - 5. Field 83C: Safekeeping Account

Format

Option C /34x (Account)

Presence

Conditional (see rule C2) in mandatory sequence A

Definition

This field specifies the safekeeping account from/to which securities are to be delivered/received.

Usage Rules

This field is used when there is a direct account relationship between the Sender and Receiver which is to be used.

MT 516 - 6. Field 35B: Identification of Securities

Format

Option B [ISIN!e12!c] (Identification of Security)
 [4*35x] (Description of Security)

Presence

Mandatory in mandatory sequence A

Definition

This field identifies the securities lent or borrowed by the Sender or being recalled or returned.

Network Validated Rules

At least Identification of a Security (Subfield 1) or Description of Security (Subfield 2) must be present; both may be present (Error code(s): T17).

ISIN is used at the beginning of Identification of Security (Subfield 1) and must be composed of uppercase letters only (Error code(s): T12).

Usage Rules

When used in Description of Security (Subfield 2), codes must start and end with a slash '/'.

When an ISIN identifier is not used it is strongly recommended that one of the following codes be used as the first characters of the Description of Security (Subfield 2):

[/2!a] The ISO two-digit country code, followed by the national scheme number.

[/TS/]	Followed by the ticker symbol.
[/XX/]	Bilaterally agreed or proprietary scheme which may be further identified by a code or short description identifying the scheme used.
[/4!c/]	Code identifying the type of security identifier used. This code must be one published by ISO 20022 (ExternalFinancialInstrumentIdentificationTypeCode).

It is strongly recommended that the ISIN be used.

MT 516 - 7. Field 35A: Quantity of Securities

Format

Option A 3!a15d (Type) (Quantity)

Presence

Conditional (see rule C1) in mandatory sequence A

Definition

This field contains a specification of the type of securities, followed by the quantity of securities lent or borrowed by the Sender, that is, field 23 contains the code NEWLON, or remaining on loan following a recall or return, that is, field 23 contains the code RECALL or RETURN.

Codes

Type must contain one of the following codes (Error code(s): T58):

BON	Bonds (when not traded by face amount)
CER	Representative Certificates
CPN	Coupons
FMT	Face or Principal or Nominal Amount
MSC	Miscellaneous
OPC	Option Contracts
OPS	Option Shares
PRC	Premium Contracts
PRS	Premium Shares
RTE	Rentes
RTS	Rights
SHS	Shares
UNT	Units, for example, consisting of a bond and a warrant

WTS Warrants

Network Validated Rules

The integer part of Quantity must contain at least one digit. A decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).

MT 516 - 8. Field 31L: Payable Date

Format

Option L 6!n (Date)

Presence

Optional in mandatory sequence A

Definition

This field specifies the date on which income to be derived from the securities on loan is payable.

Network Validated Rules

Date must be a valid date expressed as YYMMDD (Error code(s): T50).

MT 516 - 9. Field 31X: Ex Date

Format

Option X [6!n[4!n]][7!a] (Date) (Time) (Code)

Presence

Optional in mandatory sequence A

Definition

This field specifies the first day, and optionally the time, on which any transaction related to the securities on loan is contracted without entitlement to any event related to the securities.

Codes

If the ex date is unknown, the following code must be used in Code (Error code(s): T57):

UNKNOWN Ex date is unknown

Network Validated Rules

Date must be a valid date expressed as YYMMDD (Error code(s): T50).

Time must be a valid time expressed as HHMM (Error code(s): T38).

Either Date and Time, or Code, but not both, must be present (Error code(s): T62).

MT 516 - 10. Field 30: Effective Date

Format

6!n (Date)

Presence

Mandatory in mandatory sequence A

Definition

This field specifies the date either on which the securities loan will be effective or on which the securities on loan are to be recalled or have been returned.

Network Validated Rules

Date must be a valid date expressed as YYMMDD (Error code(s): T50).

Usage Rules

This field specifies the date on which the securities loan will be effective, when Function of field 23 consists of NEWLON.

It specifies the date on which the securities on loan are to be recalled or returned or have been returned, when Function of field 23 consists of the code RECALL or RETURN.

MT 516 - 11. Field 31F: Expiry and Option Date of Loan

Format

Option F 6!n[/6!n][//35x] (Date) (Period Date) (Period Details)

Presence

Optional in mandatory sequence A

Definition

This field specifies the expiry date or the option period of the loan and, optionally other details concerning the loan period.

Network Validated Rules

Date and Period Date must be valid dates expressed as YYMMDD (Error code(s): T50).

Usage Rules

Date specifies the effective end date of the loan. Period Date specifies the date from which the securities loaned may be recalled by the Lender. Period Details may be used to specify other details concerning the loan period.

MT 516 - 12. Field 87a: Receiver/Deliverer of Securities

Format

Option A [/1!a][/34x] (Party Identifier)
4!a2!a2!c[3!c] (Identifier Code)

Option D [/!a] [/34x] (Party Identifier)
 4*35x (Name and Address)

Presence

Conditional (see rule C2) in mandatory sequence A

Definition

This field identifies the receiver or deliverer of securities on loan.

Network Validated Rules

Identifier Code must be a registered BIC (Error code(s): T27, T28, T29, T45).

Usage Rules

When field 23 contains BORROW, this field identifies either where the Sender wishes the securities to be received, that is, field 23 consists of BORROW/NEWLON, or where the Sender will deliver the securities, that is, field 23 consists of BORROW/RETURN or BORROW/RECALL, when different from the Receiver.

When field 23 contains LENDER, this field identifies either from where the Sender will deliver the securities, that is, field 23 consists of LENDER/NEWLON, or where the Sender wishes to receive the securities, that is, field 23 consists of LENDER/RECALL or LENDER/RETURN, when different from the Receiver.

MT 516 - 13. Field 35N: Quantity of Securities Recalled/Returned

Format

Option N 3!a15d (Type) (Quantity)

Presence

Conditional (see rule C1) in mandatory sequence A

Definition

This field contains a specification of the type of securities, followed by the quantity of securities being requested for recall or notified of its return.

Codes

Type must contain one of the following codes (Error code(s): T58):

- BON Bonds (when not traded by face amount)
- CER Representative Certificates
- CPN Coupons
- FMT Face or Principal or Nominal Amount
- MSC Miscellaneous
- OPC Option Contracts
- OPS Option Shares

PRC	Premium Contracts
PRS	Premium Shares
RTE	Rentes
RTS	Rights
SHS	Shares
UNT	Units, for example, consisting of a bond and a warrant
WTS	Warrants

Network Validated Rules

The integer part of Quantity must contain at least one digit. A decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).

Usage Rules

This field must be present when field 23 contains the code RECALL or RETURN and must not be present when field 23 contains the code NEWLON.

The code used in Type must be the same as that used in Type of field 35A.

MT 516 - 14. Field 33T: Market Price of Securities

Format

Option T 3!a15d (Currency) (Price)

Presence

Optional in mandatory sequence A

Definition

This field specifies the currency and price per unit of the securities lent, borrowed, recalled or returned as evaluated on the date the loan, recall or return was agreed, for example, field 31P.

Network Validated Rules

Currency must be a valid ISO 4217 currency code or the code PCT, YLD or REN (Error code(s): T52).

The integer part of Price must contain at least one digit. A decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).

Usage Rules

The number of decimal digits in Price is not validated against the currency specified.

This information along with that in fields 33S and 35A is the basis for calculating the amount of collateral required.

When the market price is expressed as a yield price, YLD may be used in Currency.

When the market price is expressed as a percentage or a revenue, the codes PCT or REN may be used.

In all cases, only the presence of the decimal comma will be validated.

MT 516 - 15. Field 37J: Interest Rate on Securities

Format

Option J 12d (Rate)

Presence

Optional in optional sequence B

Definition

This field specifies the interest rate to be paid by the borrower on the market value of the securities on loan.

Network Validated Rules

The integer part of Rate must contain at least one digit. A decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).

MT 516 - 16. Field 26H: Collateral Type

Format

Option H 16x

Presence

Optional in optional sequence B

Definition

This field specifies the type of collateral used in the securities loan.

Codes

One of the following codes must be used:

CASHCOLL	Collateral in the form of cash.
EXISTING	Collateral is already provided for under an existing agreement.
LETTCOLL	Collateral in the form of a letter of credit or guarantee.
OTHECOLL	Collateral in a form other than cash, letter of credit/guarantee or securities or mixed.
SECUCOLL	Collateral in the form of securities.

Usage Rules

When the code OTHECOLL is used, further details of the collateral arrangement must be specified in field 77D Special Terms and Conditions.

This field should normally be present when field 23 contains the code NEWLON to specify the collateral arrangement.

This field must be present when field 26H contains the code CASHCOLL or LETTCOLL and may be present when field 26H contains the code OTHCOLL or EXISTING.

MT 516 - 19. Field 37a: Rebate Agreed

Format

Option A	12d[//6!n1!a3n][/16x]	(Rate) (End Date) (Period) (Number) (Information)
Option B	12d[//6!n1!a3n][/16x]	(Rate) (End Date) (Period) (Number) (Information)
Option C	12d[//6!n1!a3n][/16x]	(Rate) (End Date) (Period) (Number) (Information)
Option D	12d[//6!n1!a3n][/16x]	(Rate) (End Date) (Period) (Number) (Information)
Option E	12d[//6!n1!a3n][/16x]	(Rate) (End Date) (Period) (Number) (Information)
Option F	12d[//6!n1!a3n][/16x]	(Rate) (End Date) (Period) (Number) (Information)

Presence

Optional in optional sequence B

Definition

This field specifies the interest rate of the rebate agreed on the cash collateral. It specifies the interest rate and the method to be used in the calculation of the interest amount.

For all option letters:

- End Date specifies the last day of the first interest period
- Period specifies the period between payments
- Number specifies the number of days or months between interest payments

The option letter specifies the method of interest computation as follows:

Tag option	Month of	Year of
A	30 days	360 days
B	28-31 days	360 days
C	28-31 days	365/6 days
D	30 days	365/6 days
E	28-31 days	365 days
F	30 days	365 days

Codes

In option A or B or C or D or E or F, Period, when present, must contain one of the following codes (Error code(s): T61):

D	Number of Days
M	Number of Months

Network Validated Rules

End Date must be a valid date expressed as YYMMDD (Error code(s): T50).

The integer part of Rate must contain at least one digit. A decimal comma is mandatory and is included in the maximum length. (Error code(s): T40, T43).

MT 516 - 20. Field 57a: Account With Institution

Format

Option A	[/1!a] [/34x] 4!a2!a2!c [3!c]	(Party Identifier) (Identifier Code)
Option B	[/1!a] [/34x] [35x]	(Party Identifier) (Location)
Option D	[/1!a] [/34x] 4*35x	(Party Identifier) (Name and Address)

Presence

Optional in optional sequence B

Definition

This field identifies the financial institution which will pay or credit the lender of the securities on loan, or the borrower.

Network Validated Rules

Identifier Code must be a registered BIC (Error code(s): T27, T28, T29, T45).

Identifier Code must be a financial institution BIC. This error code applies to all types of BICs referenced in a FIN message including connected BICs, non-connected BICs, Masters, Synonyms, Live destinations and Test & Training destinations (Error code(s): C05).

Usage Rules

When field 23 contains NEWLON or RECALL, this field identifies the financial institution which will pay or credit the lender of the securities on loan.

When field 23 contains RETURN, this field identifies the financial institution which will pay or credit the borrower of the securities.

This field may only be present when the collateral is in the form of cash, for example, field 26H contains CASHCOLL, LETTCOLL or OTHCOLL.

If field 26H contains LETTCOLL, this field may be used to identify the advice through bank.

MT 516 - 21. Field 35S: Quantity of Securities Transferred as Collateral

Format

Option S 3!a15d (Type) (Quantity)

Presence

Optional in optional sequence B

Definition

This field contains a specification of the type of securities, followed by the quantity of securities being requested or transferred as collateral.

Codes

Type must contain one of the following codes (Error code(s): T58):

BON	Bonds (when not traded by face amount)
CER	Representative Certificates
CPN	Coupons
FMT	Face or Principal or Nominal Amount
MSC	Miscellaneous
OPC	Option Contracts
OPS	Option Shares
PRC	Premium Contracts
PRS	Premium Shares
RTE	Rentes
RTS	Rights
SHS	Shares
UNT	Units, for example, consisting of a bond and a warrant
WTS	Warrants

Network Validated Rules

The integer part of Quantity must contain at least one digit. A decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).

Usage Rules

This field may only be present when the collateral is in the form of securities, for example, field 26H contains SECUCOLL, OTHCOLL or EXISTING.

MT 516 - 22. Field 35B: Identification of Securities

Format

Option B	[ISIN!e12!c] [4*35x]	(Identification of Security) (Description of Security)
----------	-------------------------	---

Presence

Optional in optional sequence B

Definition

This field identifies the securities being requested or transferred as collateral.

Network Validated Rules

At least Identification of a Security (Subfield 1) or Description of Security (Subfield 2) must be present; both may be present (Error code(s): T17).

ISIN is used at the beginning of Identification of Security (Subfield 1) and must be composed of uppercase letters only (Error code(s): T12).

Usage Rules

This field may only be present when the collateral is in the form of securities, for example, field 26H contains SECUCOLL, OTHCOLL or EXISTING.

When used in Description of Security (Subfield 2), codes must start and end with a slash '/'.

When an ISIN identifier is not used it is strongly recommended that one of the following codes be used as the first characters of the Description of Security (Subfield 2):

[/2!a]	The ISO two-digit country code, followed by the national scheme number.
[/TS]	Followed by the ticker symbol.
[/XX]	Bilaterally agreed or proprietary scheme which may be further identified by a code or short description identifying the scheme used.
[/4!c]	Code identifying the type of security identifier used. This code must be one published by ISO 20022 (ExternalFinancialInstrumentIdentificationTypeCode).

It is strongly recommended that the ISIN be used.

MT 516 - 23. Field 87a: Receiver/Deliverer of Securities

Format

Option A	[/1!a] [/34x] 4!a2!a2!c [3!c]	(Party Identifier) (Identifier Code)
Option D	[/1!a] [/34x] 4*35x	(Party Identifier) (Name and Address)

Presence

Optional in optional sequence B

Definition

This field identifies the financial institution which will receive securities used as collateral.

Network Validated Rules

Identifier Code must be a registered BIC (Error code(s): T27, T28, T29, T45).

Usage Rules

When field 23 contains NEWLON, this field identifies the financial institution which will receive securities used as collateral, on behalf of the lender of the securities on loan.

When field 23 contains RETURN or RECALL, this field identifies the financial institution which will receive securities used as collateral, on behalf of the borrower of the securities on loan.

This field may only be present in those cases where the collateral is in the form of securities, for example, field 26H contains SECUCOLL, OTHCOLL or EXISTING.

MT 516 - 24. Field 77D: Special Terms and Conditions

Format

Option D 6*35x (Narrative)

Presence

Optional in optional sequence C

Definition

This field contains additional information about terms and conditions of the securities loan or its recall or return.

Codes

One or more of the following codes may be used, placed between slashes ('/'), followed by the necessary information:

- | | |
|--------|--|
| COLL | Used to indicate the type of collateral used in those cases where field 26H contains OTHCOLL, LETTCOLL or EXISTING. |
| CUM | Used to indicate that the securities lent are cum coupon or dividend. |
| DIVREQ | Used to indicate the percentage of the gross dividend that the beneficial owner will receive and is to return to the lender. The percentage amount, that is, 15d, to be returned to the lender should follow the code. |
| EX | Used to indicate that the securities lent are ex coupon or dividend. |

MT 516 - 25. Field 72: Sender to Receiver Information

Format

6*35x (Narrative)

In addition to narrative text, structured text with the following line formats may be used:

Line 1	/8c/[additional information]	(Code) (Narrative)
Lines 2-6	[//continuation of additional information] or [8c/[additional information]]	(Narrative) or (Code) (Narrative)

Presence

Optional in optional sequence C

Definition

This field is used to provide additional information about the securities loan.

Codes

One or more of the following codes may be used in Code when field 23 contains RETURN or RECALL, and may be followed by further information relative to the request to recall or notice of return:

COMPLETE	Used to confirm a partial recall or return of securities out on loan which represents the final recall or return or complete close-out.
PARTIAL	Used to confirm the partial recall or return of securities out on loan.

Usage Rules

The structured format may be used for bilaterally agreed codes.

Codes must be between slashes and must appear at the beginning of a line.

Narrative text must not begin with a slash and, if used, must begin on a new line and be the last information in the field.

Additional explanatory information, which may be continued on the next lines, is preceded by a double slash '//'.

MT 516 Examples

Narrative

On 3 November 2002, Pierson, Heldring en Pierson, Amsterdam, announces, via an MT 526 sent to a set of potential borrowers with which they have long established working relationships, that it has specified securities available for lending.

Upon receipt of the MT 526, Goldman, Sachs & Co., New York, requests by phone to borrow 1000 shares of Siemens (ISIN DE0007236002). It is agreed on the same day that the shares are to be delivered on 6 November to Goldman, Sachs' securities clearance account at Citibank, AG, Frankfurt, backed up by cash collateral in DEM of 105 percent of the value of the securities currently valued at 650 DEM per share.

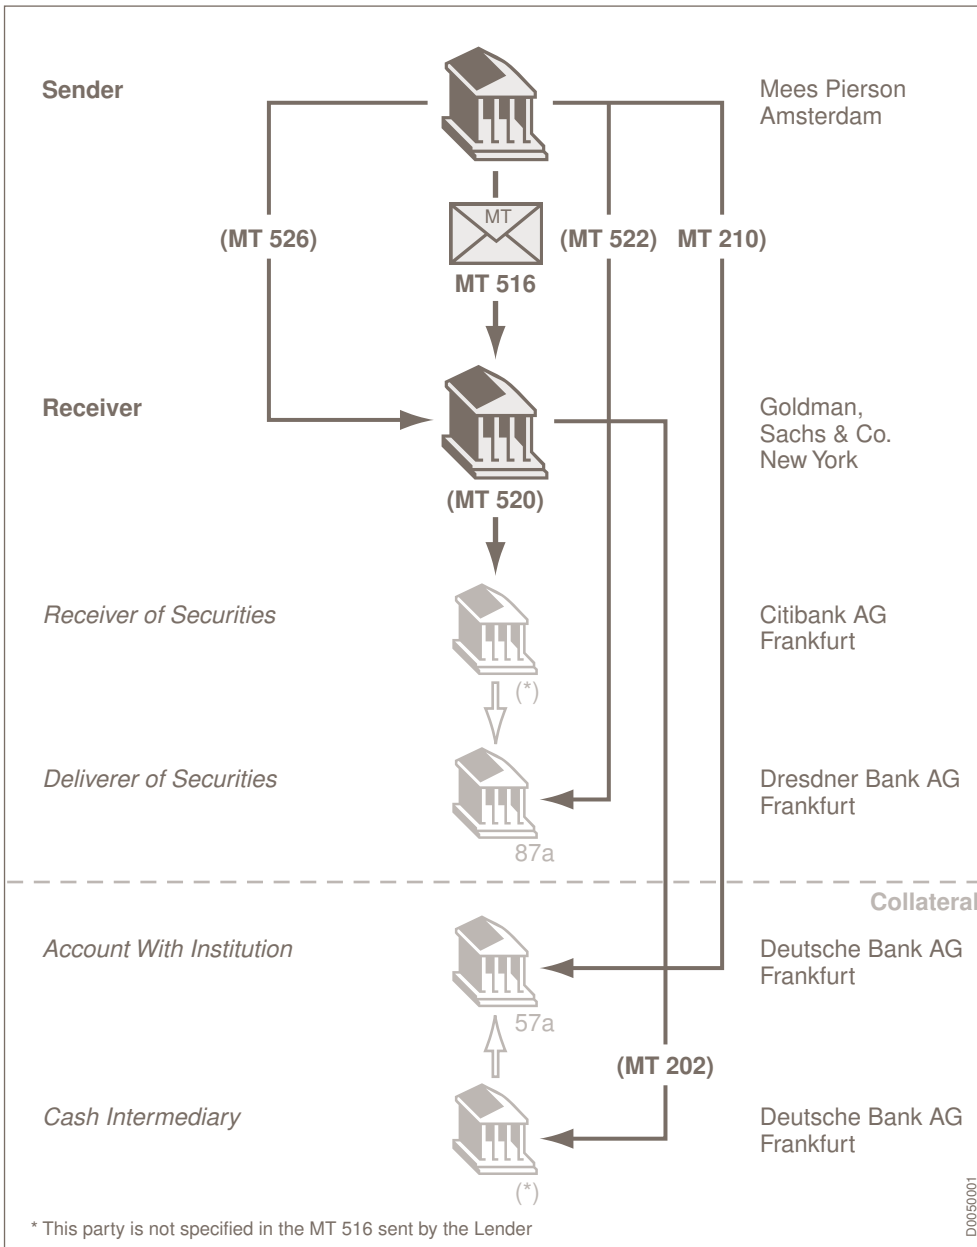

It is also agreed that the cash collateral will be deposited in Pierson, Heldring en Pierson's DEM account at Deutsche Bank AG, Frankfurt.

Finally, it is agreed that Pierson, Heldring en Pierson will pay Goldman, Sachs & Co. rebate interest of 4.75 percent on the cash collateral provided by the latter. (Since payment of the rebate will be done through the normal monthly securities lending billing process, this part of the operation is not shown.)

On 3 November 2002, Pierson, Heldring en Pierson 1) confirms to Goldman, Sachs & Co. the securities loan using the MT 516, 2) instructs its German sub-custodian, Dresdner Bank AG, Frankfurt, to deliver free the loaned securities to Citibank AG, Frankfurt, the German sub-custodian for Goldman, Sachs & Co. (using the MT 542) and 3) notifies its German correspondent bank, Deutsche Bank AG, to receive the cash collateral (using the MT 210).

Similarly, Goldman, Sachs & Co. 1) instructs its German sub-custodian, Citibank AG, Frankfurt (using the MT 540) to receive free the borrowed securities and 2) instructs its correspondent bank, Dresdner AG, Frankfurt, to transfer the cash collateral in DEM to Deutsche Bank, Frankfurt (using the MT 202).

MT 517 Trade Confirmation Affirmation

MT 517 Scope

This message is sent by an instructing party, for example, client, or its authorised representative, to a financial institution which had previously sent a trade confirmation/contract note, for example, broker-dealer.

This message is used to positively affirm the details of a previously received confirmation/contract note. This message binds the Sender and the Receiver of the message to the trade details contained in the confirmation being affirmed.

This message may be sent directly between the parties to the trade or via an ETC service provider.

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	M	SEME	N		C	Sender's Message Reference

Definition

This qualified generic field specifies:

SEME Sender's Message Reference assigned by the Sender to unambiguously identify the message.

Network Validated Rules

Reference must not start or end with a slash '/' and must not contain two consecutive slashes '/' (Error code(s): T26).

MT 517 - 3. Field 23G: Function of the Message

Format

Option G 4!c[/4!c] (Function) (Subfunction)

Presence

Mandatory (referenced in rules C1 and C2) in mandatory sequence A

Definition

This field identifies the function of the message.

Codes

Function must contain the following code (Error code(s): T86):

CANC	Cancellation Request	Message requesting the cancellation of a previously sent message.
NEWM	New	New message.

Codes

Subfunction, when present, must contain one of the following codes (Error code(s): T85):

CODU	Copy Duplicate	Message is a copy to a party other than the account owner/account servicer, for information purposes and the message is a duplicate of a message previously sent.
COPY	Copy	Message is a copy to a party other than the account owner/account servicer, for information purposes.
DUPL	Duplicate	Message is for information/confirmation purposes. It is a duplicate of a message previously sent.

Usage Rules

The function CANC must only be used by the Depository Trust Company (USA) to cancel same day affirmations. This is for audit purposes only and does not cancel the trade itself.

To cancel a previously sent message, Function is CANC. The reference in the linkages sequence must contain the Sender's reference of the message to be cancelled. A copy of at least the mandatory fields of the message to be cancelled must be present; optional fields need not be present for SWIFT validation.

GENL General Information

MT 518 Market-Side Securities Trade Confirmation

MT 518 Scope

This message is sent by an executing party to its trade counterparty.

It is used to confirm the details of a trade.

It may also be used to:

- request the cancellation of a previously sent confirmation
- re-send a confirmation previously sent
- provide a third party with a copy of the message (be it the confirmation or request for cancellation) being sent.

This message may include, where necessary, the settlement details of the trade.

The market confirmation may be:

- exchanged directly or via an ETC service provider between two trade counterparties for mutual comparison of the trade details
- sent by one trade party to allege the trade against its counterparty, either directly or via an ETC service provider.

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	M	CONF	N		B or D	Quantity of Financial Instrument Confirmed

Definition

This qualified generic field specifies:

CONF	Quantity of Financial Instrument Confirmed	Quantity of financial instrument confirmed.
------	--	---

Codes

In option B, Quantity Type Code must contain one of the following codes (Error code(s): K36):

AMOR	Amortised Value	Quantity expressed as an amount representing the current amortised face amount of a bond, for example, a periodic reduction/increase of a bond's principal amount.
FAMT	Face Amount	Quantity expressed as an amount representing the face amount, that is, the principal, of a debt instrument.
UNIT	Unit Number	Quantity expressed as a number, for example, a number of shares.

Codes

In option D, Quantity Type Code must contain the following code (Error code(s): K36):

DITU	Digital Token Unit Number	Quantity of digital token expressed as a number, for example, a number of blockchain tokens.
------	---------------------------	--

Network Validated Rules

The integer part of Quantity must contain at least one digit. A decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).

Usage Rules

Format option D may only be used when the related account information in subsequence B1 field : 97D::BCAW is present.

MT 518 - 32. Field 22F: Indicator

Format

Option F :4!c/[8c]/4!c (Qualifier) (Data Source Scheme) (Indicator)

Presence

Optional in optional subsequence B2

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	MICO	N		F	Method of Interest Computation Indicator
2	O	FORM	N		F	Form of Securities Indicator
3	O	PFRE	N		F	Payment Frequency Indicator
4	O	PAYS	N		F	Payment Status Indicator
5	O	CFRE	N		F	Variable Rate Change Frequency Indicator

Definition

This qualified generic field specifies:

CFRE	Variable Rate Change Frequency Indicator	Specifies the frequency of change to the variable rate of an interest bearing instrument.
FORM	Form of Securities Indicator	Specifies the form of the financial instrument.
MICO	Method of Interest Computation Indicator	Specifies the computation method of (accrued) interest of the financial instrument.
PAYS	Payment Status Indicator	Specifies the status of the payment of a financial instrument at a particular time, as agreed with the issuer.
PFRE	Payment Frequency Indicator	Specifies the frequency of a payment.

Codes

If Qualifier is MICO and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

A001	30/360 (ISDA) or 30/360 (American Basic Rule)	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February, and provided that the interest period started on a 30th or a 31st. This means that a 31st is assumed to be a 30th if the period started on a 30th or a 31st and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). It is the most commonly used 30/360 method for US straight and convertible bonds.
------	---	---

A002	30/365	Method whereby interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and a 365-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th).
A003	30/Actual	Method whereby interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and the assumed number of days in a year in a way similar to the Actual/Actual (ICMA). Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). The assumed number of days in a year is computed as the actual number of days in the coupon period multiplied by the number of interest payments in the year.
A004	Actual/360	Method whereby interest is calculated based on the actual number of accrued days in the interest period and a 360-day year.
A005	Actual/365 (Fixed)	Method whereby interest is calculated based on the actual number of accrued days in the interest period and a 365-day year.
A006	Actual/Actual (ICMA)	Method whereby interest is calculated based on the actual number of accrued days and the assumed number of days in a year, that is, the actual number of days in the coupon period multiplied by the number of interest payments in the year. If the coupon period is irregular (first or last coupon), it is extended or split into quasi interest periods that have the length of a regular coupon period and the computation is operated separately on each quasi interest period and the intermediate results are summed up.
A007	30E/360 or Eurobond basis	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be equivalent to a 30 Feb. However, if the last day of the maturity coupon period is the last day of February, it will not be assumed to be a 30th. It is a variation of the 30/360 (ICMA) method commonly used for eurobonds. The usage of this variation is only relevant when the coupon periods are scheduled to end on the last day of the month.
A008	Actual/Actual (ISDA)	Method whereby interest is calculated based on the actual number of accrued days of the interest period that fall on a normal year, divided by 365, added to the actual number of days of the interest period that fall on a leap year, divided by 366.
A009	Actual/365L or Actual/Actual (basic rule)	Method whereby interest is calculated based on the actual number of accrued days and a 365-day year (if the coupon payment date is NOT in a leap year) or a 366-day year (if the coupon payment date is in a leap year).

A010	Actual/Actual (AFB)	Method whereby interest is calculated based on the actual number of accrued days and a 366-day year (if 29 Feb falls in the coupon period) or a 365-day year (if 29 Feb does not fall in the coupon period). If a coupon period is longer than one year, it is split by repetitively separating full year sub-periods counting backwards from the end of the coupon period (a year backwards from a 28 Feb being 29 Feb, if it exists). The first of the sub-periods starts on the start date of the accrued interest period and thus is possibly shorter than a year. Then the interest computation is operated separately on each sub-period and the intermediate results are summed up.
A011	30/360 (ICMA) or 30/360 (basic rule)	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). It is the most commonly used 30/360 method for non-US straight and convertible bonds issued before 01/01/1999.
A012	30E2/360 or Eurobond basis model 2	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for the last day of February whose day of the month value shall be adapted to the value of the first day of the interest period if the latter is higher and if the period is one of a regular schedule. This means that a 31st is assumed to be a 30th and the 28th Feb of a non-leap year is assumed to be equivalent to a 29th Feb when the first day of the interest period is a 29th, or to a 30th Feb when the first day of the interest period is a 30th or a 31st. The 29th Feb of a leap year is assumed to be equivalent to a 30th Feb when the first day of the interest period is a 30th or a 31st. Similarly, if the coupon period starts on the last day of February, it is assumed to produce only one day of interest in February as if it was starting on a 30th Feb when the end of the period is a 30th or a 31st, or two days of interest in February when the end of the period is a 29th, or 3 days of interest in February when it is the 28th Feb of a non-leap year and the end of the period is before the 29th.
A013	30E3/360 or Eurobond basis model 3	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be equivalent to a 30 Feb. It is a variation of the 30E/360 (or Eurobond basis) method where the last day of February is always assumed to be a 30th, even if it is the last day of the maturity coupon period.
A014	Actual/365NL or Actual/365 No Leap	Method whereby interest is calculated based on the actual number of accrued days in the interest period, excluding any leap day from the count, and a 365-day year.
OTHR	Other	Other method than A001-A014. See Narrative.

Codes

If Qualifier is FORM and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

BEAR	Bearer Security	Financial instruments are in bearer form.
REGD	Registered Security	Financial instruments are in registered form.

6	O	INDX	N		A	Index Factor
7	O	YTMR	N		A	Yield To Maturity Rate

Definition

This qualified generic field specifies:

CUFC	Current Factor	Rate expressed as a decimal between 0 and 1 defining the outstanding principal of the financial instrument (for factored securities).
INDX	Index Factor	Public index rate used for inflation adjustment.
INTR	Interest Rate	Annualised interest rate of a financial instrument used to calculate the actual interest rate of the coupon or the accrued interest.
NWFC	Next Factor	Rate expressed as a decimal between 0 and 1 that will be applicable as of the next factor date and defines the outstanding principal of the financial instrument (for factored securities).

NXRT	Next Interest Rate	Interest rate applicable to the next interest payment period in relation to variable rate instruments.
PRFC	Previous Factor	Rate expressed as a decimal between 0 and 1 that was applicable before the current factor and defines the outstanding principal of the financial instrument (for factored securities).
YTMR	Yield To Maturity Rate	Rate of return anticipated on a bond when held until maturity date.

Network Validated Rules

The integer part of Rate must contain at least one digit. A decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).

If Rate is zero, Sign must not be present (Error code(s): T14).

Usage Rules

Sign must be present when Rate is negative.

Except if notified differently in the rate definition, when used with format option A (:4!c/[N]15d), the rate must be expressed as a percentage, not as a decimal fraction (12% must be identified by 12, and not 0,12).

1	O	MINO	N		B or D	Minimum Nominal Quantity
2	O	SIZE	N		B or D	Contract Size
3	O	ORGV	N		B or D	Original Face Amount

Definition

This qualified generic field specifies:

MINO	Minimum Nominal Quantity	Minimum nominal quantity of financial instrument.
ORGV	Original Face Amount	Original par or nominal value of a financial instrument.
SIZE	Contract Size	Ratio or multiplying factor used to convert one contract into a financial instrument quantity.

Codes

In option B, if Qualifier is MINO or Qualifier is SIZE, Quantity Type Code must contain one of the following codes (Error code(s): K36):

AMOR	Amortised Value	Quantity expressed as an amount representing the current amortised face amount of a bond, for example, a periodic reduction/increase of a bond's principal amount.
FAMT	Face Amount	Quantity expressed as an amount representing the face amount, that is, the principal, of a debt instrument.
UNIT	Unit Number	Quantity expressed as a number, for example, a number of shares.

Codes

In option D, Quantity Type Code must contain the following code (Error code(s): K36):

DITU	Digital Token Unit Number	Quantity of digital token expressed as a number, for example, a number of blockchain tokens.
------	---------------------------	--

Codes

In option B, if Qualifier is ORGV, Quantity Type Code must contain the following code (Error code(s): K36):

FAMT	Face Amount	Quantity expressed as an amount representing the face amount, that is, the principal, of a debt instrument.
------	-------------	---

Network Validated Rules

The integer part of Quantity must contain at least one digit. A decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).

Usage Rules

Format option D may only be used when the related account information in subsequence B1 field : 97D::BCAW is present.

MT 518 - 41. Field 35B: Identification of the Financial Instrument

Format

Option B	[ISIN!e12!c] [4*35x]	(Identification of Security) (Description of Security)
----------	-------------------------	---

Presence

Optional in optional subsequence B2

Definition

This field identifies the underlying financial instrument.

Network Validated Rules

At least Identification of a Security (Subfield 1) or Description of Security (Subfield 2) must be present; both may be present (Error code(s): T17).

ISIN is used at the beginning of Identification of Security (Subfield 1) and must be composed of uppercase letters only (Error code(s): T12).

Usage Rules

The financial Instrument field 35B in the Financial Instrument Attributes subsequence must only be used for the identification of the underlying instrument(s) of a derivative. It must not be used, for example, for the listing of the underlying securities of an index.

When used in Description of Security (Subfield 2), codes must start and end with a slash '/'.

When an ISIN identifier is not used it is strongly recommended that one of the following codes be used as the first characters of the Description of Security (Subfield 2):

[/2!a/]	The ISO two-digit country code, followed by the national scheme number.
---------	---

- [/TS/] Followed by the ticker symbol.
- [/XX/] Bilaterally agreed or proprietary scheme which may be further identified by a code or short description identifying the scheme used.
- [/4!c/] Code identifying the type of security identifier used. This code must be one published by ISO 20022 (ExternalFinancialInstrumentIdentificationTypeCode).

It is strongly recommended that the ISIN be used.

Example

An ISIN will be identified as follows:

:35B:ISIN US0123456704

A SEDOL will be identified as follows:

:35B:/GB/0123456

A CUSIP will be identified as follows:

:35B:/US/012345670

A proprietary scheme will be identified as follows:

:35B:/XX/SCHEMEUSED 0123456700

Network Validated Rules

Country Code must be a valid ISO country code (Error code(s): T73).

Identifier Code must be a registered BIC (Error code(s): T27, T28, T29, T45).

Proprietary code (Format Option R), Alternate ID (Format Option S) and Name and Address (Format Option Q) must not start or end with a slash '/' and must not contain two consecutive slashes '//'. For field formats with more than 1 line, the rule applies for each line (Error code(s): T26).

Usage Rules

In option R, Proprietary Code specifies a local national code or market segment code identifying the party.

In option C, Country Code specifies in physical settlement transactions the country of settlement. This allows the custodian to direct instructions to a local agent in the country of settlement.

In option S:

- Type of ID specifies the type of alternate identification that can be used to give an alternate identification of the party identified in this sequence.
- Country Code specifies the country for which the alternate identification is relevant.
- Alternate ID specifies an alternate identification of the party identified in this sequence.

The qualifiers used to identify the parties do not specify the business role of the parties but their position in the settlement chain and the relationship which the parties have with one another.

Further explanations and examples are available in the [Category 5 Securities Markets Message Usage Guidelines](#).

Network Validated Rules

Currency Code must be a valid ISO 4217 currency code (Error code(s): T52).

The integer part of Amount must contain at least one digit. A decimal comma is mandatory and is included in the maximum length. The number of digits following the comma must not exceed the maximum allowed for the specified currency (Error code(s): C03, T40, T43).

If Amount is zero, Sign must not be present (Error code(s): T14).

Usage Rules

Sign is used when the Amount is credited while the practice or the transaction type would normally imply that the Amount should be debited (or vice versa).

MT 518 - 67. Field 98a: Date/Time: Value Date/Time

Format

Option A	:4!c//8!n	(Qualifier) (Date)
Option C	:4!c//8!n6!n	(Qualifier) (Date) (Time)

The integer part of Rate must contain at least one digit. A decimal comma is mandatory and is included in the maximum length (Error code(s): T40, T43).

Usage Rules

The order of the two currencies specified here is independent of the currencies in the amount and resulting amount fields. Therefore the exchange rate can be expressed as a reciprocal if required.

For the calculation of the rate itself, the First Currency Code will be the base currency and the Second Currency Code will be the quoted currency (1,00 of First Currency Code = [Rate] of Second Currency Code).

Example

The exchange rate between US dollars and Pounds Sterling can be shown as:

:92B::EXCH//GBP/USD/1,619 (1,00 GBP = 1,619 USD)

or as

:92B::EXCH//USD/GBP/0,618 (1,00 USD = 0,618 GBP)

Qualifier

(Error code(s): T89)

Order	M/O	Qualifier	R/N	CR	Options	Qualifier Description
1	O	RERT	N		F	Rate Type
2	O	MICO	N		F	Method of Interest Computation Indicator
3	O	REVA	N		F	Revaluation Indicator
4	O	LEGA	N		F	Legal Framework Indicator

Definition

This qualified generic field specifies:

LEGA	Legal Framework Indicator	Legal framework of the transaction.
MICO	Method of Interest Computation Indicator	Specifies the computation method of (accrued) interest of the financial instrument.
RERT	Rate Type	Specifies whether the rate is fixed or variable.
REVA	Revaluation Indicator	Specifies whether the collateral position should be subject to automatic revaluation by the account servicer.

Codes

If Qualifier is RERT and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

FIXE	Fixed	Rate is fixed.
FORF	Forfeit	No specific rate applies to the transaction, only a forfeit.
VARI	Variable	Rate is variable.

Codes

If Qualifier is MICO and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

A001	30/360 (ISDA) or 30/360 (American Basic Rule)	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February, and provided that the interest period started on a 30th or a 31st. This means that a 31st is assumed to be a 30th if the period started on a 30th or a 31st and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). It is the most commonly used 30/360 method for US straight and convertible bonds.
A002	30/365	Method whereby interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and a 365-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th).
A003	30/Actual	Method whereby interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and the assumed number of days in a year in a way similar to the Actual/Actual (ICMA). Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). The assumed number of days in a year is computed as the actual number of days in the coupon period multiplied by the number of interest payments in the year.
A004	Actual/360	Method whereby interest is calculated based on the actual number of accrued days in the interest period and a 360-day year.
A005	Actual/365 (Fixed)	Method whereby interest is calculated based on the actual number of accrued days in the interest period and a 365-day year.
A006	Actual/Actual (ICMA)	Method whereby interest is calculated based on the actual number of accrued days and the assumed number of days in a year, that is, the actual number of days in the coupon period multiplied by the number of interest payments in the year. If the coupon period is irregular (first or last coupon), it is extended or split into quasi interest periods that have the length of a regular coupon period and the computation is operated separately on each quasi interest period and the intermediate results are summed up.
A007	30E/360 or Eurobond basis	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be equivalent to a 30 Feb. However, if the last day of the maturity coupon period is the last day of February, it will not be assumed to be a 30th. It is a variation of the 30/360 (ICMA) method commonly used for eurobonds. The usage of this variation is only relevant when the coupon periods are scheduled to end on the last day of the month.
A008	Actual/Actual (ISDA)	Method whereby interest is calculated based on the actual number of accrued days of the interest period that fall on a normal year, divided by 365, added to the actual number of days of the interest period that fall on a leap year, divided by 366.

A009	Actual/365L or Actual/Actual (basic rule)	Method whereby interest is calculated based on the actual number of accrued days and a 365-day year (if the coupon payment date is NOT in a leap year) or a 366-day year (if the coupon payment date is in a leap year).
A010	Actual/Actual (AFB)	Method whereby interest is calculated based on the actual number of accrued days and a 366-day year (if 29 Feb falls in the coupon period) or a 365-day year (if 29 Feb does not fall in the coupon period). If a coupon period is longer than one year, it is split by repetitively separating full year sub-periods counting backwards from the end of the coupon period (a year backwards from a 28 Feb being 29 Feb, if it exists). The first of the sub-periods starts on the start date of the accrued interest period and thus is possibly shorter than a year. Then the interest computation is operated separately on each sub-period and the intermediate results are summed up.
A011	30/360 (ICMA) or 30/360 (basic rule)	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be a 28th (or 29th). It is the most commonly used 30/360 method for non-US straight and convertible bonds issued before 01/01/1999.
A012	30E2/360 or Eurobond basis model 2	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for the last day of February whose day of the month value shall be adapted to the value of the first day of the interest period if the latter is higher and if the period is one of a regular schedule. This means that a 31st is assumed to be a 30th and the 28th Feb of a non-leap year is assumed to be equivalent to a 29th Feb when the first day of the interest period is a 29th, or to a 30th Feb when the first day of the interest period is a 30th or a 31st. The 29th Feb of a leap year is assumed to be equivalent to a 30th Feb when the first day of the interest period is a 30th or a 31st. Similarly, if the coupon period starts on the last day of February, it is assumed to produce only one day of interest in February as if it was starting on a 30th Feb when the end of the period is a 30th or a 31st, or two days of interest in February when the end of the period is a 29th, or 3 days of interest in February when it is the 28th Feb of a non-leap year and the end of the period is before the 29th.
A013	30E3/360 or Eurobond basis model 3	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that a 31st is assumed to be a 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be equivalent to a 30 Feb. It is a variation of the 30E/360 (or Eurobond basis) method where the last day of February is always assumed to be a 30th, even if it is the last day of the maturity coupon period.
A014	Actual/365NL or Actual/365 No Leap	Method whereby interest is calculated based on the actual number of accrued days in the interest period, excluding any leap day from the count, and a 365-day year.
OTHR	Other	Other method than A001-A014. See Narrative.

Codes

If Qualifier is REVA and Data Source Scheme is not present, Indicator must contain one of the following codes (Error code(s): K22):

REVY	Revaluation	Revaluation of collateral position should be performed.
REVN	No Revaluation	No revaluation of collateral position should be performed.

Codes

If Qualifier is LEGA and Data Source Scheme is not present, Indicator must contain the following code (Error code(s): K22):

FRAN	Pension Livrée	Relates to the French legal framework for repos, that is, relates to a "Pension Livrée".
